I-I

2410001: MATRICES AND CALCULUS
(CSE, CSD, CSM, ECE, EEE, MECH, CIVIL)

B.Tech. I Year I Sem

L T P C

3 1 0 4

Course Overview:

Matrix algebra and calculus are essential for understanding and solving complex problems in many scientific and engineering fields. This course provides the mathematical foundation for advanced topics and applications. This course covers matrix theory, linear algebra and calculus. Linear algebra is a branch of mathematics that studies system of linear equations and the properties of matrices. The calculus part of the course typically covers differential and its applications, and integration techniques. Matrix algebra allows us to think of a matrix holistically, generalize and compute derivatives important matrix factorizations, understand how differentiation formulas must be reimaged in large scale computing. Calculus is used to model and solve real- world problems.

Pre-requisites: Mathematics courses of 10+2 year of study.

Course Objectives: The student will try to learn

- Types of matrices and their properties, concept of a rank of the matrix and applying this concept to know the consistency and solving the system of linear equations.
- Concept of eigen values, eigenvectors and reduction of quadratic form to canonical form by orthogonal transformation.
- Geometrical approach to the mean value theorems and their application to the mathematical problems. Evaluation of improper integrals using Beta and Gamma functions.
- Partial differentiation, concept of total derivative and finding maxima and minima of function of two and three variables.
- Evaluation of multiple integrals and their applications.

Course outcomes: After successful completion of the course, students should be able to

CO1: Write the matrix representation of a set of linear equations and to analyses the solution of the system of equations.

CO2: Find the Eigen values and Eigenvectors and reduce the quadratic form to canonical form using orthogonal transformations.

CO3: Solve the applications on mean value theorems and evaluate improper integrals using Beta and Gamma functions.

CO4: Find the extreme values of functions of two variables with/ without constraints.

CO5: Evaluate the multiple integrals and apply the concept to find areas, volumes.

UNIT-I: Matrices

10 L

Rank of a matrix by Echelon form and Normal form, Inverse of Non-singular matrices by Gauss-Jordan method, System of linear equations: Solving system of Homogeneous and Non-Homogeneous equations, L-Udecomposition method.

UNIT-II: Eigen values and Eigenvectors**10 L**

Eigen values, Eigen vectors and their properties (without proof), Diagonalization of a matrix, Cayley-Hamilton Theorem (without proof), finding inverse and power of a matrix by Cayley-

Hamilton Theorem, Quadratic forms and Nature of the Quadratic Forms, Reduction of Quadratic form to canonical forms by Orthogonal Transformation.

UNIT-III: Calculus**8 L**

Mean value theorems: Rolle's Theorem, Lagrange's Mean value theorem with their Geometrical Interpretation and applications, Cauchy's Mean value Theorem, Taylor's Series (without proofs).

Beta and Gamma functions and their applications (properties without proof).

UNIT-IV: Multivariable Calculus (Partial Differentiation and applications)**10 L**

Partial Differentiation: Euler's Theorem, Total derivative, Jacobian, Functional dependence-

independence. Applications: Maxima and minima of functions of two variables and three variables using method of Lagrange multipliers.

UNIT-V: Multi variable Calculus (Integration)**10 L**

Evaluation of Double Integrals (Cartesian and polar coordinates), change of order of integration (only Cartesian form), Evaluation of Triple Integrals, Change of variables (Cartesian to polar) for double and triple integrals (Cartesian to Spherical and Cylindrical polar coordinates).

Applications: Areas (by double integrals) and volumes (by triple integral).

2420008: APPLIED PHYSICS

B.Tech. I Year I. Sem.

L T P C
3 1 0 4

Course Overview

Applied Physics is the application of the Physics to solve Scientific or Engineering Problems. It is considered as bridge between Physics and Engineering.

Applied Physics under graduate program stress the basic Physics that underlies most developments in engineering and mathematical tools that are important to engineers.

Prerequisites: 10 + 2 Physics

Course Objectives: The student will try to learn :

1. Understand the basic principles of quantum physics and band theory of solids.
2. Understand the underlying mechanism involved in construction and working principles of various semiconductor devices.
2. Study the fundamental concepts related to the dielectric, magnetic materials.
3. Identify the importance of nanoscale, quantum confinement and various fabrications techniques.
5. Study the characteristics of lasers and optical fibers.

Course Outcomes: After successful completion of the Course the students should be able to

1. Understand physical world from fundamental point of view by the concepts of Quantum mechanics and visualize the difference between conductor, semiconductor, and an insulator by classification of solids.
2. Identify the role of semiconductor devices in science and engineering Applications.
3. Explore the fundamental properties of dielectric, magnetic materials and their applications.
4. Appreciate the features and applications of Nano materials.
5. Understand various aspects of Lasers and Optical fiber and their applications in diverse fields.

UNIT - I: QUANTUM PHYSICS AND SOLIDS

Quantum Mechanics: Introduction to quantum physics, Blackbody radiation, Photoelectric effect, de-Broglie Hypothesis and matter waves, Davisson and Germer experiment, Heisenberg uncertainty principle, Born interpretation of the wave function, Time independent Schrodinger wave equation, Particle in one dimensional potential box.

Solids: Free electron theory (Drude & Lorentz, Sommerfeld), Bloch's theorem -Kronig-Penney model, Effective mass of electron, Origin of energy bands, Classification of solids.

UNIT - II: SEMICONDUCTORS AND DEVICES

Intrinsic and extrinsic semiconductors, Hall effect, Direct and Indirect band gap semiconductors, Construction, principle of operation and characteristics of P-N Junction diode, Zener diode and Bipolar junction transistor (BJT)

Opto-devices- Light emitting diode (LED), PIN diode, and Solar cell, their structure, materials, working principle and characteristics, Solar cell application- Space craft.

UNIT - III: DIELECTRIC AND MAGNETIC MATERIALS

Dielectric Materials: Introduction to dielectrics, Polarization, Permittivity, Dielectric constant, Types of polarizations (Qualitative), Internal field in Solids, Clausius-Mossotti equation, Ferroelectric, Piezoelectric and Pyroelectric materials, Applications.

Magnetic Materials: Introduction to Magnetism, Magnetization, Permeability, Susceptibility, Classification of Magnetic Materials, Hysteresis curve, Soft and Hard magnetic materials, Magnetostriction, Magneto resistance, Magnetic field sensors and bubble memory devices.

UNIT - IV: NANOTECHNOLOGY

Nanoscale, Quantum confinement, Surface to volume ratio, Bottom-up fabrication: Sol-gel, Precipitation methods, Top-down fabrication: Ball milling, Physical Vapor Deposition (PVD), Characterization techniques - XRD, SEM and TEM, Applications of nanomaterials.

UNIT - V: LASER AND FIBER OPTICS

Lasers: Laser beam characteristics-three quantum processes-Einstein coefficients and their relations, Lasing action, Population inversion, Pumping methods, Ruby laser, He-Ne laser, CO₂ laser, Applications of laser- Medical and Military.

Fiber Optics: Introduction to optical fiber, Total internal reflection, Construction of optical fiber, Acceptance angle, Numerical aperture, Classification of optical fibers, Losses in optical fiber, Optical fiber for communication system, Applications of optical fiber-Endoscopy.

24X0501:Problem Solving Using C and C++

I B.Tech. I – Sem.

L T P C

3 0 0 3

Course Overview:

The Course Provides good foundation in procedural oriented and object-oriented programming concepts. It provides overview on basic building blocks of procedural oriented concepts like arrays, pointers, structures, strings. It comprises object-oriented concepts such as information hiding, encapsulation, inheritance and polymorphism. C programming is used in operating systems, embedded devices, OS kernels, drivers, IoT applications. C++ is widely used for creating graphics-heavy software, game engines, VR applications, and web browsers.

Prerequisites: Nil

Course Objectives: The students will try to learn

- Using of structured programming approach in solving problems
- How to use arrays, pointers, strings and structures in solving problems
- Defining of structures in C and classes in C++
- Importance of inheritance in object-oriented programming
- Handling of exceptions in programs

Course Outcomes: After successful completion of the course, students should be able to

- Develop programs using Control statements and Repetitive statements
- Modularize the code with functions so that they can be reused
- Learn about Object oriented concepts
- Design programs by using Inheritance concepts
- Implement polymorphism and Exception Handling

Module-I: Introduction to programming

[10]

Introduction Procedure Oriented and Object-Oriented Programming. Algorithm, Flowchart, Pseudo code. Creating and Running of C Program. Structure of C program – C character set, C Tokens: Constants, Variables, Keywords, Identifiers, C data types, C operators. Standard I/O in C (scanf, printf), Conditional Control statements (if and Switch) Statements. Repetitive statements: While, Do While and For Loops - Use of Break and Continue Statements.

Module-II : Functions, Arrays, Strings and Pointers

[12]

Arrays: Introduction, Declaration, Creating and Accessing of One-Dimensional Arrays, Two- Dimensional Arrays.

Strings and Pointers: Introduction to strings, string handling functions, Arrays of strings, Introduction to pointers, Dynamic Memory allocation.

Functions: Defining Functions – User Defined Functions, Storage Classes, passing parameters: Call By Value, Call By Reference, Recursion, Command-line Arguments.

Module-III : Structures and Classes

[8]

Structures: Defining structures, initializing structures, unions, Array of structures

OOPS Concepts: Class, Object, Abstraction, Encapsulation, Inheritance and Polymorphism.

C++ Classes and Data Abstraction: Class definition, Class structure, Class objects, Class scope, this pointer, Friends to a class, Static class members, Constant member functions, Constructors and Destructors, Dynamic creation and destruction of objects, Data abstraction.

Module – IV: Inheritance

[7]

Inheritance: Defining a class hierarchy, Different forms of inheritance, Defining the Base and Derived classes, Access to the base class members, Base and Derived class construction, Destructors, Virtual base class.

Module –V : Polymorphism and Exception Handling

[8]

Virtual Functions and Polymorphism: Static and Dynamic binding, virtual functions, Dynamic binding through virtual functions, Virtual function call mechanism, Pure virtual functions, Abstract classes, Implications of polymorphic use of classes, Virtual destructors.

Exception handling: Try, throw and catch.

TEXTBOOKS:

24X0010: ENGLISH FOR SKILL ENHANCEMENT

B.Tech. I Year. I Sem.

L T P C

3 0 0 3

Course Overview:

1. The English language plays a vital role in engineering education. Acquiring LSRW skills has become a prerequisite to learning about different technologies and their intricacies.
2. All these extracts are fascinating, thought-provoking, and contextual to engineering students. The authors have sincerely tried connecting every lesson with the modules of vocabulary, grammar, reading comprehension and writing tasks stipulated under each module. The textbook includes several exercises and activities involving the student's language skills practice. They are extremely encouraging and motivational and cater to a group of students with mixed abilities.
3. Each module starts with the preparatory task which can stimulate an interesting discussion among the students in the classroom. Adequate explanations and more examples are provided in vocabulary and grammar sections to enable students to work independently in and outside the classroom. The reading part suggests improving students' reading skills and provides reading comprehension exercises. The writing module aims at developing the learner's writing skills by providing conceptual discussions and exercises in different forms of written communication such as formal letters, CV/ résumé and job application letters, e-mails, reports, etc.

Prerequisites: Language Comprehension

Course Objectives: The students will try to learn:

1. Improve the language proficiency of students in English with an emphasis on Vocabulary, Grammar, Reading and Writing skills.
2. Develop study skills and communication skills in various professional situations.
3. Equip students to study engineering subjects more effectively and critically using the theoretical and practical components of the syllabus.

Course Outcomes: After successful completion of the course, students should be able to:

1. Understand the importance of vocabulary and sentence structures.
2. Choose appropriate vocabulary and sentence structures for their oral and written communication.
3. Demonstrate their understanding of the rules of functional grammar.
4. Develop comprehension skills from the known and unknown passages.
5. Take an active part in drafting paragraphs, letters, essays, abstracts, précis and reports in various contexts.

MODULE – I (No of Hours = 7)

Chapter entitled '*Toasted English*' by R.K. Narayan from "*English: Language, Context and Culture*" published by Orient BlackSwan, Hyderabad.

Vocabulary: The Concept of Word Formation -The Use of Prefixes and Suffixes - Acquaintance with Prefixes and Suffixes from Foreign Languages to Form Derivatives - Synonyms and Antonyms

Grammar: Identifying Common Errors in Writing concerning Articles and Prepositions.

Reading: Reading and Its Importance- Techniques for Effective Reading.

Writing: Sentence Structures -Use of Phrases and Clauses in Sentences- Importance of Proper Punctuation- Techniques for Writing precisely – Paragraph Writing – Types, Structures and Features of a Paragraph - Creating Coherence- Organizing Principles of Paragraphs in Documents.

MODULE – II (No of Hours = 6)

Chapter entitled '*Appro JRD*' by Sudha Murthy from "*English: Language, Context and Culture*" published by Orient BlackSwan, Hyderabad.

Vocabulary: Words Often Misspelt - Homophones, Homonyms and Homographs

Grammar: Identifying Common Errors in Writing concerning Noun-pronoun Agreement and Subject-verb Agreement.

Reading: Sub-Skills of Reading – Skimming and Scanning – Exercises for Practice

Writing: Nature and Style of Writing- Defining /Describing People, Objects, Places and Events – Classifying- Providing Examples or Evidence.

MODULE – III (No of Hours = 7)

The chapter entitled ‘**Lessons from Online Learning**’ by **F.Haider Alvi, Deborah Hurst et al** from

“**English: Language, Context and Culture**” published by Orient BlackSwan, Hyderabad. **Vocabulary:** Words Often Confused - Words from Foreign Languages and their Use in English. **Grammar:** Identifying Common Errors in Writing Concerning Misplaced Modifiers and Tenses.

Reading: Sub-Skills of Reading – Intensive Reading and Extensive Reading – Exercises for Practice **Writing:** Format of a Formal Letter-Writing Formal Letters E.g., Letter of Complaint, Letter of Requisition, Email Etiquette, Job Application with CV/Resume.

MODULE – IV (No of Hours = 6)

Chapter entitled ‘**Art and Literature**’ by **Abdul Kalam** from “**English: Language, Context and Culture**” published by Orient BlackSwan, Hyderabad.

Vocabulary: Standard Abbreviations in English

Grammar: Redundancies and Clichés in Oral and Written Communication.

Reading: Survey, Question, Read, Recite and Review (SQ3R Method) - Exercises for Practice

Writing: Writing Practices- Essay Writing-Writing Introduction and Conclusion -Précis Writing.

MODULE – V (No of Hours = 6)

Chapter entitled ‘**Go, Kiss the World**’ by **Subroto Bagchi** from “**English: Language, Context and Culture**” published by Orient BlackSwan, Hyderabad.

Vocabulary: Technical Vocabulary and their Usage

Grammar: Common Errors in English (*Covering all the other aspects of grammar which were not covered in the previous modules*)

Reading: Reading Comprehension-Exercises for Practice

Writing: Technical Reports- Introduction – Characteristics of a Report – Categories of Reports Formats- Structure of Reports (Manuscript Format) -Types of Reports - Writing a Report.

Note: *Listening and Speaking Skills which are given under Module 6 in the AICTE Model Curriculum are covered in the syllabus of the ELCS Lab Course.*

- **Note: 1.** As the syllabus of English given in AICTE *Model Curriculum-2018 for B.Tech First Year is **Open-ended***, besides following the prescribed textbook, it is required to prepare teaching/learning materials **the teachers collectively** in the form of handouts based on the needs of the students in their respective colleges for effective teaching/learning in the class.
- **Note: 2.** Based on the recommendations of NEP2020, teachers are requested to be flexible in adopting Blended Learning in dealing with the course contents. They are advised to teach 40 per cent of each topic from the syllabus in blended mode.

24X0372: ENGINEERING WORK SHOP (Common to all branches)

B.Tech.I Year.I Semester

L T P C
0 1 4 3

Course Overview: After successful completion of the course, students should be able to learn.

Engineering Workshops: A foundational course aimed at introducing first-year students to a variety of tools, equipment, and techniques essential for creating physical objects and mechanisms using different materials. This course provides an opportunity for students to build confidence and gain practical experience in carpentry, fitting, house wiring, tin-smithy, black smithy, welding, and principles of modern manufacturing processes.

Prerequisite: NIL

Course Objective: The student will be able to

1. To gain good basic working knowledge required for the production of various engineering products.
2. To study different tool uses and their demonstration.
3. To provide hands on experience about use of different engineering materials, tools, equipments and processes those are common in engineering field.
4. To develop a right attitude, team working, precision and safety at work place.
5. It explains the construction, function use and application of different working tools and equipments.

Course outcomes: At the end of the course students should be able to

1. Explain the design and model different prototypes in the trade of carpentry such as Cross lap joint, Dove tail joint.
2. Demonstrate the design and model various basic prototypes in the trade of fitting such as straight fit and V-fit.
3. Understand to make various basic prototypes in the trade of tin smithy such as rectangular tray and open cylinder.
4. Demonstrate the design and model various basic prototype in welding and black smithy.
5. Understand to perform various basic house wiring techniques such as connecting one lamp with one switch, connecting two lamps with one switch.

Course content:

Module -I: CARPENTRY AND FITTING

- Carpentry – Introduction, Carpentry tools, sequence of operations and applications (T-Lap Joint, Dovetail Joint, Mortise & Tenon Joint)
- Fitting – Introduction, fitting tools, sequence of operations and applications (V-Fit, Dovetail Fit & Semi-circular fit)

Module -II: TIN SMITHY AND BLACKSMITHY

- Tin-Smithy – Introduction, Tin smithy tools, sequence of operations and applications (Square Tin, Rectangular Tray & Conical Funnel).
- Blacksmithy- Introduction, Blacksmithy tools, sequence of operations and applications (Round to Square, Fan Hook and S-Hook)

Module -III: HOUSE WIRING AND WELDING

- House-wiring – Introduction, Electrical wiring tools, sequence of Operations and applications (Parallel & Series, Two-way Switch and Tube Light)
- Welding Practice – Introduction, electrode, welding tools, and sequence of Operations. Advantages and applications (Arc Welding).

24X00071: APPLIED PHYSICS LAB

B.Tech. I Year I Sem.

L	T	P	C
0	0	3	1.5

Course Objectives: The objectives of this course for the student to

1. Capable of handling instruments related to the Hall effect and photoelectric effect
Experiment understands their measurements.
2. Understand the characteristics of various devices such as PN junction diode, Zener diode, BJT, LED, solar cell, lasers and optical fiber and measurement of energy gap.
3. Apply the analytical techniques & graphical analysis for Stewart Gees , LCR & RC .
4. Understanding the method of least squares fitting.
5. To develop intellectual communication skills through discussion on basic principles of scientific concepts in a group.

Course Outcomes: The students will be able to:

1. Know the determination of the Planck's constant using Photo electric effect and identify the material whether it is n-type or p-type by Hall experiment.
2. Appreciate quantum physics in semiconductor devices and optoelectronics.
3. Gain the knowledge in calculating the quality factor and time constant of LCR and RC circuits.
4. Understand the variation of magnetic field at various points.
5. Carried out data analysis.

LIST OF EXPERIMENTS:

1. Determination of work function and Planck's constant using photoelectric effect.
2. Determination of Hall co-efficient and carrier concentration of a given semiconductor.
3. Characteristics of series and parallel LCR circuits.
4. V-I characteristics of a p-n junction diode and Zener diode.
5. Input and output characteristics of BJT (CE, CB & CC configurations).
6. V-I and L-I characteristics of light emitting diode (LED) and LASER.
7. V-I Characteristics of solar cell.
8. Determination of Energy gap of a semiconductor.
9. To determine the time constant of R-C circuit.
10. Determination of Acceptance Angle and Numerical Aperture of an optical fiber.
11. Understanding the method of least squares – Torsional pendulum as an example.
12. Determination of magnetic field induction along the axis of a current carrying coil.

24X0571:Problem Solving Using C and C++ Laboratory

I B.Tech. I – Sem.

L	TP	C
0	0	2
		1

Course Overview:

The Course Provides good foundation in procedural oriented and object-oriented programming concepts. It provides overview on basic building blocks of procedural oriented concepts like arrays, pointers, structures, strings. It comprises object-oriented concepts such as information hiding, encapsulation, inheritance and polymorphism. C programming is used in operating systems, embedded devices, OS kernels, drivers, IoT applications. C++ is widely used for creating graphics-heavy software, game engines, VR applications, and web browsers.

Prerequisites: Nil

Course Objectives: The students will try to learn

- Using of structured programming approach in solving problems
- How to use arrays, pointers, strings and structures in solving problems
- Defining of structures in C and classes in C++
- Importance of inheritance in object-oriented programming
- Handling of exceptions in programs

Course Outcomes: After successful completion of the course, students should be able to

- Develop programs using Control statements and Repetitive statements
- Modularize the code with functions so that they can be reused
- Learn about Object oriented concepts
- Design programs by using Inheritance concepts
- Implement polymorphism and Exception Handling

Week 1: Algorithm and Flowchart

1. You are designing a flowchart and algorithm for a distance and speed calculator. The flowchart should prompt the user to input the distance traveled and the time taken and calculate the speed using the formula: **Speed = Distance / Time**.
2. You are developing an algorithm and flowchart for a circle area calculator. The flowchart should prompt the user to input the radius of a circle and calculate the area using the formula: **Area = πr^2**
3. You are designing an algorithm and flowchart for a fuel efficiency calculator in a car rental app. The flowchart should prompt the user to input the distance traveled and the amount of fuel consumed and calculate the fuel efficiency in miles per gallon (MPG) using the formula **MPG = Distance / Fuel Consumption**.
4. You are developing an algorithm and flowchart for a discount calculator in an online shopping app. The flowchart should prompt the user to input the original price and the discount percentage and calculate the discounted price using the formula: **Discounted Price = Original Price - (Original Price * Discount Percentage /100)**.

5. You are developing a flowchart and algorithm for a monthly budget tracker. The flowchart should prompt the user to input their income and expenses and calculate the total savings using the formula **Total Savings = Income - Total Expenses**.
6. You are designing a flowchart for a loan amortization calculator. The flowchart should prompt the user to input the loan amount, interest rate, and duration, and calculate the monthly payment using the formula $\text{Monthly Payment} = (\text{Loan Amount} * \text{Interest Rate} * (1 + \text{Interest Rate})^{\text{Duration}}) / ((1 + \text{Interest Rate})^{\text{Duration}} - 1)$.
7. You are developing a flowchart and algorithm for a construction materials calculator. The Flow chart should guide the user through the process of inputting the dimensions of a room, including the length, width, and height. The goal is to calculate the surface area of the room using the provided formula:

$$\text{Surface Area} = 2 * (\text{Length} * \text{Width} + \text{Length} * \text{Height} + \text{Width} * \text{Height}).$$
8. Develop a flowchart and an algorithm to convert a given time in hours and minutes to minutes only. Prompt the user to input the time in hours and minutes and display the converted time in minutes.

Skill Oriented Exercise

9. Farmer Thimmayya bought some mules at Rs. 50 each, sheep at Rs. 40 each, goats at Rs. 25 each, and pigs at Rs. 10 each. The average price of the animals per head worked to Rs. 30. What is the minimum number of animals of each kind did he buy?
10. **A Matter of Rupees and Paisa:** I have money pouch containing Rs.700. There are equal number of 25 paise coins, 50 paise coins and 1 rupee coins. How many of each are there.
11. Develop an algorithm and flowchart that prompts the user to input the initial velocity, acceleration, and time. Calculate and display the final velocity using the formula $\text{Final Velocity} = \text{Initial Velocity} + (\text{Acceleration} * \text{Time})$.
12. Develop an algorithm and flowchart that prompts the user to input the lengths of the three sides of a triangle. Calculate and display the area of the triangle using Heron's formula: $\text{Area} = \sqrt{(s * (s - \text{Side1}) * (s - \text{Side2}) * (s - \text{Side3}))}$, where $s = (\text{Side1} + \text{Side2} + \text{Side3}) / 2$.

Week 2: Algorithm and Flowchart

1. ABC Company wants to calculate the monthly salary for its employees based on various components such as basic pay, DA, HRA, and deductions for taxes and provident fund. The company follows the following rules for salary calculation:
 - The basic pay is a fixed amount each employee receives.
 - DA is calculated as 20 percentage of the basic pay.
 - HRA is calculated as 10percentage of the basic pay.
 - The gross salary is the sum of the basic pay, DA, and HRA.
 - The net salary is the gross salary minus deductions for taxes and provident fund.

Develop an algorithm and flowchart to calculate the gross and net salary of the employee. Include the necessary steps to calculate the net salary.

2. Sarah, a dedicated student, wants to calculate her average grade for a semester. She has received marks in four different subjects and seeks assistance in creating an algorithm to determine her average grade based on these marks. Develop an algorithm and flowchart to help Sarah calculate her average grade for the semester using the marks obtained in these four subjects. Ensure that the algorithm includes the necessary steps to compute the average grade accurately.
3. John is a programmer who wants to convert a given temperature in Celsius to Fahrenheit. Help John in developing an algorithm and flowchart to perform this conversion. Design an algorithm for John to convert a given temperature in Celsius to Fahrenheit. Provide step-by-step instructions for performing the conversion.
4. **The Tall Men Next Door:** Next door to me live four brothers of different heights. Their average height is 74 inches, and the difference in height among the first three men is two inches. The difference between the third and the fourth man is six inches. Can you tell how tall each brother is?
5. **Driving Through the Country:** I decided to travel through the country leisurely and on the first day I did only 7 miles. On the last day I did 51 miles, increasing my journey by 4 miles per day. How many days did I travel and how far?
6. There is a beautiful pond in a park, filled with clear water. The park management wants to monitor the water level in the pond regularly to ensure it remains at an optimal level. They have asked you to create an algorithm to help them with this task. Develop an algorithm and flowchart to monitor the water level in the pond and notify the park management if it falls below a certain threshold. (Note: You can assume that the input for the current water level and threshold level is obtained from a monitoring device or sensor).
7. If a participant can make one submission every 45 seconds, and a contest lasts for Y minutes, create an algorithm and flowchart to find the maximum number of submissions that the participant can make during the contest? Assume the participant is allowed to make submissions until the last second of the contest.

Skill Oriented Exercise

8. Michael wants to find the largest number among a set of given numbers. Help Michael write an algorithm to determine the largest number from the given inputs. Create an algorithm and flowchart for Michael to find the largest number among a set of given inputs. Provide step-by-step instructions to identify the largest number.
9. A construction worker needs to paint the exterior walls of a rectangular building. The dimensions of the walls are L meters in length, H meters in height, and W meters in width. If the cost of painting is Rs. 20 per square meter, what will be the total cost of painting the walls? Prepare an algorithm and flowchart to calculate the total cost of painting.
10. An ice cream vendor brings 'i' litre of ice cream to a fair. Each cone requires 0.25 liters

of ice cream. If the vendor sells 80 cones, Develop an algorithm and flowchart to find the number of liters of ice cream left with the vendor.

11. Amanda is planning a party and wants to determine the total number of guests attending. Assist Amanda by writing an algorithm to calculate the total number of guests based on the number of adults and children invited. Create an algorithm and flowchart for Amanda to calculate the total number of guests attending her party, considering the number of adults and children invited. Include the necessary steps to calculate the total number of guests.

Week: 3 Data Types, Console I/O, Operators Storage Classes

1. You are working as a financial analyst at a bank. As part of your job, you need to calculate the maturity amount for fixed deposits (FD) based on the principal amount, interest rate, and duration. For that help me to write a C program that takes the principal amount, interest rate, and duration (in years) as input from the user. Calculate and display the maturity amount using the simple interest formula: $\text{Maturity Amount} = \text{Principal} + (\text{Principal} * \text{Interest Rate} * \text{Duration})$.
2. Jenny, a budding mathematician, was studying the concept of area and perimeter. She was given a rectangular garden with a known length and width. Jenny wondered if she could find the area without knowing the width. Can you help Jenny derive a formula to calculate the area of a rectangle using only the length and perimeter?
3. Develop a C program that computes the hypotenuse of a right-angled triangle given the lengths of its two perpendicular sides. Prompt the user to enter the lengths and display the result. (Pythagorean theorem: $\text{Hypotenuse}^2 = \text{Side1}^2 + \text{Side2}^2$)
4. Once upon a time, there was a mathematician named Alex. Alex loved solving mathematical problems and puzzles. One day, Alex came across an ancient scroll that contained a secret formula to calculate the sum of the first n natural numbers. The scroll mentioned that by using the formula, one could find the sum of any given number of natural numbers without having to manually add them up. Alex was intrigued and decided to test the formula. Can you help Alex implement a C program that uses the formula to calculate the sum of the first n natural numbers?

Instructions:

Write a C program that takes an input integer n from the user and calculates the sum of the first n natural numbers using the formula: $\text{sum} = (n * (n + 1)) / 2$

5. Once upon a time in a small town, there were two friends, Kavi and Jei, who were fascinated by the concept of slopes in mathematics. They loved exploring the hills and valleys around their town and wondered how they could calculate the slope of any given landscape. One sunny day, while hiking up a hill, Kavi and Jei discovered an ancient map that had the secret to finding the slope of a line between two points. The map indicated that by using the coordinates of two points, they could determine the slope of the line connecting them. Excited about their discovery, Kavi and Jei decided to create a C program that could calculate the slope for any two points. They wanted to share their program with others so that everyone could explore the slopes of various landscapes. Can you help Kavi and Jei bring their idea to life by implementing a C program that calculates the slope of a line?

Instructions:

Write a C program that prompts the user to enter the coordinates of two points: (x1, y1) and (x2, y2). The program should then

Calculate, the slope of the line connecting these points using the formula: $\text{slope} = (y2 - y1) / (x2 - x1)$

Finally, the program should display the calculated slope to the user.

6. Ravi and Kavi are on an exciting treasure hunt adventure, following a map with hidden treasures located at different coordinates. They want to calculate the distance between two treasures to determine how far apart they are. Can you help them by writing a C program that performs this calculation?

Instructions:

Write a C program that prompts the user to enter the coordinates of two treasures: Treasure A and Treasure B. The coordinates should be in the form (x, y). Calculate the distance between the treasures using the distance formula:

$$\text{distance} = \text{sqrt}((x2 - x1)^2 + (y2 - y1)^2)$$

Finally, output a message indicating how far apart the treasures are.

7. Imagine a scenario where there is a coconut tree with multiple coconuts hanging from it. There is a person standing at a distance of "D" meters away from the tree. The coconuts are positioned at a height of "H" meters from the ground. Could you please help write a C program that calculates the angle at which the person should aim in order to hit the coconuts? (Hint: you can use the inverse tangent function (atan() in C) to determine the angle based on the ratio of the height of the coconuts to the distance from the tree.)

Skill Oriented Exercise

8. In a faraway kingdom, two treasure hunters named Alex and Bella embarked on a daring quest to find valuable treasures. While exploring a mysterious cave, they stumbled upon two treasure chests, each containing a unique gemstone. Curiosity took over, and they decided to swap the gemstones inside the chests. However, a magical enchantment prevented them from directly swapping the gemstones. To fulfill their quest and restore the treasures to their rightful chests, Alex and Bella realized they could use a third variable and arithmetic operations. Can you help them by writing a C program that takes the values of the gemstones as input, and swap their values.
9. Emily, a young architect, was working on designing a cylindrical water tank for a new building. As she was finalizing the plans, she needed to calculate the surface area of the cylinder to determine the amount of material required for its construction. However, she was unsure of the exact formula and the steps involved in the calculation. Can you help Emily by writing a C program that assists her in calculating the surface area of a cylinder? (Surface Area = $2\pi r^2 + 2\pi rh$)
10. Hemanth is an architect who wants to design a garden with a beautiful polygon-shaped fountain at its center. He needs to calculate the area of the polygon so that he can determine the appropriate size for the fountain. Help Hemanth by writing a C program that calculates the area of a regular polygon when given the number of sides and the length of each side.

$$\text{Area} = (\text{numSides} * \text{sideLength} * \text{sideLength}) / (4 * \tan(\pi / \text{numSides}))$$

11. Prathima loves ice cream cones and wants to decorate the surface of her favorite ice cream cone with colorful stickers. To know how many stickers she needs, she wants to calculate the surface area of the cone. Help Prathima by writing a C program that calculates the surface area of a cone when given the radius of the base and the slant height, (Surface Area = $\pi * r * (r + l)$)

12. RIGHT FOOT FORWARD: A short man takes three steps to a tall man's two steps. They both start out on the left foot. How many steps do they have to take before they are both stepping out on the right foot together?

Week: 4 Data Types, Console I/O, Operators Storage Classes

PREDICT THE OUTPUT:

1. #include <stdio.h> **Output:**
 int main() {
 int a = 5; float b = 3.5;
 int result = a + b; printf("%d\n", result); return 0;
 }

2. #include <stdio.h> **Output:**
 int main() { int a = 10; int b = 20;
 int result = a * b / 4 % 3; printf("%d\n", result); return 0;
 }

3. #include <stdio.h> **Output:**
 int main() { int a = 15; int b = 10;
 int result = (a > b) && (b != 0); printf("%d\n", result);
 return 0;
 }

4. #include <stdio.h> **Output:**
 int main() { int a = 10; int b = 5;
 int result = (a > b) || (a == 10); printf("%d\n", result);
 return 0;
 }

5. #include <stdio.h> **Output:**
 int main() {
 int x = 3, y = 2;
 int result = x * y - y / x % y; printf("%d\n", result); return 0;
 }

6. #include <stdio.h> **Output:**
 int main() { int x = 5;
 int *ptr1 = &x;
 int **ptr2 = &ptr1; printf("%d\n", **ptr2); return 0;
 }

7. #include <stdio.h> **Output:**
int main() { int x = 5;
int *ptr1, *ptr2; ptr1 = &x;
ptr2 = ptr1; printf("%d\n", *ptr2); return 0;
}

8. #include <stdio.h> **Output:**
int main() { int x = 51;
int *ptr = &x; printf("%d\n", *ptr); x = 15;
printf("%d\n", *ptr); return 0;
}

9. #include <stdio.h> **Output:**
int main() { float *ptr;
printf("Size of ptr: %lu bytes\n", sizeof(ptr)); return 0;
}

10. #include <stdio.h> **Output:**
int main() { double arr[5];
printf("Size of arr: %lu bytes\n", sizeof(arr)); return 0;
}

11. #include <stdio.h> **Output:**
int main() {
int x = 10; if (x > 5) {
printf("Hello\n");
}
printf("Goodbye\n"); return 0;
}

Skill Oriented Exercise

Find the syntax error, logical errors if any in the following code snippet:

1. #include <stdio.h> **Errors:**
int main() {
printf("Hello, KLU Family!\n") return 0;
}

2. #Include <stdio.h> **Errors:**
int main() {
int x = 5, y = 0; int result = x / y;
printf("The result is: %d\n", result); return 0;
}

3. #include <stdio.h> **Errors:**
int main() { int x = 5; int *ptr;
*ptr = &x; printf("%d\n", *ptr); return 0;

```
}
```

```
4.#include <stdio.h>
   int main() { int x = -5; if (x) {
     printf("x is not zero\n");
   } else
   {
     printf("x is zero\n");
   }
   return 0;
}
```

Errors:

Week 5: If else and Ternary Operator

1. Chef and Chefina are playing with dice. In one turn, both of them roll their dice at once. They consider a turn to be good if the sum of the numbers on their dice is greater than 6. Given that in a particular turn Chef and Chefina got X and Y on their respective dice, find whether the turn was good.
2. Chef has been working hard to compete in MasterChef. He is ranked X out of all contestants. However, only 10 contestants would be selected for the finals. Check whether Chef made it to the top 10 or not?
3. Apple considers any iPhone with a battery health of 80% or above, to be in *optimal* condition. Given that your iPhone has $X\%$ battery health, find whether it is in *optimal* condition.
4. In a classic chase, Tom is running after Jerry as Jerry has eaten Tom's favorite food. Jerry is running at a speed of X metres per second while Tom is chasing him at a speed of Y metres per second. Determine whether Tom will be able to catch Jerry. Note that initially Jerry is not at the same position as Tom.
5. Chef has started studying for the upcoming test. The textbook has N pages in total. Chef wants to read at most X pages a day for Y days. Find out whether it is possible for Chef to complete the whole book.
6. Chef has finally got the chance of his lifetime to drive in the *F1* tournament. But, there is one problem. Chef did not know about the 107% rule and now he is worried whether he will be allowed to race in the main event or not. Given the fastest finish time as X seconds and Chef's finish time as Y seconds, determine whether Chef will be allowed to race in the main event or not. Note that, Chef will only be allowed to race if his finish time is within **107%** of the fastest finish time.

Skill Oriented Exercise

7. Chef wants to host a party with a total of N people. However, the party hall has a capacity of X people. Find whether Chef can host the party.
8. Chef has to attend an exam that starts in X minutes, but of course, watching shows takes

priority. Every episode of the show that Chef is watching, is 24 minutes long. If he starts watching a new episode now, will he finish watching it **strictly before** the exam starts?

9. Chef has to travel to another place. For this, he can avail any one of two cab services.

- The first cab service charges X rupees.
- The second cab service charges Y rupees.

Chef wants to spend the **minimum** amount of money. Which cab service should Chef take?

10. Chef categorizes an Instagram account as *spam*, if, the *following* count of the account is more than 10 times the count of *followers*.

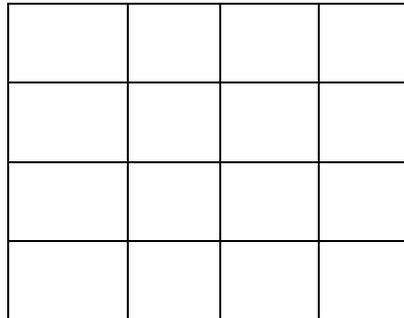

Given the *following* and *follower* count of an account as X and Y respectively, find whether it is a *spam* account.

11. Chef is watching TV. The current volume of the TV is X . Pressing the volume up button of the TV remote increases the volume by 11 while pressing the volume down button decreases the volume by 11. Chef wants to change the volume from X to Y . Find the minimum number of button presses required to do so.

12. Cities on a map are connected by a number of roads. The number of roads between each city is in an array and city 0 is the starting location. The number of roads from city 0 to city 1 is the first value in the array, from city 1 to city 2 in the second, and so on. How many paths are there from city 0 to the last city in the list, modulo 1234567?

13. Square within Square

Write a C program to determine the number of squares in the given illustration below

Week 6: Loops, Increment and Decrement operator

1. Sum of digits of five digit number.
Given the five digit number, print the sum of its digits.
Input
10564
Output
16
2. Write a program that takes two integers as input, start and end. The program should use for loop to iterate from start to end (both inclusive).
3. Write a C program that takes the input for multiple test cases. For each test case, the program should receive two integers, E and K, representing the energy at the lowest trophic level and the energy reduction factor, respectively. The program should calculate and output the maximum length of the food chain for each test case.
4. Write a program in C that takes an integer, n, as input, representing the number of multiplication tables to be generated. The program should output the multiplication table for each number from 1 to n, up to a multiple of 10.
5. Alice, Bob, and Charlie have different preferences for numbers. Alice likes numbers that are even and multiples of 7, while Bob prefers numbers that are odd and multiples of 9. They have found a number, A, and the task is to determine who takes it home.
Write a program that takes an integer, A, as input and outputs the person who takes the number home based on their preferences. If A is an even multiple of 7, Alice takes it home. If A is an odd multiple of 9, Bob takes it home. If neither Alice nor Bob likes the number, Charlie takes it home.
6. Chef owns a car that can run 15 kilometers using 1 litre of petrol. He wants to attend a programming camp at DAIICT, which is a distance of Y kilometers from his house. Chef currently has X litres of petrol in his car. The task is to determine whether Chef can attend the event at DAIICT and return to his home with the given amount of petrol. Write a program that takes two integers, X and Y, as input and outputs whether Chef can complete the round trip with the available petrol.

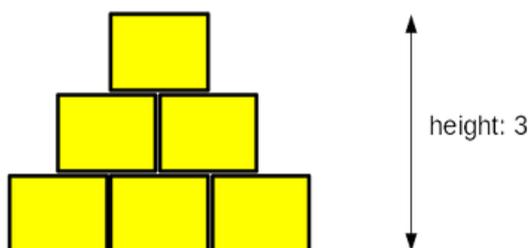

Skill Oriented Exercise

7. Listen to this story: a boy and his father, a computer programmer, are playing with wooden blocks. They are building a pyramid. Their pyramid is a bit weird, as it is actually a pyramid-shaped wall - it's flat. The pyramid is stacked according to one simple principle: each lower layer contains one block more than the layer above. The figure illustrates the rule used by the builders:

Note: the height is measured by the number of fully completed layers - if the builders don't have a sufficient number of blocks and cannot complete the next layer, they finish their work immediately.

Sample input: 6

Expected output: The height of the pyramid: 3 **Sample input: 1000**

blocks: 6

Expected output: The height of the pyramid: 44

8. The Special Number

There is a number whose double is greater than its half by 45. Can you find this number?

9. Chef is a student at a university, and the university has a requirement that students must be present for at least 75% of the working days in a semester to pass. The semester has a total of 120 working days. Chef has been taking a lot of holidays and is worried about meeting the attendance requirement. The information about the days Chef has attended or been absent is given as a sequence of N bits: B_1, B_2, \dots, B_N . If $B_i = 0$, it means Chef was absent on the i th day, and if $B_i = 1$, it means Chef was present on that day. The task is to determine if Chef can pass the attendance requirement by the end of the semester. Write a program that takes an integer N as input, followed by a sequence of N bits, and outputs whether Chef can hope to pass the attendance requirement or not.

10. There are N piles where the i^{th} pile consists of A_i stones. Chef and Chefina are playing a game taking alternate turns with Chef starting first. In his/her turn, a player can choose any non-empty pile and remove exactly 1 stone from it. The game ends when exactly 1 pile becomes empty. The player who made the last move wins. Determine the winner if both players play optimally.

11. Write the c program for following pattern

```
1 2 3 4 5
1 2 3 4
1 2 3
1 2
1
```

12. Write a program to obtain a number N and increment its value by 1 if the number is divisible by 4 otherwise decrement its value by 1.

Week 7: Arrays

1. Given a large integer represented as an integer array digits, where each $\text{digits}[i]$ is the i -th digit of the integer, ordered from most significant to least significant in left-to-right order (without any leading zeros), implement a program to increment the large integer by one and return the resulting array of digits.
2. Chef has set a target to solve at least 10 problems every week for a duration of 4 weeks. The input consists of four integers representing the number of problems Chef solved in each week (P1, P2, P3, and P4). The task is to determine the number of weeks in which Chef met his target. The output should be a single integer indicating the count of weeks where Chef solved at least 10 problems.
3. Code Chef recently revamped its practice page to make it easier for users to identify the next problems they should solve by introducing some new features: Recent Contest Problems - contains only problems from the last 2 contests Separate Un-Attempted, Attempted, and All tabs.
Problem Difficulty Rating - the recommended dropdown menu has various difficulty ranges so

that you can attempt the problems most suited to your experience Popular Topics and Tags. Like most users, Chef didn't know that he could add problems to a personal to-do list by clicking on the magic '+' symbol on the top-right of each problem page. But once he found out about it, he went crazy and added loads of problems to his to-do list without looking at their difficulty rating.

Chef is a beginner and should ideally try and solve only problems with difficulty rating strictly less than 1000. Given a list of difficulty ratings for problems in the Chef's to-do list, please help him identify how many of those problems Chef should remove from his to-do list, so that he is only left with problems of difficulty rating less than 1000.

4. You are given an array price where prices[i] is the price of a given stock on the ith day. You want to maximize your profit by choosing a single day to buy one stock and choosing a different day in the future to sell that stock. Return the maximum profit you can achieve from this transaction. If you cannot achieve any profit, return 0.
5. Given a non-empty array of integer's nums, every element appears twice except for one. Find that single one. You must implement a solution with a linear runtime complexity and use only constant extra space.
6. Given an array nums of size n, return the majority element. The majority element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array.
7. Write a C program to calculate the factorial of small positive integers. The input consists of an integer 't' representing the number of test cases, followed by 't' lines containing a single integer 'n' ($1 \leq n \leq 100$) for each test case. The output should display the factorial of 'n' on a separate line for each input value of 'n'.
8. (Puzzle)On the Way to Market One morning.
I was on my way to the market and met a man who had 4 wives. Each of the wives had 4 bags, containing 4 dogs and each dog had 4 puppies. Taking all things into consideration how many were going to the market?
9. Vasya likes the number 239. Therefore, he considers a number pretty if its last digit 2,3 or 9. Vasya wants to watch the numbers between L and R (both inclusive), so he asked you to determine how many pretty numbers are in this range. Can you help him?
10. You are participating in a contest which has 11 problems (numbered 1 through 11). The first eight problems (i.e. problems 1,2,...,8) are scorable, while the last three problems (9,10 and 11) are non-scorable — this means that any submissions you make on any of these problems do not affect your total score.
Your total score is the sum of your best scores for all scorable problems. That is, for each scorable problem, you look at the scores of all submissions you made on that problem and take the maximum of these scores (or 0 if you didn't make any submissions on that problem); the total score is the sum of the maximum scores you took. You know the results of all submissions you made. Calculate your total score.

Skill Oriented Exercise

11. Write a C program to help Joe and Lilly multiply two matrices, A and B. The program

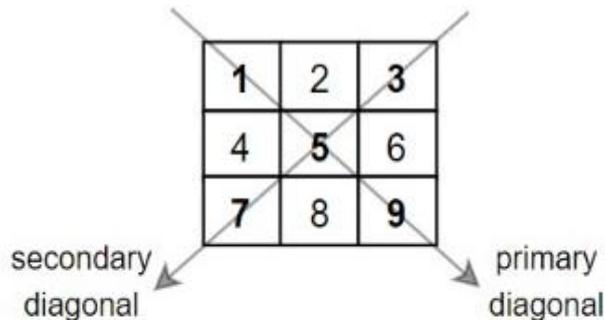

should take input for multiple test cases. For each test case, the program should read the dimensions and values of matrices A and B. If the multiplication is possible, the program should print the output matrix values. If the multiplication is not possible, the program should print "IMPOSSIBLE".

12. You are given an $m \times n$ integer matrix with the following two properties:
 Each row is sorted in non-decreasing order. The first integer of each row is greater than the last integer of the previous row. Given an integer target, return true if target is in matrix or false otherwise.

1	3	5	7
10	11	16	20
23	30	34	60

Input: matrix = [[1,3,5,7],[10,11,16,20],[23,30,34,60]], target = 3
 Output: true

13. You are given an $m \times n$ integer grid accounts where `accounts[i][j]` is the amount of money the *i*th customer has in the *j*th bank. Return the wealth that the richest customer has. A customer's wealth is the amount of money they have in all their bank accounts. The richest customer is the customer that has the maximum wealth.
14. Given a square matrix `mat`, return the sum of the matrix diagonals. Only include the sum of all the elements on the primary diagonal and all the elements on the secondary diagonal that are not part of the primary diagonal.

Input: mat = [[1,2,3],
 [4,5,6],
 [7,8,9]]

Output: 25

Explanation: Diagonals sum: 1 + 5 + 9 + 3 + 7 = 25
 Notice that element `mat[1][1] = 5` is counted only once.

15. Write a program to perform matrix multiplication. If Multiplication cannot be done for a given matrices then print "NOT POSSIBLE"

$$A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix} \quad B = \begin{pmatrix} 5 & 6 & 7 \\ 8 & 9 & 10 \end{pmatrix}$$

Multiplication of two matrixes:

$$A * B = \begin{pmatrix} 1*5 + 2*8 & 1*6 + 2*9 & 1*7 + 2*10 \\ 3*5 + 4*8 & 3*6 + 4*9 & 3*7 + 4*10 \end{pmatrix}$$

$$A * B = \begin{pmatrix} 21 & 24 & 27 \\ 47 & 54 & 61 \end{pmatrix}$$

Input:

- 1) Read the row & column size of matrix 1
- 2) Read the matrix 1
- 3) Read the row & column size of matrix 2
- 4) Read the matrix 2

Output:

Resultant Matrix.

Sample Input	Sample Output
2 2	7 10
1 2	15 22
3 4	
2 2	
1 2	
3 4	

16. Given two sorted arrays nums1 and nums2 of size m and n respectively, return the median of the two sorted arrays.

Input: nums1 = [1,3], nums2 = [2] Output: 2.00000

Explanation: merged array = [1,2,3] and median is 2.

17. Given a m x n grid filled with non-negative numbers, find a path from top left to bottom right, which minimizes the sum of all numbers along its path.

Note: You can only move either down or right at any point in time.

1	3	1
1	5	1
4	2	1

Input: grid = [[1,3,1],[1,5,1],[4,2,1]]

Output: 7

Explanation: Because the path 1 → 3 → 1 → 1 → 1 minimizes the sum.

18. Given an array nums of size n, return the majority element. The majority

element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array.

Input: nums = [3,2,3] Output: 3

19. Given a sorted array of distinct integers and a target value, return the index if the target is found. If not, return the index where it would be if it were inserted in order.

Input: nums = [1,3,5,6], target = 5 Output: 2

20. Given a $m \times n$ matrix grid which is sorted in non-increasing order both row-wise and column-wise, return the number of negative numbers in grid.

```
Input: grid = [[4,3,2,-1],[3,2,1,-1],[1,1,-1,-2],[-1,-1,-2,-3]]
Output: 8
Explanation: There are 8 negatives number in the matrix.
```

Example 2:

```
Input: grid = [[3,2],[1,0]]
Output: 0
```

Week 8: String Handling

1. Louise joined a social networking site to stay in touch with her friends. The signup page required her to input a *name* and a *password*. However, the password must be *strong*. The website considers a password to be *strong* if it satisfies the following criteria:

- Its length is at least 6.
- It contains at least one digit.
- It contains at least one lowercase English character.
- It contains at least one uppercase English character.
- It contains at least one special character. The special characters are:
@#\$\$%^&*()-+!

2. A space explorer's ship crashed on Mars! They send a series of SOS messages to Earth for help.

Letters in some of the SOS messages are altered by cosmic radiation during transmission. Given the signal received by Earth as a string, determine how many letters of the SOS message have been changed by radiation.

`s = 'SOSTOT'`

Example

The original message was SOSSOS. Two of the message's characters were changed in transit.

Function Description

Complete the `marsExploration` function in the editor below. `marsExploration` has the following parameter(s):

string `s`: the string as received on Earth

Returns

int: the number of letters changed during transmission

3. Chef has a string `S` with him. Chef is happy if the string contains a contiguous substring of length strictly greater than 2 in which all its characters are vowels. Determine whether Chef is happy or not. Note that, in english alphabet, vowels are a, e, i, o, and u.
4. Given two strings `needle` and `haystack`, return the index of the first occurrence of `needle` in `haystack`, or -1 if `needle` is not part of `haystack`.
5. Given a string `s` consisting of words and spaces, return the length of the last word in the string. A word is a maximal substring consisting of non-space characters only.
 6. Given a string `S`, reverse only all the vowels in the string and return it. The vowels are 'a', 'e', 'i', 'o', and 'u', and they can appear in both lower and upper cases, more than once.

7. You have been given a String S. You need to find and print whether this string is a palindrome or not. If yes, print "YES" (without quotes), else print "NO" (without quotes).

Skill Oriented Exercise

8. Jeff, Chef's younger brother, is learning to read and knows a subset of the Latin alphabet. Chef gave Jeff a book with N words to practice. Jeff can only read words that consist of the letters he knows. The task is to determine which words Jeff can read based on the given letters and output "Yes" or "No" accordingly.

9. Timur loves code forces. That's why he has a string S having length 10 made containing only lowercase Latin letters. Timur wants to know how many indices string s differs from the string "codeforces".

For example string s= "coo**l**for**s**e**z**" differs from "codeforces" in 4 indices, shown in bold.

Up the Ladder

A man wants to reach window which is 40ft above from the ground. And the distance between the foot of the ladder and wall is 9 feet. How long should the ladder be?

10. Given two strings s and t, return true if t is an anagram of s, and false otherwise. An Anagram is a word or phrase formed by rearranging the letters of a different word or phrase, typically using all the original letters exactly once. Given a string s, find the first non-repeating character in it and return its index. If it does not exist, return -1.
11. A robot starts at the origin (0, 0) on a 2D plane. It is given a sequence of moves represented by the string "moves". Each move is represented by 'R' (right), 'L' (left), 'U' (up), or 'D' (down). The task is to determine if the robot returns to the origin after completing all the moves. The robot's direction is irrelevant, and all moves have the same magnitude. Return true if the robot ends up at the origin, and false otherwise.
12. Chandu is a bad student. Once his teacher asked him to print the reverse of a given string. He took three hours to solve it. The teacher got agitated at Chandu and asked you the same question. Can you solve it?
13. There is a string s of lowercase English letters that is repeated infinitely many times. Given an integer n find and print the number of letter a's in the first n letters of the infinite string.

Week 9: Recursion

1. Given an integer n, return true if it is a power of three. Otherwise, return false. An integer n is a power of three, if there exists an integer x such that $n == 3^x$.
2. You are climbing a staircase. It takes n steps to reach the top. Each time you can either

climb 1 or 2 steps. In how many distinct ways can you climb to the top?

3. Given an integer n , return true if it is a power of four. Otherwise, return false. An integer n is a power of four, if there exists an integer x such that $n == 4^x$.

4. You are given an integer N . You need to print $N!$ - the factorial of N .

Input The first line of the input contains a single integer T denoting the number of test cases. The description of T test cases follows. The first and only line of each test case contains a single integer N .

Output For each test case print a single line containing a single integer $N!$

5. The Fibonacci numbers, commonly denoted $F(n)$ form a sequence, called the Fibonacci sequence, such that each number is the sum of the two preceding ones, starting from 0 and 1

6. Kristen loves playing with and comparing numbers. She thinks that if she takes two different positive numbers, the one whose digits sum to a larger number is *better* than the other. If the sum of digits is equal for both numbers, then she thinks the smaller number is *better*. For example, Kristen thinks that 13 is better than 31 and that 12 is better than 11. Given an integer n , can you find the divisor of n that Kristin will consider to be the best?

7. A perfect number is a positive integer that is equal to the sum of its positive divisors, excluding the number itself. A divisor of an integer x is an integer that can divide x evenly. Given an integer n , return true if n is a perfect number, otherwise return false.

8. Given an integer num , repeatedly add all its digits until the result has only one digit, and return it.

9. **Something for Profit:** A friend of mine bought a used pressure cooker for Rs. 60. She somehow did not find it useful and so when a friend of hers offered her Rs. 70 she sold it to her. However, she felt bad after selling it and decided to buy it back from her friend' by offering her Rs. 80. After having bought it once again she felt that she did not really need the cooker. So, she sold it at the auction for Rs. 90. How much profit did she make? Did she at all make any profit?

10. Given a signed 32-bit integer x , return x with its digits reversed. If reversing x causes the value to go outside the signed 32-bit integer range $[-2^{31}, 2^{31} - 1]$, then return 0.

11. Given an integer array $nums$, move all 0's to the end of it while maintaining the relative order of the non-zero elements.

12. Write a function that takes the binary representation of an unsigned integer and returns the number of '1' bits it has (also known as the Hamming weight).

13. Martha is interviewing at Subway. One of the rounds of the interview requires her to cut a bread of size $l \times b$ into smaller identical pieces such that each piece is a square having maximum possible side length with no leftover piece of bread.

14. Given N two-dimensional points in space, determine whether they lie on some vertical or horizontal line.

If yes, print YES; otherwise, print NO.

Skill Oriented Exercise

PREDICT THE OUTPUT

```
#include <stdio.h> void foo(int n) {
    if (n > 0) { printf("%d ", n); foo(n - 1); printf("%d ", n);
    }
}
int main() {
    foo(3); return 0;
}
```

1. What is the output of the above program?

- 3 2 1 1 2 3
- 3 2 1
- 1 2 3
- 1 2 3 3 2 1

```
#include <stdio.h> int bar(int n) {
    if (n <= 0) { return 0;
    } else {
        return n + bar(n - 2);
    }
}
int main() {
    int result = bar(7); printf("%d", result); return 0;
}
```

2. What is the output of the above program?

- 20
- 16
- 14
- 12

```
#include <stdio.h> void baz(int n) {
    if (n > 0) {
        baz(n / 2); printf("%d ", n % 2);
    }
}
int main() {
    baz(10); return 0;
}
```

3. What is the output of the above program?

- 1 0 1 0
- 0 1 0 1
- 0 0 1 0 1
- 1 1 0 1

```
#include <stdio.h> int factorial(int n) {
    if (n == 0) { return 1;
    } else {
        return n * factorial(n - 1);
    }
}
int main() {
    int result = factorial(5); printf("%d", result); return 0;
}
```

4. What is the output of the above program?

- 120
- 24
- 25
- 20

```
#include <stdio.h>
int power(int base, int exponent) { if (exponent == 0) { return 1;
    } else {
        return base * power(base, exponent - 1);
    }
}
int main() {
    int result = power(2, 4); printf("%d", result); return 0;
}
```

5. What is the output of the above program?

- 16
- 8
- 32
- 64

Week 10: Structures

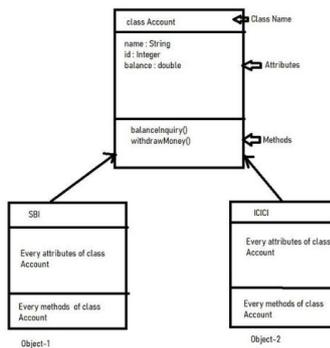

1. You are building a payroll system for a company with multiple departments. Design a program using structures that stores employee details such as name, employee ID, and salary. Implement an array of structures to store employee records for each department. Calculate the total salary expenditure for each department and display it. Additionally, identify the department with the highest salary expenditure and acknowledge it as the top-performing department
2. VGP logistics is a premium Cargo service for Sending/receiving parcels from Vijayawada to Singapore. You are appointed as Manager in delivery department and need to maintain the arrival and delivery of the consignments sent/received. Create a structure consignment with the following Members Consignment_id, name, from, to, DOS (Date of Shipment), net weight, Address.
For Example:
Consignment_id: 1008 Name: Haier Steamer From: Vijayawada
To: Singapore
DOS (Date of Shipment): 30-may-2023 net_weight: 28.8 kg
Address: Mint Street Chennai
3. You have been assigned the task of developing a student grading system for a prestigious college. Design a program using structures that stores student details, such as name, roll number, and marks in various subjects. Implement an array of structures to store multiple student records and calculate the overall percentage for each student. Additionally, provide a functionality to generate a grade for each student based on their percentage and display it alongside their record.
4. You are developing a soldier management system for an army unit. Each soldier's record consists of the following information: name, rank, and years of service. Implement an array of structures to store the records of multiple soldiers. Write a C program to calculate and display the average years of service for all soldiers in the unit.
5. You are working on a ship management system for a naval fleet. Each ship's record contains the following details: name, type (e.g., aircraft carrier, destroyer), and year of commissioning. Implement an array of structures to store the ship records. Write a C program to search for a specific type of ship within the fleet and display the names of all ships belonging to that type.
6. You have been assigned the task of developing a pilot roster system for an air force squadron. Each pilot's record includes the following information: name, rank, and flight hours. Implement an array of structures to store the pilot records. Write a C program to find and display the pilot with the highest number of flight hours in the squadron.
7. You are working on a reservation system for a luxurious hotel. Create a program using structures that stores guest details, including name, room number, and check-in date. Implement an array of structures to store multiple guest records and allow the hotel staff to search for guests by either their room number or name. Provide an additional feature that calculates the duration of each guest's stay and generates the total revenue earned by

the hotel.

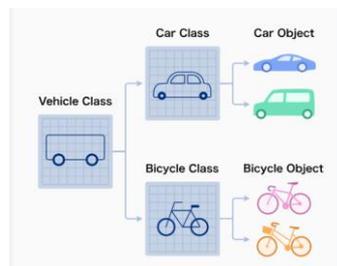

Skill Oriented Exercise

8. You have been tasked with developing a library management system for a renowned library. Create a program using structures that stores book information, including title, author, and publication year. Implement an array of structures to store multiple book records and allow the librarian to search for books by either title or author's name. Enhance the system by enabling the librarian to borrow and return books, updating the book status accordingly.
9. You have been assigned the task of creating a customer billing system using an array of structures. Each structure should store the customer's name, account number, and total amount due. Implement functions to add customer records, display all records, and find the customer with the highest amount due.
10. You are working on a car inventory management system using an array of structures. Each structure should hold the details of a car, including the make, model, and year of manufacture. Implement functions to add car records, display all records, and find the newest car in the inventory.
11. You are developing a product inventory management system for a retail store. Each product has a unique identifier, name, price, and quantity in stock. Implement an array of structures to store the product records. Create functions to add new products, update product details, display all products, and search for products based on their identifier or name.

Week 11: Class and Objects:

1. Create a class and the object code for the above scenario.

2. Develop code for Class and Object.

Week 12: Data Abstraction

Developing a banking application that handles various types of accounts such as savings, checking, and loans.

- **Abstraction Use:** Create abstract classes or interfaces like Account with common methods (e.g., deposit(), withdraw(), getBalance()). Concrete classes (e.g., SavingsAccount, CheckingAccount) implement these methods. The user interacts with Account objects without needing to know the specific type of account or its internal workings.

Inheritance

Developing a graphical user interface (GUI) library with various types of buttons.

- **Inheritance Use:** Create a base class Button with common properties like label, size, and methods like click(). Derive subclasses like ImageButton, ToggleButton, and RadioButton that inherit from Button and add specific properties or methods unique to each type of button.

Building an e-commerce platform with different types of products.

- **Inheritance Use:** Define a base class Product with common attributes like name, price, and methods like applyDiscount(). Create subclasses like Electronics, Clothing, and Books, each adding specific attributes (e.g., Electronics might have warrantyPeriod, Clothing might have size and color).

Skill Oriented Exercise

Building educational software that manages different types of learning resources.

- **Inheritance Use:** Establish a base class LearningResource with common properties like title, subject, and methods like display(). Derive subclasses such as Book, VideoLecture, and Quiz, each adding specific attributes and methods (e.g., Quiz might have questions and a method evaluate()).

Designing a system to classify and manage information about different animals.

- **Inheritance Use:** Define a base class Animal with common attributes like name, habitat, and methods like eat(), sleep(). Create subclasses such as Mammal, Bird, and Reptile, each with specific characteristics and methods (e.g., Bird might have methods fly()).

Week 13: Polymorphism

An application that can draw various shapes such as circles, rectangles, and triangles.

- **Polymorphism Use:** Define an abstract class Shape with a method draw(). Implement subclasses Circle, Rectangle, and Triangle, each providing its specific draw() implementation. The application can then handle any shape object through the Shape interface

A program that simulates sounds of different animals.

- **Polymorphism Use:** Create a base class Animal with an abstract method makeSound(). Implement subclasses Dog, Cat, and Cow that override makeSound(). The simulator can then invoke makeSound() on any animal object

Managing different types of transportation such as cars, buses, and bicycles.

Skill Oriented Exercise

- **Polymorphism Use:** Define a base class Vehicle with an abstract method move(). Implement subclasses Car, Bus, and Bicycle, each with its own implementation of move(). The system can then manage different vehicles uniformly

A system sending notifications via email, SMS, and push notifications.

- **Polymorphism Use:** Define an abstract class Notification with a method send(). Implement subclasses EmailNotification, SMSNotification, and PushNotification, each with its own send() method. The system can send notifications through any medium using the same interface

Week 14: Virtual functions

A document editor that supports different types of documents such as text documents, spreadsheets, and presentations.

- **Virtual Function Use:** Define a base class Document with a virtual function save(). Subclasses TextDocument, Spreadsheet, and Presentation override save() to handle specific saving mechanisms.

An audio processing library that handles various audio effects such as reverb, echo, and distortion.

Skill Oriented Exercise

- **Virtual Function Use:** Define a base class AudioEffect with a virtual function apply(). Subclasses ReverbEffect, EchoEffect, and DistortionEffect override apply() to implement specific effects.

An AI strategy game that involves different types of game characters such as warriors, mages, and archers.

- **Virtual Function Use:** Define a base class Character with a virtual function attack(). Subclasses Warrior, Mage, and Archer override attack() to provide specific attack behaviors.

Week 15: Exception handling

1) File Operations Scenario: An application needs to read data from a file.

Exception Handling Use: Implement code to handle scenarios where the file might not exist, the application lacks permissions, or the file is corrupted. Use try-catch blocks to manage these exceptions:

2) E-Commerce Checkout Process

Scenario: An e-commerce application processes user orders during checkout.

- Exception Handling Use: Handle errors such as invalid payment details, out-of-stock items, or delivery address issues.

Skill Oriented Exercise

3) An application processes images for various operations like resizing, filtering, and saving.

- Exception Handling Use: Handle errors such as unsupported file formats, corrupted files, or out-of-memory issues.

TEXTBOOKS:

1. Forouzan B.A & Richard F. Gilberg, A Structured Programming Approach using C,3rd Edition(2013), Cengage Learning.

24X0073: ENGLISH LANGUAGE AND COMMUNICATION SKILLS LABORATORY

B.Tech. I Year. I Sem.

L T P C
0 0 2 1

The **English Language and Communication Skills (ELCS) Lab** focuses on the production and practice of sounds of language and the students with the use of English in everyday situations both in formal and informal contexts.

Course Objective

- ✓ To facilitate computer-assisted multi-media instruction enabling individualized and independent language learning
- ✓ To sensitize the students to the nuances of English speech sounds, word accent, intonation and rhythm
- ✓ To bring about a consistent accent and intelligibility in students' pronunciation of English by providing an opportunity for practice in speaking
- ✓ To improve the fluency of students in spoken English and neutralize the impact of dialects.
- ✓ To train students to use language appropriately for public speaking, group discussions and interviews

Course Outcomes: Students will be able to:

- ✓ Understand the nuances of the English language through audio-visual experience and group activities
- ✓ Neutralize their accent for intelligibility
- ✓ Speak with clarity and confidence which in turn enhances their employability skills

Syllabus: English Language and Communication Skills Lab (ELCS) shall have two parts:

- a. **Computer Assisted Language Learning (CALL) Lab**
- b. **Interactive Communication Skills (ICS) Lab**

Listening Skills:

Objectives

1. To enable students to develop their listening skills so that they may appreciate their role in the LSRW skills approach to language and improve their pronunciation
2. To equip students with necessary training in listening, so that they can comprehend the

speech of people of different backgrounds and regions

Students should be given practice in listening to the sounds of the language, to be able to recognize them and find the distinction between different sounds, to be able to mark stress and to recognize and use the right intonation in sentences.

- Listening to general content
- Listening to fill up information
- Intensive listening
- Listening to specific information

Speaking Skills:

Objectives

1. To involve students in speaking activities in various contexts
 2. To enable students to express themselves fluently and appropriately in social and professional contexts
- Oral practice
 - Describing objects/situations/people
 - Role play – Individual/Group activities
 - Just A Minute (JAM) Sessions

The following course content is prescribed for the **English Language and Communication Skills Lab**.

Exercise – ICALL Lab:

Understand Listening Skill- Its importance – Purpose- Process- Types- Barriers- Effective Listening. *Practice:* Introduction to Phonetics – Speech Sounds – Vowels and Consonants

– Minimal Pairs- Consonant Clusters- Past Tense Marker and Plural

Marker- *Testing Exercises*

ICS Lab:

Understand: Spoken vs. Written Language- Formal and Informal English.

Practice: Ice-Breaking Activity and JAM Session- Situational Dialogues – Greetings – Taking Leave

– Introducing Oneself and Others.

Exercise –

IIICALL

Lab:

Understand: Structure of Syllables – Word Stress– Weak Forms and Strong Forms – Stress pattern in sentences – Intonation.

Practice: Basic Rules of Word Accent - Stress Shift - Weak Forms and Strong Forms- Stress pattern in sentences – Intonation - *Testing Exercises*

ICS Lab:

Understand: Features of Good Conversation – Strategies for Effective Communication. *Practice:* Situational Dialogues – Role Play- Expressions in Various Situations – Making Requests and Seeking Permissions - Telephone Etiquette.

Exercise -

IIICALL

Lab:

Understand: Errors in Pronunciation-Neutralising Mother Tongue Interference (MTI).

Practice: Common Indian Variants in Pronunciation – Differences between British and American Pronunciation -*Testing Exercises*

ICS Lab:

Understand: Descriptions- Narrations- Giving Directions and Guidelines – Blog Writing

Practice: Giving Instructions – Seeking Clarifications – Asking for and Giving Directions – Thanking and Responding – Agreeing and Disagreeing – Seeking and Giving Advice – Making Suggestions.

Exercise –IVCALL Lab:

Understand: Listening for General Details.

Practice: Listening Comprehension Tests - *Testing Exercises*

ICS Lab:

Understand: Public Speaking – Exposure to Structured Talks - Non-verbal Communication- Presentation Skills.

Practice: Making a Short Speech – Extempore- Making a Presentation.

Exercise –

VCALL

Lab:

Understand: Listening for Specific Details.

Practice: Listening Comprehension Tests -*Testing Exercises*

ICS Lab:

Understand: Group Discussion

Practice: Group Discussion

Minimum Requirement of infrastructural facilities for ELCS Lab:

1. Computer Assisted Language Learning (CALL) Lab:

The Computer Assisted Language Learning Lab has to accommodate 40 students with 40 systems, with one Master Console, LAN facility and English language learning software for self-study by students.

System Requirement (Hardware component):

Computer network with LAN facility (minimum 40 systems with multimedia)

with the following specifications:

- i) Computers with Suitable Configuration
- ii) High-Fidelity Headphones

2. Interactive Communication Skills (ICS) Lab :

The Interactive Communication Skills Lab: A Spacious room with movable chairs and audio-visual aids with a Public Address System, a T.V. or LCD, a digital stereo –audio & video system and camcorder etc.

Source of Material (Master Copy):

- *Exercises in Spoken English. Part 1,2,3.* CIEFL and Oxford University Press

Note: Teachers are requested to make use of the master copy and get it tailor-made to suit the contents of the syllabus.

Suggested Software:

- Cambridge Advanced Learners' English Dictionary with CD.
- Grammar Made Easy by Darling Kindersley.
- Punctuation Made Easy by Darling Kindersley.
- Oxford Advanced Learner's Compass, 10th Edition.
- English in Mind (Series 1-4), Herbert Puchta and Jeff Stranks with Meredith Levy,

Cambridge.

- English Pronunciation in Use (Elementary, Intermediate, Advanced)
Cambridge University Press.
- English Vocabulary in Use (Elementary, Intermediate, Advanced)
Cambridge University Press.
- TOEFL & GRE (KAPLAN, AARCO & BARRONS, USA, Cracking GRE by CLIFFS).
- Digital All
- Orell Digital Language Lab (Licensed Version)

2410596: WEB APPLICATION DEVELOPMENT

L T P C

0 0 2 1

COURSE OBJECTIVES: The students will try to learn

- HTML tags
- CSS
- Development of static web site
- Concepts of Java script
- Development of dynamic web site

COURSE OUTCOMES: After successful completion of the course, students should be able to

- Learn HTML tags and CSS
- Develop static web pages using HTML
- Use CSS in web pages
- Understand basic concepts of Javascript
- Develop dynamic web pages

PART-A

1. Write a HTML program to create a webpage about the different art forms of India, with appropriate title on the title bar. Use different heading tags for the headings, and list them using ordered list.
2. Write a HTML program to create sections in the document using appropriate tags and apply different color as background to them. Use internal hyperlinks to move to different points within the page.
3. Write a HTML program to insert a picture on the webpage, giving description for the picture in a paragraph. Use properties of height, width, hspace, vspace and align, with different values.
4. Write a HTML Program, to create a profile of 2 pages, the First page containing the applicant's picture with personal details using unordered lists, and the second containing Educational details using tables. Use hyperlinks to move to the next page.
5. Using Frames create an Indian Flag and insert the image of chakra in the center.
6. Create a frame like structure based on the given diagram, such that When the first link is clicked, the contents of the first frame is filled with the corresponding information and when the second link is clicked the second frame is filled.

<ul style="list-style-type: none">● <u>Networks</u>● <u>Simulation</u>	Networks.....
	Simulation

7. Write a program in HTML to demonstrate the concept of Image map, for India map. Map for areas rectangle, Circle and polygon.

PART-B

1. Write a program using Javascript to do the multiplication table for a number entered by the user in the textbox.
2. Create a sparse array using the values entered by the user in the five textboxes, and use Array methods such as sort(),pop(),push(), reverse() and join().
3. Create a Math object and use methods ceil(),floor(), round() for rounding off the number, also use methods such as cos(), sin(),sqrt().
4. Write a Program using Javascript to print a bill for 5 items purchased by the user.
5. Write a program Using Date object, to display appropriate greeting message “Good Morning” or “Good Afternoon” or “Good Night”, in an alert box with the user’s name, after receiving the same in the prompt box.
6. To demonstrate the concept of styles, Write a program applying internal style for paragraph tag, and override the same by applying inline style. Also create an external CSS file applying styles for the headings.
7. Create a registration form for creating an email account, having the input type elements like checkbox, radio button, select option, text area and submit button, and validate the textboxes for verifying the password.
8. Create a web page using two image files, which switch between one another as the mouse pointer moves over the image. Use onMouseOut and onMouseOver event handlers.
9. Using filters apply opacity feature to blur the image and using Transition apply hover feature, so the image will be transparent again when the mouse pointer is placed on the image.

2420002: DIFFERENTIAL EQUATIONS AND VECTOR CALCULUS (CSE, CSD, CSM, ECE, EEE, MECH, CIVIL)

I Year B.Tech. II Sem.

L T P C

3 1 0 4

Course Overview:

This course plays a crucial role in engineering, serving as the foundation upon which engineers build and apply their knowledge to solve real world applications. It presents a systematic and comprehensive introduction to ordinary differential equations and vector calculus for engineering students. Mathematical concepts and various techniques are presented in a clear logical and concise manner. A linear differential equation is used to regulate the flow of electricity in various electrical circuits like LR, LCR and CR circuits. Vector calculus is extensively used in the description of electromagnetic fields, gravitational fields and fluid flow.

Pre-requisites: Mathematics courses of 10+2 year of study.

Course Objectives: The student will try to learn

- Methods of solving the differential equations of first order and first degree.
- Concept of higher order linear differential equations.
- Concept, properties of Laplace transforms, solving ordinary differential equations by using Laplace transforms techniques.
- The physical quantities involved in engineering field related to vector valued functions.
- The basic properties of vector valued functions and their applications to line, surface and volume integrals.

Course outcomes: After successful completion of the course, students should be able to

CO1: Identify whether the given first order differential equation is exact or not.

CO2: Solve higher differential equation and apply the concept of differential equation to real world problems.

CO3: Use the Laplace transforms techniques for solving ODE's.

CO4: Apply the Del operator to scalar and vector point functions.

CO5: Evaluate the line, surface and volume integrals and converting them from one to another.

UNIT-I: First Order ODE 10L

Exact differential equations, equations reducible to exact differential equations, linear and Bernoulli's equations, Orthogonal Trajectories (only in Cartesian Coordinates). Applications: Newton's law of cooling, Law of natural growth and decay.

UNIT-II: Ordinary Differential Equations of Higher Order 10 L

Second order linear differential equations with constant coefficients: Non-Homogeneous terms of the type e^{ax} , $\sin ax$, $\cos ax$, polynomials in x , $e^{ax}V(x)$ and $x V(x)$, method of variation of parameters, Equations reducible to linear ODE with constant coefficients: Legendre's equation, Cauchy-Euler equation.

UNIT-III: Laplace transforms 10 L

Laplace Transforms: Laplace Transform of standard functions, First shifting theorem, Second shifting theorem, Unit step function, Dirac delta function, Laplace transforms of functions when they are multiplied and divided by 't', Laplace transforms of derivatives and integrals of function (All without proof), Evaluation of integrals by Laplace transforms, Laplace transform of periodic functions, Inverse Laplace transform by different methods, convolution theorem (without proof). Applications: solving Initial value problems by Laplace Transform method.

UNIT-IV: Vector Differentiation 8 L

Vector point functions and scalar point functions, Gradient, Divergence and Curl, Directional derivatives, Vector Identities, Scalar potential functions, Solenoidal and Irrotational vectors.

UNIT-V: Vector Integration 10 L

Line, Surface and Volume Integrals, Theorems of Green's, Gauss and Stokes's (without proof) and their applications.

24X0009: ENGINEERING CHEMISTRY

B.Tech I Year II Sem

L T P C

3 1 0 4

Course overview:

1. **Importance of course-** It helps engineers understand the nature of different materials. It also helps engineers learn how to work with different types of matter without causing pollution or waste.
2. **Brief about course-** To impart knowledge on the fundamental concepts of chemistry Involved in application of several important engineering materials that are used in Industry/day to day life.
3. **Applications of course:** Engineering chemistry graduates use raw materials and chemicals to design, manufacture, and test new products, systems and machinery which are used in numerous industries.

Prerequisites: chemistry knowledge at Pre- University level

Course Objectives: The students will try to learn

1. Knowledge about desalination of brackish water and treatment of municipal water.
2. Fundamental aspects of battery chemistry, significance of corrosion its control to protect the structures.
3. Knowledge of polymers, conducting polymers, bio-degradable polymers and fiber reinforced plastics.
4. Basic concepts of petroleum and its products.
5. Knowledge about engineering materials like cement, smart materials and Lubricants.

Course Outcomes: After successful completion of the course, students should be able to

1. Apply softness of water by ion exchange process.
2. Analyze the various types Factors affecting of corrosion.
3. Understand the fundamental concepts of polymers
4. Analyze the various type of Gaseous Fuels.
5. Evaluate the smart materials and their Applications.

Course articulation matrix

UNIT - I: Water and its treatment: [8]

Introduction to hardness of water – Estimation of hardness of water by complexometric method and related numerical problems. Potable water and its specifications - Steps involved in the treatment of potable water-Disinfection of potable water by chlorination and breakpoint chlorination.

Boiler troubles: Sludges, Scales and Caustic embrittlement. Internal treatment of Boiler feed water - Calgon conditioning - Phosphate conditioning - Colloidal conditioning, External treatment methods - Softening of water by ion- exchange processes. Desalination of Brackish water – Reverse osmosis.

UNIT – II Battery Chemistry & Corrosion [8]

Introduction-Classification of batteries-primary, secondary and reserve batteries with examples. Basic requirements for commercial batteries. Construction, working and applications of: Lithium ion battery, Applications of Li-ion battery to electrical vehicles. Fuel Cells- Differences between battery and a fuel cell.

Construction and applications of Hydrogen Oxygen fuel cell. Solar cells - Introduction and applications of Solar cells.

Corrosion: Causes and effects of corrosion – theories of chemical and electrochemical corrosion mechanism of electrochemical corrosion,

Types of corrosion: Galvanic, water-line and pitting corrosion. Factors affecting rate of corrosion, Corrosion control methods- Cathodic protection – Sacrificial anode and impressed current methods. Surface coatings-Metallic coatings-Hot dipping-Galvanisation, Tinning

UNIT - III: Polymeric materials: [8]

Definition – Classification of polymers with examples – Types of polymerization–addition (Mechanism of free radical addition) and condensation polymerization with examples – Nylon 6:6.

Plastics: Definition and characteristics- thermoplastic and thermosetting plastics, Preparation, Properties and engineering applications of PVC ,Teflon, Fiber reinforced plastics (FRP).

Rubbers: Natural rubber and its vulcanization.

Elastomers: Characteristics –preparation – properties and applications of Buna-S,Thiokol rubber.

Conducting polymers: Characteristic, Classification and applications of conducting polymers.

Biodegradable polymers: Concept and advantages - Poly vinyl alcohol and their applications.

UNIT - IV: Energy Sources: [8]

Introduction, Calorific value of fuel – HCV, LCV- Dulong's formula. Classification- solid fuels: coal – analysis of coal – proximate and ultimate analysis and their significance. Liquid fuels – petroleum and its refining,. Knocking – octane and cetane rating, synthetic petrol - Fischer-Tropsch's process; Gaseous fuels – composition and uses of natural gas, LPG and CNG.Bio-diesel- Transesterification-advantages.

UNIT - V: Engineering Materials: [8]

Cement: Portland cement, its composition, setting and hardening, special cements-white cement, waterproof cement, high alumina cement.

Smart materials and their applications:-

Classification-(piezoelectric materials-quartz, Shape memory material (SMA-Nitinol), Thermoresponsive materials, magneto rheological materials-Examples.

Lubricants: Classification of lubricants with examples-characteristics of a good lubricants-mechanism of lubrication (thick film, thin film and extreme pressure)- properties of lubricants: viscosity, cloud point, pour point, flash point and fire point.

TEXT BOOKS:

1. Engineering Chemistry by P.C. Jain and M. Jain, Dhanpatrai Publishing Company, 2010.
2. Engineering Chemistry by Rama Devi, and Rath, Cengage learning, Second edition 2022.
3. Textbook of Engineering Chemistry by Jaya Shree Anjireddy, Wiley Publications,2022.
4. A text book of Engineering Chemistry by M. Thirumala Chary, E. Laxminarayana and K. Shashikala, Pearson Publications, 2021.
- 5.

REFERENCE BOOKS:

5. Engineering Chemistry by Shashi Chawla, Dhanpatrai and Company (P) Ltd. Delhi(2011)

(24X0201) Principles of Electrical and Electronics Engineering
(Common to CSE, CSM and CSD)

B.Tech I Year. I Sem

L T P C
3 0 0 3

COURSE OVERVIEW:

This Course provides the essential principles and theories Important in various aspects such as practical applications in daily life like household appliances, lighting systems, and personal electronics and industry use and technology.

It covers essential principles and concepts related to electrical and electronics systems promoting critical thinking, problem-solving, and analytical skills. It provides overview on basic definitions of electrical and electronics engineering, DC and AC circuits and theorems. It also gives knowledge about characteristics and applications of electronics devices.

Prerequisite: NIL

COURSE OBJECTIVES: The students will be able

- To analyze and solve electric circuits.
- To provide an understanding of basics in Electrical circuits and identify the types of electrical machines for a given application.
- To analyze the LT switchgear components
- To explain the characteristics of Electronics devices.

COURSE OUTCOMES: After successful completion of the course, students should be able to

- Analyze DC Electrical circuits to compute and measure the parameters.
- Analyze AC Electrical circuits with phasor representations
- Comprehend the working principles of Electrical Machines.
- Comprehend the components of LT Switchgear.
- Identify and test various characteristics of electronics devices.

MODULE –I

DC Circuits: Electrical circuit elements (R, L and C), voltage and current sources, KVL & KCL, analysis of simple circuits with dc excitation, Superposition theorem, Norton's Theorem and Thevenin's Theorem.

MODULE – II

AC Circuits: Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor, Analysis of single-phase ac circuits, Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE -III

Transformers: Construction and working principle of Single-phase transformer, equivalent circuit, losses in transformers and efficiency.

DC Machines: Construction and working principle of DC generators, EMF equation, working principle of DC motors and Torque equation.

MODULE -IV

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of wires, cables and earthing.

Batteries: Types of batteries, important characteristics for batteries, elementary calculations for energy consumption, power factor improvement and battery backup.

MODULE -V

PN junction Diode: Volt-Ampere characteristics, applications, Static and dynamic resistances

Zener Diode: Volt-Ampere characteristics and its applications.

Rectifiers: Half wave Rectifier, full wave rectifier, Bridge Rectifier-Ripple factor, efficiency and peak inverse voltage.

Text Books:

1. Basic Electrical Engineering - By M.S. Naidu and S. Kamakshaiiah – TMH.
2. Basic Electrical Engineering –By T.K. Nagasarkar and M.S. Sukhija Oxford University Press.
3. Electronic Devices and Circuits- J. Millman, C. Halkias, Tata Mc-Graw Hill, Second Edition.
4. Integrated Electronics- Jacob Millman, C. Halkies, C.D.Parikh, Tata Mc-Graw Hill, 2009.

Reference Books:

1. Theory and Problems of Basic Electrical Engineering by D.P. Kothari& I.J. Nagrath PHI.
2. Principles of Electrical Engineering by V. K Mehta, S.Chand Publications.
3. Essentials of Electrical and Computer Engineering by David V. Kerns, JR. J. David Irwin Pearson.
4. Electronic Devices and Circuits-K. Satya Prasad, VGS Book Links.
5. Electronic Devices and Circuits - Salivahanan, Kumar, Vallavaraj, Tata Mc-Graw Hill, Second Edition
6. Electronic Devices and Circuits – Bell, Oxford.

24X0502: Essentials of Problem Solving Using Python

B.Tech. I Year II Sem.

L T P C
3 0 0 3

Course Overview:

This course gives acquaintance to Python Programming and Graph Theory. The course deals with Python programming concepts and concepts in graph theory like properties of standard graphs, Eulerian graphs, Hamiltonian graphs, Chordal graphs, Distances in graphs, Planar graphs, graph connectivity and Colouring of graphs.

Graph theory is used in Network Topologies and Routing Algorithms, Algorithm Design, Social Network Design, Logistics.

Prerequisites:

- A course on “Problem solving using C and C++”.

Course Objectives: The students will try to learn

- Basic building blocks of python
- Using of Functions and Modules
- Importance of Multithreading in problem solving
- The fundamental concepts of graph theory
- Graph coloring and traversal algorithms for solving real-world problems

Course Outcomes: After successful completion of the course, students should be able to

- Construct Python data structures programs using tuples sets and dictionaries
- Design Programs using Functions and Modules
- Implement Multithread concept in solving problems
- Understand graph terminology
- Build efficient graph routing algorithms for various optimization problems on graphs.

Module-I

[10]

Python Basics: Python Objects, Operators, Python Numbers, Operators, Built-in Functions. Conditionals and Loops-if, else, elif, for, while, break, continue, pass.

Sequences: Strings, Lists, and Tuples- Built-in Functions, Special features. Mapping and Set Types: Dictionaries, Sets.

Module –II

[9]

Functions and Functional Programming –Calling Functions , Creating Functions, Passing Functions , Formal Arguments, Variable-Length Arguments, Functional Programming.

Modules–Modules and Files, Namespaces, Importing Modules, Module Built-in Functions, Packages, Related modules.

Module –III**[8]**

Files and Input / Output: File Objects, File Built-in Functions, File Built-in Methods, File Built-in Attributes, Standard Files, Command-line Arguments.

Multithreaded Programming: Introduction, Threads and Processes, Python Threads, the Global Interpreter Lock, Thread Module, Threading Module.

Module -IV**[8]**

Graph terminology, Digraphs, Weighted graphs, Complete graphs, Graph complements, Bipartite graphs, Graph combinations, Isomorphism's, Matrix representations of graphs, incidence and adjacency matrices, Degree Sequence, Eulerian circuit: Konigsberg bridge problem, Touring a graph; Eulerian graphs, Hamiltonian cycles

Module – V**[7]**

Shortest paths: Dijkstra's algorithm, Walks using matrices.

Graph Coloring And Graph Algorithms: Four color theorem, Vertex Coloring, Edge Coloring, Coloring Variations.

Graph traversal: Depth-First Search, Breadth-First Search and its applications; The traveling salesman problem, Minimum Spanning Trees: Kruskal's and Prim's algorithm

TEXTBOOKS:

1. Core Python Programming, Wesley J. Chun, Third Edition, Prentice Hall PTR
2. Karin R Saoub, Graph Theory: An Introduction to Proofs, Algorithms, and Applications, 1 st edition, Chapman and Hall, 2021.

24X0371: COMPUTER AIDED ENGINEERING GRAPHICS
(Common to All Branches)

B.Tech I Year II Semester

L T P C
1 0 4 3

Course Overview:

Engineering Graphics is a foundational course designed to introduce first-year engineering students to the principles and practices of technical drawing and computer-aided design (CAD). This course covers essential topics such as geometric construction, orthographic projection, isometric drawing, lettering and dimensioning. Students will develop skills to create and interpret engineering drawings and gain proficiency in using CAD software for engineering applications.

Prerequisite: NIL

Course Objective: The students will be able

1. To understand the importance of engineering graphics in the engineering design process.
2. To apply principles of dimensioning and lettering in engineering drawings
3. To develop the ability to create and interpret technical drawings.
4. To master geometric constructions and projections.
5. To gain proficiency in computer-aided design (CAD) software.

Course Outcomes: Upon successful completion of this course, students will be able to:

1. Explain the role of engineering graphics in the engineering design and manufacturing process.
2. Understand the fundamental concepts of AutoCAD.
3. Perform basic geometric constructions and create accurate technical drawings.
4. Develop skills to create 2D and 3D drawings.
5. Use CAD software to create, modify, and manage engineering drawings.

Module-I: Introduction to Engineering Graphics: [12]

The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line, The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.

Module-II: Conic Sections and Engineering Curves

[10]

Construction of Ellipse, Parabola, Hyperbola (General Method Only)
Engineering Curves: Cycloids, Epicycloid and Hypocycloid

Module -III: Orthographic Projections

[12]

Introduction to Projections: Assumptions, Principles and Different angles of projections.
Projections of Points: Located in all Quadrants
Projections of Lines: Parallel, Perpendicular, Inclined to one plane.

Module -IV: Projections of Planes and Projection of Solids [10]

Projections of Planes: Introduction to planes, Regular lamina- Orientations- Surface parallel to HP, Surface parallel to VP, Inclined to HP, Inclined to VP.

Projections of Solids: Introduction to solids, Right Regular Solids- Orientations- Axis perpendicular to HP, Axis perpendicular to VP, Axis inclined to HP, Axis inclined to VP.

Module –V: Isometric Drawing and Conversions

[14]

Principles of Isometric projections, Isometric View and Isometric Scale, Isometric view of: Planes and Solids, Conversion: Isometric to Orthographic and Vice Versa

24X0072: ENGINEERING CHEMISTRY LAB

B.Tech. I Year. I Sem

L T P C
0 0 2 1

Course Objectives: The course consists of experiments related to the principles of chemistry required for engineering student. The student will learn:

- Estimation of hardness of water to check its suitability for drinking purpose.
- Students are able to perform estimations of acids and bases using conductometry, potentiometry methods.
- Students will learn to prepare polymers such as Bakelite and Thiokol rubber in the laboratory.
- Students will learn skills related to the lubricant properties such as saponification value, surface tension and viscosity of oils.

Course Outcomes: The experiments will make the student gain skills on:

- Determination of parameters like hardness of water
- Able to perform methods such as conductometry, potentiometry and in order to find out the concentrations or equivalence points of acids and bases.
- Students are able to prepare polymers like bakelite and Thiokol rubber.
- Estimations saponification value, surface tension and viscosity of lubricant oils.

List of Experiments:

I. Volumetric Analysis: Estimation of Hardness of water by EDTA Complexometry method.

II. Conductometry: 1. Estimation of the concentration of an strong acid by Conductometry.

III. Potentiometry: Estimation of the amount of Fe^{+2} by Potentiometry.

IV. Dichrometry: Determination of Ferrous ion by Dichrometry

V. Preparations:

1. Preparation of Thiokol rubber

VI. Lubricants:

1. Estimation of acid value of given lubricant oil.
2. Estimation of Viscosity of lubricant oil using Ostwald's Viscometer.

VII. Preparation of Hand sanitizer(Iso propyl alcohol)

VIII. Virtual lab experiments

1. Construction of Fuel cell and its working.
2. Smart materials for Biomedical applications
3. Batteries for electrical vehicles.
4. Functioning of solar cell and its applications.

REFERENCE BOOKS:

1. Lab manual for Engineering chemistry by B. Ramadevi and P. Aparna, S Chand Publications, New Delhi (2022)
2. Vogel's text book of practical organic chemistry 5th edition
3. Inorganic Quantitative analysis by A.I. Vogel, ELBS Publications.
4. College Practical Chemistry by V.K. Ahluwalia, Narosa Publications Ltd. New Delhi (2007).

(24X0271) Principles of Electrical and Electronics Engineering Lab
(Common to CSE, CSM and CSD)

B.Tech. I Year. II Sem

L T P C
0 0 2 1

COURSE OVERVIEW:

A element of electrical and electronics engineering laboratory offers a hands-on setting and simulation of basic circuits where students can apply the theoretical concepts and software packages learned in their electrical and electronics engineering courses. These labs are crucial for grasping the practical aspects of circuit design, electronics, electrical systems.

Pre-requisite: NIL

COURSE OBJECTIVES:

- To analyze a given network by applying various electrical and electronics laws and network theorems
- To know the response of electrical circuits for different excitations.
- To calculate, measure and know the relation between basic electrical parameters.
- To understand basic block sets of different simulation platform used in electrical/electronic circuit design.
- To understand use and coding in different software tools used in electrical/ electronic circuit design.
- To understand the simulation of electric machines/circuits for performance analysis.

COURSE OUTCOMES: Upon the completion of laboratory practical course, the student will be able to

- Get an exposure to basic electrical laws.
- Understand the response of different types of electrical circuits to different excitations.
- Understand the measurement, calculation and relation between the basic electrical parameters.
- Get an exposure to basic electronics devices and laws and Develop knowledge of software packages to model and program electrical and electronics systems.
- Model different electrical and electronic systems and analyze the results by used software packages for simulation in laboratory experimentation.

List of experiments / demonstrations:

PART A: Conduct All the experiments

1. Verification of Ohms Law.
2. Verification of KVL and KCL.
3. Verification of super position theorem.
4. Verification of Norton's and Thevenin's Theorem.
5. Resonance in Series RLC circuit.

PARTB: Simulate any five from following experiments using Multisim / MATLAB Software:

1. Simulate V-I Characteristics of PN Junction Diode in a)Forward Bias and b)Reverse Bias.
2. Simulate V-I Characteristics of Zener Diode and Observe Zener as a Voltage Regulator.
3. Simulate Characteristics of Half Wave Rectifier
4. Simulate Characteristics of Full Wave Rectifier.
5. Simulate the Performance Characteristics of a DC Shunt Motor.
6. Simulate the load test on single phase transformer to find out efficiency
7. Simulate Kirchhoff's voltage law using basic series DC Circuit - 4 with resistors. Where $V_s = 6\text{ V}$, $R_1 = 100\ \Omega$, $R_2 = 220\ \Omega$, $R_3 = 1\text{ k}\ \Omega$
8. Simulate Kirchhoff's current law using basic parallel DC Circuits - 5 with resistors. Where $V_s = 6\text{ V}$, $R_1 = 100\ \Omega$, $R_2 = 220\ \Omega$, $R_3 = 1\text{ k}\ \Omega$

24X0572:Essentials Of Problem Solving Using Python Laboratory

B.Tech. I Year II Sem.

L	T	P	C
0	0	2	1

Course Overview:

This course gives acquaintance to Python Programming and Graph Theory. It deals with Python programming concepts and concepts in graph theory like properties of standard graphs, Eulerian graphs, Hamiltonian graphs, Chordal graphs, Distances in graphs, Planar graphs, graph connectivity and Colouring of graphs. Python programming is used developing machine learning and data science applications. Graph theory is used in Network Topologies and Routing Algorithms, Algorithm Design, Social Network Design, Logistics.

Prerequisites:

- A course on “Problem solving using C and C++”.

Co-Requisites: Essentials of problem solving

Course Objectives: The students will try to learn

- Basic building blocks of python
- Using of Functions and Modules
- Importance of Multithreading in problem solving
- The fundamental concepts of graph theory
- Graph coloring and traversal algorithms for solving real-world problems

Course Outcomes: After successful completion of the course, students should be able to

- Construct Python data structures programs using tuples sets and dictionaries
- Design Programs using Functions and Modules
- Implement Multithread concept in solving problems
- Understand graph terminology
- Build efficient graph routing algorithms for various optimization problems on graphs.

Week 1: Python Numbers

- a) You are developing a program to determine whether a given year is a leap year, using the following formula: a leap year is one that is divisible by four, but not by one hundred, unless it is also divisible by four hundred. For example, 1992, 1996, and 2000 are leap years, but 1967 and 1900 are not. The next leap year falling on a century is 2400.
- b) You are developing a program to determine the greatest common divisor and least common multiple of a pair of integers.
- c) You are developing a program to create a calculator application. Write code that will take

two numbers and an operator in the format: N1 OP N2, where N1 and N2 are floating point or integer values, and OP is one of the following: +, -, *, /, %, **, representing addition, subtraction, multiplication, division, modulus/remainder, and exponentiation, respectively, and displays the result of carrying out that operation on the input operands.

Hint: You may use the string split() method, but you cannot use the eval () built-in function.

Skill Oriented Exercise

1. The cricket World Cup has started in Chefland. There are many teams participating in the group stage matches. Any team that scores 12 or more points in the group stage matches qualifies for the next stage.
2. The elections in Chefland have concluded, and the results are conducted. Chef received X votes, and his rival Chefu received Y. Chef thinks he dominated the election if and only if he received at least double the number of votes Chefu received. Did Chef dominate the election?
3. Bob has an account in the Bobby Bank. His current account balance is W rupees. Each month, the office in which Bob works deposits a fixed amount of X rupees to his account. Y rupees is deducted from Bob's account each month as bank charges. Find his final account balance after Z months. Note that the account balance can be negative as well.
4. You're a bit all over the place as a college student. You used to eat out at expensive restaurants almost every day until your parents gave you a talking-to about being irresponsible. Now, you've got to control your eating and spending habits. So, here's the plan: you'll stick to the college mess for your meals every day, except Sundays. On Sundays, you're treating yourself to those fancy restaurant meals. The cost is Rs.X for the mess food each day, and Rs. Y for the restaurant splurges. Now, what's the cost of food per week? Note that you don't have to pay for the mess on Sundays. (A week has seven days, as usual.)

Week 2: Control Flow

- a) Write a Program for checking whether the given number is a prime number or not.
- b) Write a program to print Fibonacci series upto given n value.
- c) Write a program to calculate factorial of given integer number.
- d) Write a program to calculate value of the following series $1+x-x^2+x^3-x^4+\dots-x^n$.
- e) Write a program to print Pascal triangle.

Skill Oriented Exercise

1. Charlie is 17 years old and is eager to vote. Write a Python program to check if he meets the legal voting age of 18.
2. Your friend given a list of numbers to you and asked to find out the largest number among them. Write a python program to find the largest number.
3. Daemon don't like the multiples of 7 so help him to write a Python program that prints numbers from 1 to 30 but skip the number if it encounters multiple of a 7.

4. Bob has an account in the Bobby Bank. His current account balance is W rupees. Each month, the office in which Bob works deposits a fixed amount of X rupees to his account. Y rupees is deducted from Bob's account each month as bank charges. Find his final account balance after Z months. Note that the account balance can be negative as well.

Week-3 Python Sequences

- a) Write a program to sort the numbers in ascending order and strings in reverse alphabetical order.
- b) Given an integer value, return a string with the equivalent English text of each digit. For example, an input of 89 results in "eight-nine" being returned. Write a program to implement it.
- c) Write a program to create a function that will return another string similar to the input string, but with its case inverted. For example, input of "Mr. Ed" will result in "mR.eD" as the output string.
- d) Write a program to take a string and append a backward copy of that string, making a palindrome.

Skill Oriented Exercise

1. Alice loves quotes. Write a Python program to count the number of characters in her favorite quote: "To be or not to be, that is the question."
2. Emily wants to know if her friend's name is a palindrome. Write a Python program to check for a name is a palindrome.
3. Charlie just read a new book and wants to add it to his set of favorite books {"The Hobbit", "Harry Potter"}. Write a Python program to add "The Great Gatsby" to Charlie's set and print the updated set.
4. You have a list of friends' ages: [25, 22, 29, 24]. Write a Python program to sort this list in ascending order.

Week-4 Python Dictionaries

- a) Write a program to create a dictionary and display its keys alphabetically.
- b) Write a program to take a dictionary as input and return one as output, but the values are now the keys and vice versa.
- c) Given a List, extract all elements whose frequency is greater than K.
Ex: Input test_list = [4,6,4,3,3,4,3,4,3,8], k=3
Output =[4,3]

Skill Oriented Exercise

1. You have a dictionary of your friends' favorite fruits: {"Alice": "Apple", "Bob": "Banana", "Charlie": "Cherry"}. Write a Python program to print Bob's favorite fruit.
2. John manages a small store and needs a program to track his product inventory. Write a Python program that will help John. Creating the dictionary which contains the name and

price of the product and print the maximum product name along with its price.

Week-5 Files

- a) Write a program to compare two text files. If they are different, give the line and column numbers in the files where the first difference occurs.
- b) Write a program to compute the number of characters, words and lines in a file.

Skill Oriented Exercise

1. Alice wants to list all files in her current directory. Write a Python program to import the `os` module and use it to print the names of all files in the current directory.
2. Charlie wants to read the contents of `books.txt` line by line and print each book name. Write a Python program to open the file and use the `readline` method to print each line.
3. Write a Python program `greet.py` that takes a name as a command-line argument and prints "Hello, [name]!". Demonstrate how to run it with the argument "Alice".

Week- 6&7 Functions

- a) Write a function `ball collide` that takes two balls as parameters and computes if they are colliding. Your function should return a Boolean representing whether or not the balls are colliding.
Hint: Represent a ball on a plane as a tuple of (x, y, r) , r being the radius
If $(\text{distance between two balls centers}) \leq (\text{sum of their radii})$ then (they are colliding)
- b) Find mean, median, mode for the given set of numbers in a list.
- c) Write simple functions `max2()` and `min2()` that take two items and return the larger and smaller item, respectively. They should work on arbitrary Python objects. For example, `max2(4, 8)` and `min2(4, 8)` would each return 8 and 4, respectively.
- d) Write a function `nearly equal` to test whether two strings are nearly equal. Two strings `a` and `b` are nearly equal when `a` can be generated by a single mutation on `b`.
- e) Write a function `dups` to find all duplicates in the list.
- f) Write a function `unique` to find all the unique elements of a list.
- g) Write a function `cumulative_ product` to compute cumulative product of a list of numbers.
- h) Write a function `reverse` to reverse a list. Without using the `reverse` function.
- i) Write function to compute GCD, LCM of two numbers. Each function shouldn't exceed one line.

Skill Oriented Exercise

1. Alice wants to create a reusable function to greet her friends. Write a Python function `greet` that takes a friend's name as an argument and prints a greeting. Call the function with the name "Bob."

2. Charlie needs a function that can sum any number of arguments. Write a function `sum_numbers` that takes a variable number of arguments and returns their sum. Use this function to sum 1, 2, 3, and 4.
3. Alice wants a quick way to increment a number by 1. Write a lambda function that takes a number and adds 1 to it. Use this lambda to increment 7.
4. Bob has written a custom module called `mymath.py` with a function `add(a, b)` that returns the sum of `a` and `b`. Write a Python program to import this module and use the `add` function to add 3 and 5.

Week- 8 Multithreading

- a) Write a program to create thread using `thread` module.
- b) Write a program to create thread using `threading` module.
- c) Write a Program to use Python's `threading` module to calculate the square and cube of a number concurrently.

Skill Oriented Exercise

1. Alice wants to perform two tasks simultaneously: counting numbers and printing messages. Write a Python program to create two threads, one for counting from 1 to 5 and another for printing "Hello" five times.
2. Charlie is learning about the Global Interpreter Lock (GIL). Write a Python program demonstrating how GIL affects multi-threaded CPU-bound tasks by incrementing a counter in two threads.
3. Diana wants to print numbers in a separate thread using the `thread` module. Write a Python program to print numbers from 1 to 5 in a new thread.
4. Emily needs a background thread to print a heartbeat message every second. Write a Python program to create a daemon thread that prints "Heartbeat" every second.
5. Alice is managing a shared resource. Write a Python program where two threads increment a shared counter using a `threading.Lock` to avoid race conditions.

Week 9:

- a) Write a Python program to implement Euler Circuit.
- b) Write a Python program to implement Dijkstra's algorithm.
- c) Given a connected graph G with N nodes and M edges (edges are bi-directional). Every node is assigned a value $A[i]$. We define a value of a simple path as :

Value of path = Maximum of (absolute difference between values of adjacent nodes in a path). A path consists of a sequence of nodes starting with start node S and end node E .

$S-u_1-u_2-\dots-E$ is a simple path if all nodes on the path are distinct and S, u_1, u_2, \dots, E are nodes in G .

Given a start node S and end node E , find the minimum possible "**value of path**" which starts with node S and ends with node E .

- d) Yatin created an interesting problem for his college juniors. Can you solve it?

Given N rooms, where each room has a one-way door to a room denoted by $room[i]$, where $1 \leq i \leq N$. Find a positive integer K such that, if a person starts from room i , ($1 \leq i \leq N$), and continuously moves to the room it is connected to (i.e. $room[i]$), the person should end up in room i after K steps;

Note: The condition should hold for each room. If there are multiple possible values of K modulo $(109+7)$, find the smallest one. If there is no valid value of K , output -1

Week 10: Implement the following using python

- a) M-coloring
- b) Vertex coloring
- c) Edge coloring

Week 11: Implement the following graph traversal methods.

- a) Depth-First Search
- b) Breadth-First Search
- c) You are presented with a network comprising N computers and M wired connections between them. Your objective is to optimize the network's connectivity using precisely K wires from your inventory. The aim is to **maximize** the number of computers that can be linked together within the given constraints. Your task is to determine and report the size of the largest network that can be formed by establishing these connections.

In the context of this problem, computers are considered connected if they share either a direct or indirect wired connection. It is worth noting that the value of K will always be less than the number of isolated (standalone) networks in the given configuration, and it may even be zero.

- d) A country consists of N cities. These cities are connected with each other using $N-1$ bidirectional roads that are in the form of a tree. Each city is numbered from 1 to N . You want to safeguard all the roads in the country from any danger, and therefore, you decide to place cameras in certain cities. A camera in a city can safeguard all the roads directly connected to it. Your task is to determine the minimum number of cameras that are required to safeguard the entire country.

Week 12: Travelling Salesman problem.

- a) You are working in a salesmen company as a programmer.

There are n towns in your country and m directed roads between them. Each road has a cost person should spend on fuel. The company wants to sell goods in all n towns. There are infinitely many salesmen in the company. We can choose some positive number of salesmen and give a non-empty list of towns to each of them. Towns from the list are the towns to sell goods in. Each salesman will visit all the towns in his list in this particular order in cycle (after the last town he will return to the first town and so on). Salesman can visit other towns on his way but he will not sell goods in these towns. Two salesmen cannot sell goods in one town because it will attract unnecessary attention to your company. But for every town there must be a salesman who sell goods in this town. If salesman's list of towns consists of exactly one town then he should pay fee to stay in this town each month (each town has its own fee) or he should go for a round trip and spend money on fuel.

Your task is to calculate the minimal amount of money company must spend monthly to achieve its goals. We will assume that every salesman will spend a month to make one cycle.

- b) It is the final leg of the most famous amazing race. The top ' n ' competitors have made it to the final. The final race has just begun. The race has ' m ' checkpoints. Each team can reach any of the ' m ' checkpoint but after a team reaches a particular checkpoint that checkpoint gets closed and is not open to any other team. The race ends when ' k ' teams finish the race. Each team travel at a constant speed throughout the race which might be different for different teams. Given the coordinates of n teams and m checkpoints and speed of individual team return the value of minimum time needed to end the race.
- c) Little Jhool is a very lenient teaching assistant in his college. He doesn't like cutting the marks of students, so obviously, every student in his tutorial loves him. But anyway, the teacher has got to know about the leniency of Jhool while giving marks, so this time in exam, he decides to give a different exam paper to every single student to check how well have the students been taught by Jhool. Now, Little Jhool knows the strong and weak topics of every single student, so he wants to maximize the total marks obtained by students in his tutorial. You are given the number of students in Jhool's tutorial, denoted by n - n also being the number of different exam papers - that is, one for every student. Every student will get only one exam paper to solve. You are further given a matrix, $(n \times n)$ denoting the marks every student will get if he attempts a particular exam paper. You've to help Jhool figure out a way by which he could maximize the total score obtained by his entire class.

Week 13: Construct minimal spanning tree using the following

- a) Prim's Algorithm
- b) Kruskal's Algorithm
- c) There are total N Hacker-cities in a plane. Each city is located on coordinates $(X[i], Y[i])$ and there can be any number of cities on the same coordinates.

You have to make these cities connected by constructing some roads in such a way that it is possible to travel between every pair of cities by traversing the roads. The

cost of constructing one road between any two cities is the minimum of the absolute difference between their X and Y coordinates.

As you want to earn more and more, you decided to do this in the most optimal way possible, such that the total cost of constructing these roads is minimal. You have to return the minimum money you need to spend on connecting all the cities.

- d) Tom is visiting the country Hackerland. Hackerland has n cities and m bi-directional roads. There are k types of tokens. Token i costs c_i . The costs of the tokens are such that for all $2 \leq i \leq k$, $c_i \geq 2c_{i-1}$. For each road, you need to have a particular set of tokens, if you want to travel it. Note that you don't have to give the tokens, you just need to show them. Thus, one token can be used at any number of roads, where it is required. Tom wants to select a set of tokens, such that using them, he can go from any city to any other city. You have to help him minimize the total cost of tokens he buys.

TEXT BOOKS:

24X0027: PUBLICSPEAKING SKILLS

B.Tech.I Year. II Sem.

L T P C
2 0 0 0

Course Description: This course is designed to develop students' public speaking skills, focusing on speech preparation, delivery techniques, and the use of non-verbal communication. Students will learn to present effectively in various contexts, from formal presentations to informal meetings.

Prerequisites: Basic communication skills

Course Objectives: The students will learn:

- Understand the fundamentals and prerequisites of public speaking.
- Develop the ability to convert ideas into structured speeches.
- Enhance performance through verbal and non-verbal communication.
- Master different types of public speaking and professional presentations.
- Learn the etiquette and manner isms required for effective public speaking.

Course Outcomes: By the end of this course, students will be able to:

1. **Prepare and deliver** speeches confidently by organizing content and overcoming stage fright.
2. **Utilize** verbal and non-verbal communication to engage the audience effectively.
3. **Adapt** to different contexts by tailoring speeches for diverse audiences and settings.
4. **Exhibit** professionalism and creativity using proper etiquette, rhetorical devices, and creative language

Module1: Fundament also f Public Speaking(Noofhours:6)

This unit introduces public speaking, covering its importance, course structure, assessment methods, and prerequisites like understanding the audience, research, organizing speech structure, over coming Stage fright, and practicing speech delivery.

Module2:SpeechDevelopmentandDelivery(Noofhours:6)

This unit focuses on converting ideas into action through brainstorming, outlining, drafting speeches, using storytelling, and practicing impromptu speaking. It also emphasizes public speaking as a performative act, covering voice modulation, eye contact, audience engagement, effective pacing, gestures, and techniques for handling questions and interruptions.

Module3: Non-verbal Communication and Speech Types(Noofhours:5)

This unit explores non-verbal communication's role in public speaking, covering the importance and types of cues like facial expressions and gestures, aligning verbal with non-verbal messages, observing audience feedback, and adapting non-verbal communication to virtual settings. It also addresses various types of public speaking, including informative, persuasive, special occasion, motivational speeches, panel discussions, and debates.

Module4: Professional and Formal Speaking(Noofhours:6)

This unit covers speeches, including analysis of famous examples, preparing and delivering various types, conducting peer and self-evaluation, and effectively utilizing visual aids and multimedia. Adapting speeches for diverse audiences, and addressing practical skills for interviews, professional communication,conductingmeetings,conferences,presentations,andbuildingprofessionalnetworks.

Module5:Advanced Techniques and Professionalism(Noofhours:5)

This unit focuses on structuring and delivering professional presentations effectively, using creative language techniques for impactful messaging, and embodying proper etiquette and professionalism in public speaking.

II - I

24X6703: DISCRETE MATHEMATICS

L	T	p	C
2	0	0	2

Course Objectives: The students will try to learn

- Concepts of mathematical logic.
- The concepts of sets, relations, and functions.
- Algebraic structures
- Perform the operations associated with sets, functions, and relations.
- Recurrence relations.

Course Outcomes: After successful completion of the course, students should be able to

- Construct precise mathematical proofs
- Understand sets, relations, functions, and discrete structures.
- Analyze and solve counting problems on finite and discrete structures
- Use logical notation
- Formulate problems and solve recurrence relations.

MODULE – I

8

Mathematical logic: Introduction, Statements and Notation, Connectives, well formed formula, Equivalence of formulas, Normal forms, Theory of inference for the statement calculus, predicate calculus, Inference theory of predicate calculus.

MODULE – II

7

Set theory: Basic concepts of set theory, Set and Operations on sets, Relations and ordering, properties of binary relations in a set, Equivalence relation, Compatibility of relation, partial order relation, partial order set, Functions, Composition of functions, Inverse function, Recursive functions.

Module - III

6

Algebraic Structures: Introduction, Algebraic Systems, Semi groups and Monoids, Lattices as Partially Ordered Sets, Boolean Algebra.

MODULE-IV

7

Elementary Combinatorics: Basics of Counting, Combinations and Permutations, Enumeration of Combinations and permutations, Binomial Coefficients, Binomial and Multinomial Theorems, Principle of Inclusion-Exclusion.

MODULE-V

7

Recurrence Relations: Generating Functions of Sequences, Calculating Coefficients of generating functions, Recurrence relations, Solving recurrence relations by substitution and generating functions, Method of Characteristic roots, Solutions of Inhomogeneous Recurrence Relations.

TEXT BOOKS:

1. Discrete Mathematical Structures with Applications to Computer Science: J.P. Tremblay, R.

Manohar, McGraw-Hill, 1st ed.

2. Discrete Mathematics for Computer Scientists & Mathematicians: Joe I. Mott, Abraham Kandel, Theodore P. Baker, Prentis Hall of India, 2nd ed.

REFERENCE BOOKS:

1. Discrete and Combinatorial Mathematics - an applied introduction: Ralph.P. Grimald, Pearson education, 5th edition.

2. Discrete Mathematical Structures: Thomas Kosy, Tata McGraw Hill publishing co.

24X0505: SOFTWARE ENGINEERING

B.Tech. II Year

L T P C

2 0 0 2

Course Description: This course introduces the characteristics of software Generic view of software and the process models. The course emphasizes on software requirements system models, UML Basics, testing strategies, Metrics for process & products, instruction set design, RISK Management, RISK Identification, Quality Management, ISO : 9000 Quality

Pre-requisite: NIL

Course Objectives: The students will try to learn

- Importance of software engineering principles and software process framework
- Contemporary approaches for design models and requirements validation
- Various metrics and quality assurance strategies
- Designing of testing report.
- Different strategies for testing and risk management

Course Outcomes: After successful completion of the course, students should be able to

- Understand different process models
- Translate end-user requirements into system and software requirements, using e.g. UML, and structure the requirements in a Software Requirements Document (SRD).
- Identify and apply appropriate software architectures and patterns to carry out high level design of a system and be able to critically compare alternative choices.
- Develop a simple testing report
- Understand basics of Risk Management and Quality Management

Module –I

9

INTRODUCTION TO SOFTWARE ENGINEERING: The Evolving Role of Software, Characteristics of Software, The Changing Nature of Software, Legacy Software, Software Myths.

A Generic view of process: Software engineering- a layered technology, a process framework, the capability maturity model integration (CMMI), process patterns, process assessment, personal and team process models.

Process models: The waterfall model, incremental process models, evolutionary process models, the unified process, Agile models: Extreme Programming, Scrum, DSDM, FDD, CRYSTAL and Lean Software Development

Module –II**8**

Software Requirements: Functional and non-functional requirements, user requirements, system requirements, interface specification, the software requirements document. Requirements engineering process: Feasibility studies, requirements elicitation and analysis, requirements validation, requirements management.

Module –III**8**

System models: Context models, behavioral models, data models, object models, structured methods Design Engineering: Design process and design quality, design concepts, the design model, software architecture, Architectural styles and patterns. Introduction to UML: Basic Building Blocks of UML- Things, Relationships and Diagrams.

Module –IV**9**

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, black-box and white-box testing, verification and validation testing, system testing, the art of debugging.

Metrics for Process and Products: Software quality, metrics for analysis model, metrics for design model, metrics for source code, metrics for testing, metrics for maintenance, metrics for software quality.

Module –V**8**

Risk management: Reactive Vs proactive risk strategies, software risks, risk identification, risk projection, risk refinement, RMMM, RMMM plan.

Quality Management: Quality concepts, software quality assurance, software reviews, formal technical reviews, software reliability, the ISO 9000 quality standards.

TEXT BOOKS:

1. Software Engineering, A practitioner's Approach- Roger S. Pressman, 6th edition, McGraw Hill International Edition.
2. Software Engineering- Sommerville, 7th edition, Pearson Education.
3. The unified modelling language user guide Grady Booch, James Rumbaugh, Ivar Jacobson, Pearson Education.

REFERENCE BOOKS:

1. Software Engineering, an Engineering approach- James F. Peters, Witold Pedrycz, John Wiley.

3. Fundamentals of object-oriented design using UML Meiler page-Jones: Pe

DATABASE MANAGEMENT SYSTEMS

B.Tech. II Year

L T P C

3 0 0 3

Course Overview:

The purpose of this course is to provide a clear understanding of fundamentals with emphasis on their applications to create and manage large data sets. The course includes database design principles, normalization, concurrent transaction processing, security, recovery and file organization techniques. By using a DBMS, you can easily backup and recover the data. In addition, multi-user access to the database ensures that everyone can work together effectively.

Course Objectives: The students will try to learn

- Understand the role of database management system in an organization and learn the database concepts.
- Design databases using data modeling and Logical database design techniques.
- Construct database queries using relational algebra and calculus and SQL.
- Understand the concept of a database transaction and related concurrent, recovery facilities.
- Learn how to evaluate a set of queries in query processing

Course Outcomes: After successful completion of the course, students should be able to

- Apply knowledge of fundamentals of DBMS, Database Design
- Understand Relational Model, Relational Algebra and Calculus
- Master the basics of SQL for retrieval and management of data.
- Understand transaction processing and concurrency control.
- Use database storage structures and access techniques

Module - I

[8]

Database Systems: A Historical Perspective, File Systems versus a DBMS, Relational Model, Levels of Abstraction in a DBMS, Data Independence, Structure of DBMS.

Introduction to Database Design: Database Design and ER Diagrams, Entities, Attributes, and Entity Sets, Relationships and Relationship Sets, Additional Features of the ER Model, Conceptual Design with ER Model.

Module - II

[9]

Relational Model: Introduction, Integrity constraints over relations, enforcing integrity constraints, querying relational data, logical data base design, introduction to views, destroying/altering tables and views.

Relational Algebra and Calculus: Relational Algebra, Tuple relational Calculus, Domain relational calculus.

Module –III**[9]**

SQL: Queries, Constraints, Triggers: Form of basic SQL query, UNION, INTERSECT, and EXCEPT, Nested Queries, aggregation operators, NULL values, complex integrity constraints in SQL, triggers and active data bases.

Schema refinement: Problems caused by redundancy, Decompositions, problems related to decomposition, Reasoning about Functional Dependencies, FIRST, SECOND, THIRD normal forms, BCNF, Lossless join decomposition, Multi-valued dependencies, FOURTH normal form, FIFTH normal form.

Module –IV**[10]**

Transaction Management: ACID properties, Transactions and Schedules, Concurrent execution of transactions, Lock-based Concurrency control, Performance of locking, Transaction support in SQL, Introduction to crash recovery.

Concurrency control: Serializability and Recoverability, Introduction to lock management, Lock conversions, Dealing with dead locks, Specialized locking techniques, Concurrency control without locking.

Module – V**[9]**

Storage and Indexing: Data on External Storage, File Organization and Indexing, Cluster Indexes, Primary and Secondary Indexes, Index data Structures, Hash Based Indexing, Tree base Indexing, Comparison of File Organizations, Indexes and Performance Tuning

Tree structured Indexing: Intuitions for tree Indexes, Indexed Sequential Access Methods (ISAM), B+ Trees: A Dynamic Index Structure.

TEXTBOOKS:

1. Database Management Systems, Raghu Ramakrishanan, Johannes Gehrke, Tata McGraw Hill 3rd Edition
2. Database System Concepts, Silberschatz, Korth, McGraw hill, Vth edition

2430005: MATHEMATICAL AND STATISTICAL FOUNDATIONS
(CSM, CSD)

II Year B.Tech. I Sem

L T P C
3 1 0 4

Course Overview:

The student achieves the knowledge to analyze the problems using the probability and statistics. This course develop a skills in analyzing statistical data, skills in mathematical expectation, probability distribution, test of hypothesis for problems in engineering. Statistical models are used to identify, analyze and quantify potential risk through probability theory. It enables engineers to understand the risk associate with particular activities or situations, allowing them to take more effective steps to migrate them.

Pre-requisites: Mathematics courses of first year of study

Course Objectives: The student will try to learn

- The Concept of Random variables.
- Expectation and correlation.
- Probability distributions of single random variables.
- The sampling theory and the concept of Estimation.
- Testing of hypothesis and making statistical inferences.

Course outcomes: After successful completion of the course, students should be able to

CO1: Formulate and solve real world problems involving Random variables.

CO2: Correlate the concepts of one unit to the concepts in other units.

CO3: Identify probability distributions to various case studies.

CO4: Understand the concept of sampling and apply concept of Estimation.

CO5: Apply the concept of testing a hypothesis to case studies.

UNIT-I: Probability and Random Variables

10 L

Sample space, Events, Counting sample points, Probability of an Event, Additive Rules, Conditional Probability, Independent events, Product Rule and Baye's Rule (All rule without proof). Concept of a Random Variable, Discrete Probability Distributions, Continuous Probability Distributions.

UNIT-II: Mathematical Expectation and Correlation

10L

Expectation and Mean of a Random Variable, Variance and Covariance of Random Variables, Means and variances of Linear combinations of random variables, Marginal, Conditional and Joint Probability distributions. Statistical Independence. Correlation, Karl Pearson Correlation Coefficient and Spearman's rank correlation Coefficient.

UNIT-III: Probability distributions**10L**

Discrete Probability distributions: Binomial and Poisson distributions, statistical parameters for these distributions (without proof).

Continuous probability distributions: Normal and Uniform distributions, statistical parameters for these distributions (without proof).

UNIT-IV: Sampling Distribution & Estimation**8L**

Sampling Distributions: Random Sampling, Parameters and Statistics, Sampling Distribution of Means and the Central Limit Theorem, t - Distribution, F-Distribution and Chi-square distribution.

Estimation: Estimating the Mean, Standard Error of a Point Estimate, Confidence Intervals for single sample and two Samples.

UNIT-V: Test of Hypothesis**10L****10L**

Statistical Hypothesis, General Concepts, Testing a Statistical Hypothesis, Tests Concerning Large samples - Single Mean, Two Means, Single Proportion and two Proportions. Small samples- T-test for Single Mean and Two Means, Chi-square test for independence of attributes.

TEXT BOOKS:

1. Ronald E. Walpole, Raymond H. Myers, Sharon L. Myers, Keying Ye, Probability & Statistics For Engineers & Scientists, 9th Ed. Pearson Publishers.

2430507: DATA STRUCTURES
(COMMON TO ALL BRANCHES)

B.Tech. II Year I Sem.

L T P C
3 0 0 3

Course Overview:

Data structures are the fundamental building blocks of computer programming. They define how data is organized, stored, and manipulated within a program. Understanding data structures is very important for developing efficient and effective algorithms. In this Course, student will explore the most commonly used data structures, including **linked lists, stacks, queues, trees, and Hashing.**

Prerequisites:

- A course on “Essentials of Problem Solving using python”.

Course Objectives: The students will try to learn

- Various linear and non-linear data structures.
- How to perform operations on data structures.
- Priority Queues and Heaps
- Various searching and sorting techniques.
- Different hashing techniques

Course Outcomes: After successful completion of the course, students should be able to

- Develop solutions by using different types of linked lists
- Solve problems using stack and queue
- Learn different types of trees and their applications
- Implement and know the application of algorithms for searching and sorting.
- Design Programs using Hashing

Module -I: Linked Lists

[9]

Introduction to Data Structures, Linear list – singly linked list, Doubly linked list, Circular linked list - operations and its applications.

Module-II: Stack and Queue

[8]

Stacks- Introduction, Operations, array and linked representations of stacks, stack applications (Infix to postfix conversion and postfix evaluation),
Queues- Introduction, operations, array and linked representations of queues and its applications.

Module-III: Trees

[10]

Trees: General Trees, Binary Trees, Implementing Trees, Tree traversals

Search Trees: Binary Search Trees, Balanced search trees- AVL trees, B- trees

Priority Queue and Heaps: Priority queue ADT, Priority queue, Applications, Heap Trees, implementing a priority queue with a Heap, Heap Sort.

Module–IV: Searching and Sorting

[9]

Searching: Linear Search and Binary Search and its applications.

Sorting: Bubble sort, Selection sort, Insertion sort, Merge sort, Quick sort and its applications.

Module – V: Hashing

[8]

Introduction, Hash Functions-Modulo, Middle of Square, Folding, Collision Resolution Techniques- Separate Chaining, Open addressing,- Linear Probing, Quadratic Probing, Double Hashing.

TEXTBOOKS:

1. Fundamentals of data structures in C, E.Horowitz, S.Sahni and Susan Anderson Freed, 2nd Edition, Universities Press.
2. Data structures using C, A.S.Tanenbaum, Y. Langsam, and M.J. Augenstein, PHI/pearson education.

REFERENCES:

1. Data structures: A Pseudocode Approach with C, R.F.Gilberg And B.A.Forouzan, 2nd Edition, Cengage Learning.
2. Introduction to data structures in C, Ashok Kamthane, 1st Edition, PEARSON.

24X0574: DATA VISUALIZATION - POWER BI

B.Tech. II Year I Sem.

L T P C

0 0 2 1

Course Overview:

This course deals with report design and formatting in Power BI, which offers extraordinary visuals for building reports and dashboards. Additionally, gives acquaintance how to use report navigation to tell a compelling, data-driven story in Power BI.

Prerequisites: Nil

Course Objectives: The students will try to learn

- Importing of data from various sources.
- PowerBI Concepts
- Mapping of Visual Layouts and Graphical Properties.
- How to create Dashboard using PowerBI
- Developing of charts using PowerBI.

Course Outcomes: After successful completion of the course, students should be able to

- Understand How to import data into Power BI
- Understand Power BI concepts of Dimensions and Measures.
- Develop Programs and understand how to map Visual Layouts and Graphical Properties.
- Create a Dashboard that links multiple visualizations.
- Use graphical user interfaces to create Frames for providing solutions to real world problems.

List of Experiments:

1. Understanding Data, What is data, where to find data, Foundations for building Data Visualizations, Creating Your First visualization?
2. Getting started with Power BI Software using Data file formats, connecting your Data to Power BI , creating basic charts(line, bar charts, Tree maps),Using the Show me panel.
3. Power BI Calculations, Overview of SUM, AVR, and Aggregate features, Creating custom calculations and fields.
4. Applying new data calculations to your visualizations, Formatting Visualizations, Formatting Tools and Menus, Formatting specific parts of the view.
5. Editing and Formatting Axes, Manipulating Data in Power BI data, Pivoting Power BI data.
6. Structuring your data, Sorting and filtering Power BI data, Pivoting Power BI data.
7. Advanced Visualization Tools: Using Filters, Using the Detail panel, using the Size panels, customizing filters, Using and Customizing tooltips, Formatting your data with colors.
8. Creating Dashboards, adding interactivity to your Dashboard, Distributing & Publishing your Visualization.
9. Power BI file types, publishing to Power BI Online, Sharing your visualizations, printing, and Exporting.
10. Creating custom charts, cyclical data and circular area charts, Dual Axis charts.

REFERENCES:

1. Microsoft Power BI cookbook, Brett Powell, 2nd edition.
2. R Programming for Data Science by Roger D. Peng (References)
3. The Art of R Programming by Norman Matloff Cengage Learning India.

24X0573: DATABASE MANAGEMENT SYSTEMS LAB

B.Tech. II Year

L T P C

0 0 2 1

Course Overview:

The purpose of this course is to provide a clear understanding of fundamentals with emphasis on their applications to create and manage large data sets. The course includes database design principles, normalization, concurrent transaction processing, security, recovery and file organization techniques. By using a DBMS, you can easily backup and recover the data. In addition, multi-user access to the database ensures that everyone can work together effectively.

Course Objectives: The students will try to learn

- Developing of ER diagrams for the given problem.
- Design databases using data modeling and Logical database design techniques.
- Construction of database queries using relational algebra and calculus and SQL.
- The concept of a database transaction and related concurrent, recovery facilities.
- Creation of triggers, stored procedures and cursors.

Course Outcomes: After successful completion of the course, students should be able to

- Develop ER diagram for the given problem.
- Understand Relational Model, Relational Algebra and Calculus
- Master the basics of SQL for retrieval and management of data.
- Creation of triggers
- Use stored procedures and cursors.

Problem statement

"Roadway Travels" is in business since 1997 with several buses connecting different places in india. Its main office is located in Hyderabad.

The company wants to computerize its operations in the following areas:

- Reservation and Ticketing
- Cancellations

Reservation & Cancellation:

Reservations are directly handled by booking office. Reservations can be made 30 days in advance and tickets issued to passenger. One Passenger/person can book many tickets (to his/her family).

Cancellations are also directly handed at the booking office.

In the process of computerization of Roadway Travels you have to design and develop a Database which consists the data of Buses, Passengers, Tickets, and

Reservation and cancellation details. You should also develop query's using SQL to retrieve the data from database.

The above process involves many steps like

1. Analyzing the problem and identifying the Entities and Relationships,
2. E-R Model
3. Relational Model
4. Normalization
5. Creating the database
6. Querying.

Students are supposed to work on these steps week wise and finally create a complete "Database System" to Roadway Travels. Examples are given at every experiment for guidance to students.

Experiment 1: E-R Model

Analyze the carefully and come up with the entities in it. Identify what data has to be persisted in the database. This contains the entities, attributes etc.

Identify the primary keys for all the entities. Identify the others keys like candidate keys, partial keys, if any.

Example: Entities:

1. BUS
2. Ticket
3. Passenger

Relationships:

1. Reservation
2. Cancellation

PRIMARY KEY ATTRIBUTES:

Ticket ID (Ticket Entity)

Passport ID (Passenger Entity)

Bus_No (Bus Entity)

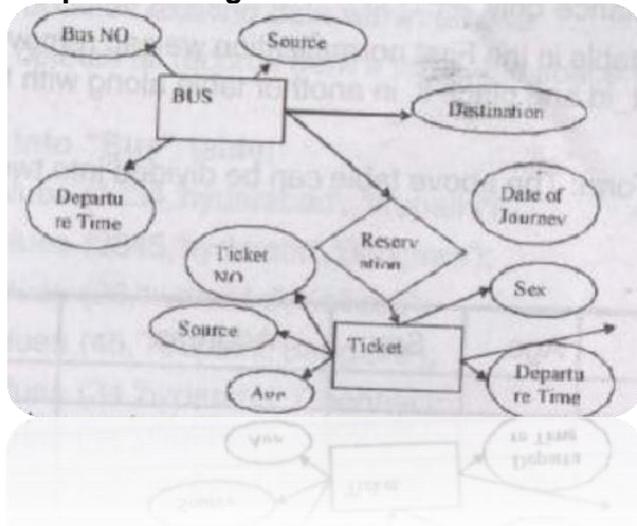

A part from the above mentioned entities you can identify more. The above mentioned are few.

Note: The students is required to submit a document by writing the Entities and keys to the lab teacher.

Experiment 2: Concept design with E-R Model

Relate the entities appropriately. Apply cardinalities for each relationship. Identify strong entities and weak entities (if any). Indicate the type of relationships (total / partial). Try to incorporate generalization, aggregation, specialization etc wherever required.

Example: E-R diagram for bus

Note: The students is required to submit a document by drawing the E-R Diagram.

Experiment 3: Relational Model

Represent all the entities (Strong, Weak) in tabular fashion. Represent relationships in a tabular fashion. There are different ways of representing relationships as tables based on the requirement. Different types of attributes (Composite, Multi-valued, and Derived) have different way of representation.

Example: The passenger tables look as below. This is an example. You can add more attributes based on E-Rmodel. This is not a normalized table.

Passenger

Name	Age	Sex	Address	Ticket_id	Passport ID

Note: The students is required to submit a document by Represent relationships in a tabular fashion to the labteacher.

Experiment 4: Normalization

Database normalization is a technique for designing relational database tables to minimize duplication of information and, in so doing, to safeguard the database against certain types of logical or structural problems, namely data anomalies. For example, when multiple instances of a given piece of information occur in a table, the possibility exists that these instances will not be kept consistent when the data within the table is updated, leading to a loss of data integrity. A table that is sufficiently normalized is less vulnerable to problems of this kind, because its structure reflects the basic assumptions for when multiple instances of the same information should be represented by a single instance only. For the above table in the First normalization we can remove the multiple valued attribute Ticket_id and place it in another table along with the primary key of passenger.

First Normal Form: The above table can divided into two tables as shown below. Passenger

Name	Age	Sex	Address	Passport ID

Passport ID	Ticket_id

You can do the second and third normal forms if required. Any how Normalized tables are given at the end.

Experiment 5: Installation of MySQL and practice DDL commands

Installation of MySQL. In this week you will learn Creating databases, How to create tables, altering the database, dropping tables and databases if not required. You will also try truncate, rename commands etc.

Example for creation of a normalized "Passenger" table. CREATE TABLE

```
Passenger(
  Passport_id
  INTEGER
  PRIMARY
  KEY,Name
  VARCHAR(50
  ) NOT NULL,
  Age INTEGER
  NOT NULL,
  Sex CHAR,
  Address VARCHAR(50) NOT NULL
);
```

Similarly create all other tables.

Note: Detailed creation of tables is given at the end.

Experiment 6: Practicing DML commands

DML commands are used for managing data within schema objects. Some examples:

- SELECT - retrieve data from the database
- INSERT - insert data into a table
- UPDATE - updates existing data within a table
- DELETE - deletes all records from a table, the space for the records remain

insert values into "Bus" table:

```
insert into Bus values (1234, 'hyderabad', 'tirupathi');
```

insert values into "Passenger" table:

```
insert into Passenger values(1, 45,
'ramesh', 45, 'M', 'abc123');insert
into Passenger values(56, 22,
'seetha', 32, 'F', 'abc55');
```

Few more Examples of DML commands:

```
SELECT * FROM Bus; (selects all
the attributes and displays)
UPDATE Bus SET Bus_No = 1
WHERE Bus_No = 2;
```

Experiment 7: Querying

In this week you are going to practice queries(along with sub queries) using ANY,

ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSECT, Constraints etc.

Practice the following Queries:

- Display unique PNR_No of all passengers.
- Display all the names of male passengers.
- Display the ticket numbers and names of all the passengers.
- Find the ticket numbers of the passengers whose name start with 'r' and ends with 'h'.
- Find the names of passengers whose age is between 30 and 45.
- Display all the passengers names beginning with 'A'
- Display the sorted list of passengers names.

Experiment 8 and Experiment 9: Querying (continued...)

You are going to practice queries using Aggregate functions (COUNT, SUM, AVG, MAX, and MIN), GROUP BY, HAVING and Creation and dropping of VIEWS.

- Write a Query to display the information present in the Passenger and cancellation tables. Hint: Use UNION Operator.
- Display the number of days in a week on which the 9W01 bus is available.
- Find number of tickets booked for each PNR_No using GROUP BY CLAUSE. Hint: Use GROUP BY on PNR_No.
- Find the distinct PNR numbers that are present.
- Find the number of tickets booked by a passenger where the number of seats is greater than 1. Hint: Use GROUP BY, WHERE and HAVING CLAUSES.
- Find the total number of cancelled seats.

Experiment 10: Triggers

. Creation of insert trigger, delete trigger, update trigger. Practice triggers using the above database.

E.g:

```
CREATE TRIGGER updatecheck BEFORE UPDATE ON passenger FOR
EACH ROW BEGIN
IF NEW.TicketNO > 60 THEN
SET New.TicketNO = TicketNo; ELSE
SET New.TicketNo = 0; END IF;
END
```

Experiment 11; Procedures

Creation of stored procedure, Execution of procedure and modification of procedure. Practice procedures using the database.

E.g:

```
CREATE PROCEDURE myproc() BEGIN
SELECT COUNT(Tickets) FROM Ticket
WHERE age >= 40; END;
```

Experiment 12: Cursors

In this week you need to do the following: Declare a cursor that defines a result set. Open the cursor to establish the result set. Fetch the data into local variables as needed from the cursor, one row at a time. Close the cursor when done

```
CREATE PROCEDURE
myproc(in_customer_id INT)
BEGIN
```

```

DECLARE v_id INT;
DECLARE v_name VARCHAR(30);

DECLARE c1 CURSOR FOR
SELECT stdid, stdFirstname FROM studentsss WHERE stdid = in_customer_id;

OPEN c1;
FETCH c1 INTO v_id, v_name; CLOSE c1;
END;
Tables:

```

BUS

Bus No: VARCHAR : PK(primary key) Source: VARCHAR
Destination: VARCHAR

Passenger

PPNO: VARCHAR(15) : PK Name: VARCHAR(15)
Age: INT(4)
Sex: CHAR(10) : Male/Female Address: VARCHAR(20) **Passenger_Tickets**

24X0575: DATA STRUCTURES LAB USING PYTHON

L T P C
0 0 2 1

Course Overview:

Data structures are the fundamental building blocks of computer programming. They define how data is organized, stored, and manipulated within a program. Understanding data structures is very important for developing efficient and effective algorithms. In this Course, student will explore the most commonly used data structures, including linked **lists, stacks, queues, trees, and Hashing.**

Prerequisites:

- A course on “Essentials of Problem Solving”.

Course Objectives:

 The students will try to learn

- Various linear and non-linear data structures.
- How to perform operations on data structures.
- Priority Queues and Heaps
- Various searching and sorting techniques.
- Different hashing techniques

Course Outcomes:

 After successful completion of the course, students should be able to

- Develop solutions by using different types of linked lists
- Solve problems using stack and queue
- Learn different types of trees and their applications
- Implement and know the application of algorithms for searching and sorting.
- Design Programs using Hashing

List of Experiments

1. Write a program that uses functions to perform the following operations on singly linked list.: i) Creation ii) Insertion iii) Deletion iv) Traversal
2. Write a program that uses functions to perform the following operations on doubly linked list.: i) Creation ii) Insertion iii) Deletion
3. Write a program that uses functions to perform the following operations on circular linked list: i) Creation ii) Insertion iii) Deletion
4. Write a program that implement stack operations using i) Arrays ii) Pointers

5. Write a c program to implement infix to postfix conversion using stack.
6. Write a c program to implement postfix evaluation.
7. Write a program that implement Queue operations using i) Arrays ii) Pointers
8. Write a program to implement the tree traversal methods using both recursive and non-recursive.
9. Write a program to implement tree operations on i) AVL Trees ii) B Trees iii) Heap
10. Write a program that implements the following sorting methods to sort a given list of integers in ascending order i) Bubble sort ii) Selection sort iii) Insertion sort
11. Write a program that implements the following sorting methods to sort a given list of integers in ascending order i) Merge sort ii) Quick sort iii) Heap Sort
12. Write a program that use both recursive and non-recursive functions to perform the following searching operations for a Key value in a given list of integers: i) Linear search ii) Binary search
13. Write a program to implement hashing.

CASE STUDY-1 Balanced Brackets

A bracket is considered to be any one of the following characters: (,), {, }, [, or].

Two brackets are considered to be a *matched pair* if the an opening bracket (i.e., (, [, or {) occurs to the left of a closing bracket (i.e.,),], or }) *of the exact same type*. There are three types of matched pairs of brackets: [], {}, and ().

A matching pair of brackets is *not balanced* if the set of brackets it encloses are not matched. For example, {[(I)]} is not balanced because the contents in between { and } are not balanced. The pair of square brackets encloses a single, unbalanced opening bracket, (, and the pair of parentheses encloses a single, unbalanced closing square bracket,].

By this logic, we say a sequence of brackets is *balanced* if the following conditions are met:

- It contains no unmatched brackets.
- The subset of brackets enclosed within the confines of a matched pair of brackets is also a matched pair of brackets.

Given strings of brackets, determine whether each sequence of brackets is balanced. If a string is balanced, return YES. Otherwise, return NO.

CASE STUDY-2 Minimum Average Waiting Time

Mr. Raju owns a pizza restaurant and he manages it in his own way. While in a normal restaurant, a customer is served by following the first-come, first-served rule, Raju simply minimizes the average waiting time of his customers. So he gets to decide who is served first, regardless of how sooner or later a person comes.

Different kinds of pizzas take different amounts of time to cook. Also, once he starts cooking a pizza, he cannot cook another pizza until the first pizza is completely cooked. Let's say we have three customers who come at time $t=0$, $t=1$, & $t=2$ respectively, and the time needed to cook their pizzas is 3, 9, & 6 respectively. If Raju applies first-come, first-served rule, then the waiting time of three customers is 3, 11, & 16 respectively. The

average waiting time in this case is $(3 + 11 + 16) / 3 = 10$. This is not an optimized solution. After serving the first customer at time $t=3$, Raju can choose to serve the third customer. In that case, the waiting time will be 3, 7, & 17 respectively. Hence the average waiting time is $(3 + 7 + 17) / 3 = 9$.

Help Raju achieve the minimum average waiting time. For the sake of simplicity, just find the integer part of the minimum average waiting time.

Note:

- The waiting time is calculated as the difference between the time a customer orders pizza (the time at which they enter the shop) and the time she is served.
- Cook does not know about the future orders.

2430598: PARALLEL COMPUTATION: RUST

B.Tech. II Year I Sem.

L	T	P	C
0	0	2	1

Module I – Basics of Rust

1. **Hello, World!**
 - Basic Rust program structure using `fn main()`.
2. **Variable Declaration and Mutability**
 - Using `let`, `mut`, and type inference.
3. **Data Types Demo**
 - Use `i32`, `f64`, `char`, `bool`, etc., in a single program.
4. **Arithmetic and Logical Operators**
 - Calculator-style program showing arithmetic and logical operations.
5. **Using `cargo` for a Simple Project**
 - Create a simple project using `cargo new`, `build`, and run it.

Module II – Ownership and Control Flow

6. **Ownership Transfer**
 - Pass variables to functions and explore ownership and `move`.
7. **Borrowing and References**
 - Demonstrate `&T` and `&mut T` references and restrictions.
8. **Lifetimes Example**
 - Use lifetime annotations in a function returning references.
9. **If-Else Statement**
 - Even/odd checker or grade calculator.
10. **Looping Examples**
 - Use `for`, `while`, and `loop` to iterate over arrays or counters.
11. **Pattern Matching with `match`**
 - Match numbers to print weekdays or match enums.
12. **Nested Control Statements**
 - Combine loops and conditionals in one program (e.g., a simple number guessing game).

Module III – Functions and Structs

13. **Functions with Arguments and Return Values**
 - Create a function to calculate factorial or square of a number.

14. Ownership in Functions

- Pass by value vs. reference in function parameters.

15. Using Structs

- Define a `Rectangle` struct and calculate area.

16. Tuple Structs and Field Init Shorthand

- Define a `Color(u8, u8, u8)` and use field shorthand for init.

17. Enums and Pattern Matching

- Define an `enum` for `TrafficLight` and match its values.

18. Option Enum Usage

- Safe division function returning `Option<f64>`.

Module IV – Project Management and Smart Pointers

19. Error Handling with Result

- File reading or division with error handling using `Result`.

20. Using Box, Rc, and RefCell

- Demonstrate smart pointers with a simple linked list or counter program.

Module- V – Object oriented Programming

21. "Polymorphic Behavior with Trait Objects: A Speakable Animal Zoo"

Covers: Traits, dynamic dispatch, trait objects (`&dyn Trait`)

22. "Implementing Strategy Pattern with Traits for Payment Processing"

Covers: Object-oriented design using traits and `Box<dyn Trait>` for dynamic strategy switching

23. "Trait-Based Drawing Application with Heterogeneous UI Components"

Covers: Object-oriented characteristics, trait objects, and allowing different drawable types in a single collection

II-II

24X6606: COMPUTER SYSTEM ARCHITECTURE

B.Tech. II Year

L T P C

3 1 0 4

Course Overview:

This course introduces the concepts of Digital Computer and the basic Structure of each component. The course majorly works on Data Representation, Decoders, Multiplexers and Memory Unit, Design of Hardwired & Micro Control unit, I/O interface, Array processing units, Instruction pipeline, vector processing, multi-processor and characteristics of multi-processor.

Prerequisites:

- NIL

Course Objectives: The students will try to learn

- The functional blocks of Digital Computer, Logic gates and Flip-flops
- Digital Components, Data Representation & Error Detection Codes
- How to perform Register Transfer Micro Operations and Programming Basic Computer.
- Basic processing units and Different Memory systems
- About Pipeline and vector processing units along with I/O Organization

Course Outcomes: After successful completion of the course, students should be able to

- Understand the basic components of Digital computer.
- Demonstrate different types of Digital components and their functional units of a digital computer.
- Evaluate Different types of Micro operations on registers stored in digital computers
- Design Basic Processing units like Hardwired, Micro programmed control unit & memory.
- Design a I/O Interface for communicating with different pipelines

Module-I

[12]

Digital Logic Circuits: Digital Computers, logic gates, Boolean algebra, map simplifications, combination circuits, Flip Flops, Sequential circuits, Flip Flop Design Procedure.

Module – II

[8]

Digital Components: Decoders, Multiplexers, Registers, Binary Counters, Memory Unit

Data Representation: Data Types, Complements, Fixed Point representation, Floating point representation, other binary codes, Error detection codes.

Module–III**[9]**

Register Transfer and Micro Operations: register transfer language, register transfer, bus and memory transfer, arithmetic, logic and shift micro operations, arithmetic logic shift unit.

Programming Basic Computer: Machine Language, Assembly language, Assembler, Programming loops, Programming arithmetic and logic operations, Subroutines.

Module–IV**[9]**

Basic Processing Unit: Hardwired Control, Micro programmed Control

Memory Systems: Memory Hierarchy, Main memory, cache memories, virtual memory, secondary storage, memory management hardware.

Module–V**[9]**

Input / Output Organization: Introduction to I/O, I/O interface, Modes of transfer, Direct memory access.

Pipeline and Vector Processing: Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline, Vector Processing, Array Processor.

Multi Processors: Characteristics of Multiprocessors

24X0510: OPERATING SYSTEMS

L T P C
3 0 0 3

Course Overview:

Operating Systems course provides theoretical knowledge about the structure of operating systems, process, memory management and virtual memory implementation principles, input-output management and deadlock avoidance, file system structure. The Operating System manages the computer's software and hardware as well as its memory and processes. Computer operating systems also allow users to see information, create and save files, and use applications such as email and web browsers. Various applications of operating systems include security, job accounting, error detection aids, coordination between other software's and users.

Prerequisites:

- A course on Problem solving Using c and c++

Course Objectives:

 The students will try to learn

- Describes functionalities of main components in operating systems.
- Analyze the algorithms used in process management.
- Gives synchronization and deadlock concepts.
- Analyze the algorithms used in memory management.
- Interpret the concepts of input and output storage for file management

Course Outcomes:

 After successful completion of the course, students should be able to

- Control accesses a computer and the files that may be shared
- Gain knowledge on process and Process Scheduling
- Understand Deadlock Prevention, Deadlock Handling and Synchronization
- Apply Memory Management techniques in OS.
- Understand File System.

Module-I

[10]

Operating System Introduction: What is an operating system do, computer system organization, computer system architecture, operating system structure- operating system operations, process management, memory management, operating system services, System Calls, types of system calls.

Module –II

[9]

Process: process concepts, process scheduling, operations on processes, Interprocesses communication, multithreading models, thread libraries.

Process Scheduling: Scheduling criteria, scheduling algorithms, thread scheduling

Multiple- Processor Scheduling.

Module –III **[9]**

Deadlocks- System Model, Deadlocks Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, and Recovery from Deadlock.

Synchronization: background, the critical section problem, peter's solution, Synchronization hardware, semaphores, Classical Problems of Synchronization, Monitors.

Module –IV **[8]**

Memory Management and Virtual Memory –background, Swapping, Contiguous Allocation, Paging structure of the page table, Segmentation.

Virtual memory: background, demand paging page replacement allocation of frames thrashing.

Module –V **[8]**

File System : File system and implementing file system, file concept access methods, directory and file system structure, File system implementation, Directory implementation, Allocation methods, Free-space Management, efficiency and performance, recovery, NFS.

TEXT BOOKS:

1. Operating System Principles- Abraham Silberchatz, Peter B. Galvin, Greg Gagne 7th Edition, JohnWiley
2. Advanced programming in the Unix environment, W.R.Stevens, Pearson education.

24X0508: DESIGN AND ANALYSIS OF ALGORITHMS

L T P C
2 0 0 2

Course Overview:

Design and Analysis of Algorithms is a fundamental aspect of computer science that involves creating efficient solutions to computational problems and evaluating their performance. DSA focuses on designing algorithms that effectively address specific challenges and analyzing their efficiency in terms of time and space complexity.

Prerequisites:

- A course on “Data structures”.

Course Objectives:

 The students will try to learn

- Asymptotic performance of algorithms
- Algorithm design strategies to solve science and engineering problems.
- Concepts greedy method and dynamic programming. Applying for several applications like knapsack problem, job sequencing with deadlines, and optimal binary search tree, TSP and so on respectively.
- The methods of backtracking and branch bound techniques to solve the problems like n-queens problem, graph colouring and TSP respectively.
- Concepts of deterministic and non-deterministic algorithms

Course Outcomes:

 After successful completion of the course, students should be able to

- Compare asymptotic behavior of functions derived from algorithms
- Use Divide and Conquer strategy to address real time problems
- Apply greedy algorithmic design paradigm to solve problems
- Design algorithms using Dynamic Programming and backtracking strategy
- Develop algorithms for problems using branch & bound algorithm design techniques and understand NP-Hard and NP- Complete problems

UNIT-I

Module - I

[10]

Introduction: Algorithm, Recurrence Relations ,Performance Analysis-Space complexity, Time complexity, Asymptotic Notations- Big oh notation, Omega notation, Theta notation and little oh notation.

Disjoint Sets: Introduction, union and find Operations.

Module- II [8]
Divide and conquer: General method, applications-Binary search, Quick sort, Merge sort, Strassen's matrix multiplication

Module -III [9]
Greedy method: General method, applications- knapsack problem, Job sequencing with deadlines, Minimum cost spanning trees, Single source shortest path problem.
Dynamic Programming: General method, applications- All pairs shortest path problem, Optimal binary search trees

Module-IV [10]
Dynamic Programming: 0/1 knapsack problem, Reliability design ,Traveling sales person problem.
Backtracking: General method, applications, n-queen's problem, sum of subsets problem, graph coloring, Hamiltonian cycles

Module- V [9]
Branch and Bound: General method, applications - 0/1 knapsack problem, LC Branch and Bound solution, FIFO Branch and Bound solution, , Travelling sales person problem,
NP-Hard and NP-Complete problems: Basic concepts, non deterministic algorithms, NP - Hard and NP- Complete classes, Cook's theorem

TEXTBOOKS:

1. Fundamentals of Computer Algorithms, Ellis Horowitz, SatrajSahni and Raja sekharan, University Press.

REFERENCES:

1. Design and Analysis of algorithms, Aho, Ullman and Hopcroft, Pearson education.
2. Introduction to Algorithms, second edition, T.H.Cormen, C.E.Leiserson, R.L.Rivest, and C.Stein, PHI Pvt. Ltd./ Pearson Education.
3. Algorithm Design: Foundations, Analysis and Internet Examples, M.T. Goodrich and R. Tamassia, John Wiley and sons.

24X0511: OOPS Through JAVA

B.Tech. II Year II – Sem.

L T P C

3 0 0 3

Course Overview:

OOPs Through java makes it possible to create full reusable applications with less code and sorted development time. This course is about the fundamentals of Object-Oriented Programming (OOP) Concept and OOP-based software development methodology. It encourages modular objects for reusable code, ensure well organize and maintainable code via encapsulation, inheritance and polymorphism. OOP finds broad application in software development domains:

- Software Development
- GUI Development
- Game Development
- Database Systems
- Simulation and Modeling

Prerequisites:

- A course on Problem Solving Using C and C++

Course Objectives: The students will try to learn

- Concepts and features of object oriented programming
- Java Standard API library such as util, io, applets, GUI based controls.
- Exception handling mechanism, multithreading, packages and interfaces.
- How to use Collection framework
- Internet programming using applets and AWT.

Course Outcomes: After successful completion of the course, students should be able to

- Solve real world problems using OOP concepts.
- Understand the use of abstract classes and Interfaces
- Develop multithreaded applications with synchronization.
- Solve problems using java collection framework
- Develop applications using Event Handling

Module - I

[10]

Principles of OOPS: OOPS Paradigm, Objects, Classes and Methods, Abstraction, Encapsulation, Inheritance, Polymorphism, Dynamic Binding.

JAVA Introduction: History of Java, Java buzzwords, data types, variables, scope and life time of variables, Type conversion and casting, arrays, operators, Operator Precedence, control statements.

Java String Handling: String Constructors, Special string operations, Character Extraction, String Comparisons, Modifying a string, String Buffer.

Module - II

[9]

Classes: Class fundamentals, Declaring Objects, methods, Constructors, this keyword, garbage collection, Overloading methods and constructors, Recursion.

Inheritance, Packages and Interfaces – Inheritance basics, Using super, Creating a multilevel hierarchy, method overriding, Dynamic method dispatch, abstract classes, Using final with inheritance, Defining a package, Finding package and class path, Access protection, importing packages, Defining an interface, implementing interface, applying interfaces, variables in interface and extending interfaces.

Module –III

[9]

Exception handling - Exception types, uncaught exceptions, using try and catch, Multiple catch classes, nested try statements, throw, throws and finally. Java's built-in exceptions, creating own exception sub classes.

Multithreading - Thread life cycle, Thread Creation using thread class and runnable interface, Creating multiple threads, Thread priorities, Synchronizing threads, Inter thread communication.

Module –IV

[9]

Collections Framework: Overview, Collection Interfaces, Collection Classes, Accessing a collection via Iterator, Working with Maps

Java Database Connectivity: Types of Drivers, JDBC architecture, JDBC Classes and Interfaces, Basic steps in Developing JDBC Application, Creating a New Database and Table with JDBC.

Module– V

[9]

GUI Programming with Swing – Introduction, limitations of AWT, MVC architecture, components, containers, Layout Manager Classes, Simple Applications using AWT and Swing.

Event Handling- The Delegation event model- Events, Event sources, Event Listeners, Event classes, Handling mouse and keyboard events, Adapter classes.

TEXT BOOKS:

1. Java The complete reference, 9th edition, Herbert Schildt, McGraw Hill Education (India) Pvt. Ltd.
2. Understanding Object-Oriented Programming with Java, updated edition, T. Budd, Pearson Education.(Principles of OOPS in UNIT-

l)

REFERENCES:

1. An Introduction to programming and OO design using Java, J. Nino and F.A. Hosch, John Wiley & sons
2. Introduction to Java programming, Y. Daniel Liang, Pearson Education.
3. Object Oriented Programming through Java, P. Radha Krishna, University Press.
4. Programming in Java, S. Malhotra, S. Chudhary, 2nd edition, Oxford Univ. Press.
5. Java Programming and Object-oriented Application Development, R. A. Johnson, Cengage Learning

FORMAL LANGUAGES AND AUTOMATA THEORY

B.Tech. II Year II – Sem.

L T P C

3 0 0 3

Course Overview:

Automata Theory provides a simple, elegant view of the complex machine that we call a computer. Automata theory is a branch of computer science that studies abstract machines and the computational problems that can be solved using them. The theory has been used to develop a wide range of applications, from computer science and mathematics to engineering, biology, and physics. However, like any scientific theory, automata theory has its limitations and applications that are worth exploring.

Prerequisites:

- A course on “Data Structures”.

Course Objectives: The students will try to learn

- Basic properties of deterministic and nondeterministic finite automata
- Relation between types of languages and types of finite automata
- Context free languages and Grammer's, and also Normalizing CFG.
- Concept of Pushdown automata and its application.
- Basic properties of Turing machines and computing with Turing machines

Course Outcomes: After successful completion of the course, students should be able to

- Understand the concept of abstract machines and their power to recognize the languages.
- Employ finite state machines for modeling and solving computing problems.
- Design context free grammars for formal languages.
- Design push down automata for context free languages
- Design Turing Machines for recursive and recursive enumerable languages.

Module-I

[10]

Introduction to Finite Automata: Structural Representations, Automata and Complexity, the Central Concepts of Automata Theory – Alphabets, Strings, Languages, Problems.

Non deterministic Finite Automata: Formal Definition, an application, Text Search, Finite Automata with Epsilon-Transitions. Deterministic Finite Automata: Definition of DFA, How A DFA Process Strings, The language of DFA, Conversion of NFA with ϵ -transitions to NFA without ϵ -transitions. Conversion of NFA to DFA.

Module-II

[9]

Regular Expressions: Finite Automata and Regular Expressions, Applications of Regular Expressions, Algebraic Laws for Regular Expressions, Conversion

of Finite Automata to Regular Expressions. Pumping Lemma for Regular Languages, Statement of the pumping lemma, Applications of the Pumping Lemma. Closure Properties of Regular Languages: Closure properties of Regular languages, Decision Properties of Regular Languages, Equivalence and Minimization of Automata.

Module–III

[9]

Context-Free Grammars: Definition of Context-Free Grammars, Derivations Using a Grammar, Leftmost and Rightmost Derivations, the Language of a Grammar, Sentential Forms, Parse Trees, Applications of Context-Free Grammars, Ambiguity in Grammars and Languages.

Normal Forms for Context- Free Grammars: Eliminating useless symbols, Eliminating ϵ - Productions. Chomsky Normal form Griebach Normal form. Pumping Lemma for Context-Free Languages: Statement of pumping lemma.

Module–IV

[10]

Push Down Automata: Definition of the Pushdown Automaton, the Languages of a PDA, Equivalence of PDA's and CFG's, Acceptance by final state, Acceptance by empty stack, Deterministic Pushdown Automata. Conversion of CFG to PDA. Applications Closure Properties of Context-Free Languages: Closure properties of CFL's, Decision Properties of CFL's.

Module–V

[8]

Turing Machine: Introduction to Turing Machine, Formal Description, Instantaneous description, The language of a Turing machine, Types of Turing machine: Turing machines and halting.

Undecidability: Undecidability, A Language that is Not Recursively Enumerable, An Undecidable Problem That is RE, Undecidable Problems about Turing Machines, Recursive languages, Properties of recursive languages, Post's Correspondence Problem, Modified Post Correspondence problem, Other Undecidable Problems, Counter machines.

TEXTBOOKS:

1. Introduction to Automata Theory, Languages, and Computation, 3rd Edition, John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman, Pearson Education.
2. Theory of Computer Science – Automata languages and computation, Mishra and Chandra shekaran, 2nd edition, PHI.

REFERENCES:

1. Introduction to Languages and The Theory of Computation, John C Martin, TMH.
2. Introduction to Computer Theory, Daniel I.A. Cohen, John Wiley.
3. A Text book on Automata Theory, P. K. Srimani, Nasir S. F. B, Cambridge University Press

2430577: OPERATING SYSTEMS LAB

B.Tech. II Year I Sem.

L T P C
0 0 2 1

Prerequisites:

- A course on “Programming for Problem Solving”
- A course on “Data Structures”.

Course Outcomes: The students will be able to:

- Simulate and implement operating system concepts such as scheduling, deadlock management, file management and memory management.
- Implement C programs using Unix system calls.

LISTOFEXPERIMENTS

1. Write C programs to simulate the following CPU Scheduling algorithms
a) FCFS b) SJF c) Round Robin d) priority
2. Write programs using the I/O system calls of UNIX/LINUX operating system
(open, read, write, close, fcntl, seek, stat, opendir, readdir)
3. Write a C program to simulate Bankers Algorithm for Deadlock Avoidance and Prevention.
4. Write a C program to implement the Producer – Consumer problem using semaphores using UNIX/LINUX system calls.
5. Write C programs to illustrate the following IPC mechanisms
a) Pipes b) FIFOs c) Message Queues d) Shared Memory
6. Write C programs to simulate the following memory management techniques
a) Paging b) Segmentation

TEXTBOOKS:

1. Operating System Principles- Abraham Silberchatz, Peter B. Galvin, Greg Gagne 7th Edition, John Wiley
2. Advanced programming in the Unix environment, W.R.Stevens, Pearson education.

REFERENCEBOOKS:

1. Operating Systems – Internals and Design Principles Stallings, Fifth Edition–2005,Pearson Education/PHI
2. Operating System A Design Approach-Crowley,TMH.

4. Unix programming environment, Kernighan and Pike, PHI. / Pearson Education
5. Unix Internals The New Frontiers, U.Vahalia, Pearson Education

DESIGN AND ANALYSIS OF ALGORITHMS LABORATORY

L T P C

0 0 2 1

Prerequisites: Problem Solving Using C and C++, Essentials of Problem solving Using Python, OOPS Through JAVA

Course Outcomes:

The students should be able to

- Develop the feasible and optimal solutions using Greedy method
- Develop the feasible and optimal solutions using dynamic programming.
- Develop the feasible and optimal solutions using Backtracking
- Develop the feasible and optimal solutions using Dynamic programming

Experiments: Write a C/ Java/ Python program to implement the following

1. Knapsack problem using greedy method.
2. Prim's minimum cost spanning tree using Greedy Method
3. Kruskal's minimum cost spanning tree using Greedy Method
4. Job sequencing with deadlines using Greedy Method
5. Single source shortest path problem using Greedy Method
6. All pairs Shortest path using Dynamic Programming
7. Optimal Binary Search Tree using Dynamic Programming
8. 0/1 Knapsack problem using Dynamic Programming
9. n-Queen's problem using backtracking method.
10. Sum of subsets using backtracking method.
11. Graph Coloring using backtracking method.
12. Travelling sales person using branch and bound, Dynamic programming

TEXT BOOKS:

1. Fundamentals of Computer Algorithms, Ellis Horowitz, SatrajSahni and Rajasekharan, University Press.

REFERENCE:

- Exception handling mechanism, multithreading, packages and interfaces.
- How to use Collection framework
- Internet programming using applets and AWT.

Course Outcomes: After successful completion of the course, students should be able to

- Solve real world problems using OOP concepts.
- Understand the use of abstract classes and Interfaces
- Develop multithreaded applications with synchronization.
- Solve problems using java collection framework
- Develop applications using Event Handling

UNIT-I:

List of Experiments:

1. a) Use Eclipse or Net bean platform and acquaint with the various menus. Create a test project, add a test class, and run it. See how you can use auto suggestions, auto fill. Try code formatter and code refactoring like renaming variables, methods, and classes. Try debug step by step with a small program of about 10 to 15 lines which contains at least one if else condition and a for loop.

- b) Write a java program that prints all real solutions to the quadratic equation $ax^2 + bx + c = 0$. Read in a, b, c and use the quadratic formula.
- c) Write a java program to implement Fibonacci series.
- d) Write a java program to print prime numbers between 1 to 100.
2. a) Write a java program to implement method overloading and constructors overloading.
- b) Write a java program to implement method overriding.
3. a) Write a java program to check whether a given string is palindrome.
- b) Write a Java program to create an abstract class named Shape that contains two integers and an empty method named print Area (). Provide three classes named Rectangle, Triangle, and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.
4. a) Write a Java program that creates a user interface to perform integer divisions. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num 2 is displayed in the Result field when the Divide button is clicked. If Num1 or Num2 were not an integer, the program would throw a Number Format Exception. If Num2 were Zero, the program would throw an Arithmetic Exception. Display the exception in a message dialog box.
- b). Write a java program to create user defined exception class and test this class.
5. a) Write a Java program to list all the files in a directory including the files present in all its subdirectories.
- b) Write a java program that displays the number of characters, lines and words in a text file.
6. a) Write a Java program that implements a multi-thread application that has three threads. First thread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.
- b) Write a Java program that correctly implements the producer – consumer problem using the concept of inter thread communication.
7. Write a Java program that loads names and phone numbers from a text file where the data is organized as one line per record and each field in a record are separated by a tab (\t). It takes a name or phone number as input and prints the

corresponding other value from the hash table (hint: use hash tables).

8. Write Java Programs to perform following:
 - a. To count occurrence of each character in a string.
 - b. To remove duplicate words from a string.
 - c. To print all permutations of a string.

9. Write programs to implement following using Collection Framework:
 - a. to add, retrieve & remove element from ArrayList
 - b. to Sort & reverse the LinkedList elements
 - c. to sort ArrayList using Comparable and Comparator

10. Write programs to implement following using Collection Framework:
 - a. to copy elements from HashSet to Array
 - b. to remove duplicate key from hashtable
 - c. to iterate TreeMap

11. Suppose that a table named Table.txt is stored in a text file. The first line in the file is the header, and the remaining lines correspond to rows in the table. The elements are separated by commas. Write a java program to display the table using Labels in Grid Layout.

12. a) Write a Java program that handles all mouse events and shows the event name at the center of the window when a mouse event is fired (Use Adapter classes).
b) Write a java program to demonstrate the key event handlers.

24X0597: NoSQL Data Bases(MongoDB)

L	T	P	C
0	0	2	1

Module I:

Introduction of MongoDB , No SQL Database , Advantage over RDBMS , MongoDB Data Types, Install MongoDB, MongoDB Data Modeling

Module II :

Operators: Query & Projection Operator, MongoDB Update Operator, Aggregation Pipeline Stages , MongoDB limit(), MongoDB sort() , Query Modifiers

Commands: Aggregation Commands, Geospatial Command , Query and Write Operation Commands, Query Plan Cache Commands, Authentication Commands , User Management Commands, Role Management Commands , Replication Command , Sharding Commands , Session Commands

Module III:

Create Database, Drop Database , Create Collection, Drop Collection

Module IV:

Inset Documents , Update Documents, Delete Documents, Query Documents , SQL to MongoDB Mapping , MongoDB text search, Partial Updates & Document Limits, Removing Documents , Multi Update , Upsert, Wire Protocol , Bulk() Operations and Methods , Common Commands, db.runCommand() , db.isMaster() , db.serverStatus() , db.currentOp() & db.killOp() , collection.stats() & collection.drop()

Module V:

MongoDB Shell , Shell Collection Methods, Cursor Method , MongoDB Database Commands, Query Plan Cache Methods , User Management Method , Role Management Method , MongoDB Replication Methods

Connectivity: Java MongoDB , PHP MongoDB, Python MongoDB

Text Book:

- i) MongoDB Complete Guide by Manu Sharma BPB Publications

III-I

2450513: COMPUTER NETWORKS

L T P C
3 1 0 4

Prerequisites: Data Structures

Course Objectives:

- To introduce the basic concepts of data communications, transmission media, switching techniques, and network reference models (OSI & TCP/IP).
- To develop an understanding of data link layer functions such as framing, error detection and correction, flow/error control, and medium access protocols used in wired and wireless networks.
- To explain the principles of network layer operations, including logical addressing, routing algorithms, address mapping, and congestion control mechanisms.
- To impart knowledge of transport layer services and protocols with emphasis on reliable communication, TCP/UDP mechanisms, congestion handling, and quality of service (QoS).
- To familiarize students with application layer protocols and enabling effective communication over the Internet.

Course Outcomes: After completion of the course, students should be able to

- Explain the fundamentals of data communication, network structures, transmission media, switching techniques, and reference models (OSI & TCP/IP).
- Apply error detection/correction techniques and medium access control protocols for ensuring reliable and efficient data link layer communication.
- Analyze logical addressing, routing algorithms, and congestion control techniques for effective network layer operations.
- Evaluate transport layer protocols (TCP/UDP) and mechanisms for process-to-process delivery, congestion control, and Quality of Service (QoS).
- Demonstrate the use of application layer protocols such as DNS, SMTP, FTP, HTTP, and SNMP in real-world networking scenarios.

MODULE – I

[10]

Network hardware, Network software, OSI, TCP/IP Reference models, Example Networks: ARPANET, Internet.

Physical Layer: Guided Transmission media: twisted pairs, coaxial cable, fiber optics, Wireless Transmission.

Data link layer: Design issues, framing, Error detection and correction.

Module – II [10]

Elementary data link protocols: simplex protocol, A simplex stop and wait protocol for an error-free channel, A simplex stop and wait protocol for noisy channel.

Sliding Window protocols: A one-bit sliding window protocol, A protocol using Go-Back-N, A protocol using Selective Repeat, Example data link protocols.

Medium Access sublayer: The channel allocation problem, Multiple access protocols: ALOHA, Carrier sense multiple access protocols, collision free protocols. Wireless LANs, Data link layer switching.

Module – III [10]

Network Layer: Design issues, Routing algorithms: shortest path routing, Flooding, Hierarchical routing, Broadcast, Multicast, distance vector routing, Congestion Control Algorithms, Quality of Service, Internetworking, The Network layer in the internet.

Module – IV [8]

Transport Layer: Transport Services, Elements of Transport protocols, Connection management, TCP and UDP protocols. Multiplexing and Demultiplexing.

Module – V [10]

Application Layer: Principles of Network Applications, Network Application Architectures, Processes Communicating, Transport Services Available to Applications, Transport Services Provided by the Internet, Application-Layer Protocols, The Web and HTTP, File Transfer: FTP, Electronic Mail in the Internet, SMTP, DNS, Peer-to-Peer Applications, Socket Programming: Creating Network Applications.

TEXT BOOK:

1. Computer Networks -- Andrew S Tanenbaum, David. j. Wetherall, 5th Edition. Pearson Education/PHI
2. Computer Networking: A Top-Down Approach - James F.Kurose, Keith W. Ross, Pearson

REFERENCE BOOKS:

1. An Engineering Approach to Computer Networks-S. Keshav, 2nd Edition, Pearson Education
2. Data Communications and Networking – Behrouz A. Forouzan. Third Edition TMH.

24X0529: DATA SCIENCE

L T P C
3 0 0 3

Course Objectives:

- To Learn concepts, techniques and tools they need to deal with various facets of data science practice, including data collection and integration
- Understand the basic types of data and basic statistics
- Identify the importance of data reduction and data visualization techniques
- Introduce the fundamental concepts of Data Science, including big data, datafication, and statistical inference.
- Develop practical skills in R programming for handling vectors, matrices, factors, data frames, and lists.

Course Outcomes: After completion of the course, student should be able to

- Understand basic terms of statistical modeling and data science
- Implement of R programming concepts
- Utilize R elements for data visualization and prediction
- Differentiate between various data types and attributes, and summarize data using statistical measures and graphical representations.
- Construct data visualizations (charts, plots, histograms, scatterplots) and perform regression analysis (linear and multiple regression) for interpreting and modelling of data.

MODULE – I

[10]

Definition of Data Science- Big Data and Data Science hype – and getting past the hype - Datafication- Current landscape of perspectives - Statistical Inference - Populations and samples – Statistical modeling, probability distributions, fitting a model – Over fitting. Basics of R: Introduction, R-Environment Setup, Programming with R, Basic Data Types.

MODULE – II

[10]

Data Types & Statistical Description: Types of Data: Attributes and Measurement, Attribute, The Type of an Attribute, The Different Types of Attributes, Describing Attributes by the Number of Values, Asymmetric Attributes, Binary Attribute, Nominal Attributes, Ordinal Attributes,

Numeric Attributes, Discrete versus Continuous Attributes. Basic Statistical Descriptions of Data: Measuring the Central Tendency: Mean, Median, and Mode, Measuring the Dispersion of Data: Range, Quartiles, Variance, Standard Deviation, and Interquartile Range, Graphic Displays of Basic Statistical Descriptions of Data.

MODULE – III [10]

Vectors: Creating and Naming Vectors, Vector Arithmetic, Vector sub setting, Matrices: Creating and Naming Matrices, Matrix Sub setting, Arrays, Class. Factors and Data Frames: Introduction to Factors: Factor Levels, Summarizing a Factor, Ordered Factors, Comparing Ordered Factors, Introduction to Data Frame, subsetting of Data Frames, Extending Data Frames, Sorting Data Frames. Lists: Introduction, creating a List: Creating a Named List, Accessing List Elements, Manipulating List Elements, Merging Lists, Converting Lists to Vectors

MODULE – IV [10]

Conditionals and Control Flow: Relational Operators, Relational Operators and Vectors, Logical Operators, Logical Operators and Vectors, Conditional Statements. Iterative Programming in R: Introduction, While Loop, For Loop, Looping Over List. Functions in R: Introduction, writing a Function in R, Nested Functions, Function Scoping, Recursion, Loading an R Package, Mathematical Functions in R.

MODULE – V [8]

Charts and Graphs: Introduction, Pie Chart: Chart Legend, Bar Chart, custom charts, cyclical data and circular area charts, Dual Axis charts, Box Plot, Histogram, Line Graph: Multiple Lines in Line Graph, Scatter Plot.

Regression: Linear Regression Analysis, Multiple Linear regression

TEXT BOOKS:

1. Doing Data Science, Straight Talk from The Frontline. Cathy O’Neil and Rachel Schutt, O’Reilly,2014.
2. K G Srinivas, G M Siddesh, “Statistical programming in R”, Oxford Publications.

2450515: MACHINE LEARNING

L T P C
3 0 0 3

Prerequisite: Mathematical Statistical Foundation, Data Structures

Course Objectives:

- To introduce the fundamental concepts, types, and issues of machine learning, along with the theoretical foundations of supervised and unsupervised learning.
- To develop the ability to design and implement learning systems using models such as perceptrons, multilayer neural networks, decision trees, and support vector machines.
- To explore advanced machine learning techniques including ensemble methods, radial basis functions, and dimensionality reduction approaches.
- To provide insights into evolutionary and probabilistic learning models such as genetic algorithms, Bayesian networks, and hidden Markov models.
- To enable students to apply reinforcement learning and modern optimization strategies for solving real-world machine learning problems effectively.

Course Outcomes: After completion of the course, student should be able to

- Distinguish between, supervised, unsupervised and semi-supervised learning
- Describe the relationship between the brain, neuron models, and learning systems, highlighting their computational perspectives.
- Formulate concept learning tasks and apply hypothesis search techniques such as maximally specific hypothesis and version spaces.
- Implement linear models including linear discriminants, perceptron learning, and linear regression for classification and prediction.
- Evaluate issues and perspectives in machine learning system design by considering challenges such as linear separability and algorithm limitations.

Module – I

[10]

Learning: Types of Machine Learning, Supervised Learning, The Brain and the Neuron, design a Learning System – Perspectives and Issues in Machine Learning, Concept Learning Task, Concept Learning as Search – Finding a Maximally Specific Hypothesis, Version Spaces and the Candidate Elimination Algorithm, Linear Discriminants, Perceptron, Linear Separability, Linear Regression, Logistic Regression.

Module – II [10]
Multi-layer Perceptron, Going Forwards, Going Backwards: Back Propagation Error, Multi-layer Perceptron in Practice Examples of using the MLP, Overview, Deriving Back-Propagation, Radial Basis Functions and Splines, Concepts, RBF Network, Curse of Dimensionality, Interpolations and Basis Functions, Support Vector Machines

Module – III [8]
Learning with Trees, Decision Trees, Constructing Decision Trees, Classification and Regression Trees, Ensemble Learning, Boosting, Bagging, Different ways to Combine Classifiers, Basic Statistics, Gaussian Mixture Models, Nearest Neighbor Methods, Unsupervised Learning, K means Algorithms
Evaluation Metrics in Machine Learning: Confusion Matrix, Accuracy, Precision, Recall, F1 score

Module – IV [10]
Dimensionality Reduction: Linear Discriminant Analysis, Principal Component Analysis, Factor Analysis, Independent Component Analysis, Locally Linear Embedding, Least Squares Optimization
Evolutionary Learning: Genetic algorithms – Genetic Offspring: - Genetic Operators – Using Genetic Algorithms

Module – V [10]
Reinforcement Learning: Overview – Getting Lost Example, Markov Chain Monte Carlo Methods, Sampling, Proposal Distribution, Markov Chain Monte Carlo, Graphical Models, Bayesian Networks, Markov Random Fields, Hidden Markov Models, Tracking Methods

2450534: MOBILE COMPUTING

(Professional Elective)

B.Tech. III Year I Sem

L T P C
3 0 0 3

Course Overview

This course introduces the fundamentals of Mobile Computing, covering mobile communications, wireless networks, transport protocols, database issues, data dissemination, and Mobile Ad hoc Networks (MANETs). Students learn about GSM, mobile IP, MAC protocols, transport layer adaptations, data synchronization, and routing algorithms in MANETs. The course prepares students to design and implement mobile computing solutions considering mobility, limited resources, and quality of service.

Prerequisites: Computer Networks

Course Objectives:

- To understand the fundamentals of mobile computing, its architecture, limitations, and GSM-based mobile communication technologies.
- To analyze medium access control mechanisms and network layer protocols for mobility management and seamless data delivery.
- To study transport layer adaptations for mobile networks and explore database management challenges such as caching, transactions, and recovery.
- To examine mechanisms for efficient data dissemination and synchronization in mobile environments.
- To understand the concepts, challenges, and routing strategies in mobile ad hoc networks.

Course Outcomes: After completion of the course, students should be able to

- Understand Multiplexing and MAC Protocols
- Learn basics of mobile telecommunication systems.
- Apply functionality of MAC, network layer and identify a routing protocol for a given Ad hoc network.
- Analyze the functionality of Transport and Application layers.
- Develop a mobile application using android/blackberry/ios/Windows SDK

UNIT-I Introduction

[10 Periods]

Mobile Communications, Mobile Computing – Paradigm, Promises/Novel Applications and Impediments and Architecture; Mobile and Handheld Devices, Limitations of Mobile and Handheld Devices.

GSM – Services, System Architecture, Radio Interfaces, Protocols, Localization, Calling, Handover, Security, New Data Services, GPRS, CSHSD, DECT.

UNIT-II (Wireless)

[10 Periods]

Medium Access Control (MAC)

Motivation for a specialized MAC (Hidden and exposed terminals, Near and far terminals), SDMA, FDMA, TDMA, CDMA, Wireless LAN/(IEEE 802.11)

Mobile Network Layer

IP and Mobile IP Network Layers, Packet Delivery and Handover Management, Location Management, Registration, Tunneling and Encapsulation, Route Optimization, DHCP.

UNIT-III

[09 Periods]

Mobile Transport Layer

Conventional TCP/IP Protocols, Indirect TCP, Snooping TCP, Mobile TCP, Other Transport Layer Protocols for Mobile Networks.

Database Issues

Database Hoarding & Caching Techniques, Client-Server Computing & Adaptation, Transactional Models, Query processing, Data Recovery Process & QoS Issues.

UNIT-IV

[09 Periods]

Data Dissemination and Synchronization

Communications Asymmetry, Classification of Data Delivery Mechanisms, Data Dissemination, Broadcast Models, Selective Tuning and Indexing Methods, Data Synchronization – Introduction, Software, and Protocols

UNIT-V

[10 Periods]

Mobile Ad hoc Networks (MANETs)

Introduction, Applications & Challenges of a MANET, Routing, Classification of Routing Algorithms, Algorithms such as DSR, AODV, DSDV, Mobile Agents, Service Discovery.

TEXT BOOKS:

1. Jochen Schiller, "Mobile Communications", Addison-Wesley, Second Edition, 2009.
2. Raj Kamal, "Mobile Computing", Oxford University Press, 2007, ISBN: 0195686772

2456702: CYBER LAWS
(Professional Elective)

B.Tech. III Year I Sem

L T P C
3 0 0 3

Course Overview

The Cyber Laws course introduces students to legal, ethical, and regulatory aspects of cyberspace. It covers cybercrime, cyber offenses, Indian IT Act 2000, digital signatures, cyber ethics, and case studies of real-world cyber incidents. Students learn to identify cyber threats, understand legal frameworks, and apply ethical principles in managing cyber risks in professional and societal contexts.

Prerequisites: Computer Networks

Course Objectives:

- To understand the fundamentals of cybercrime, its classifications, the role of cyber criminals, and the legal perspectives with reference to ITA 2000 and global laws.
- To analyze various categories of cyber offenses, attack strategies, and techniques such as social engineering, botnets, and other emerging threats.
- To examine the provisions of the Indian IT Act, its amendments, and challenges in addressing cybercrime, along with associated legal implications and punishments.
- To explore the principles of cyber ethics, their application in society, and their role in shaping laws, regulations, and responsible digital behavior.
- To evaluate real-life cybercrime cases and analyze their impact on individuals, organizations, and society, with emphasis on lessons learned.

Course Outcomes: After completion of the course, students should be able

- Know Cybercrimes, Legal perspectives
- Do social engineering, Cyber talking and Cybercafé classification
- Outline about Indian IT act and Amendments
- Understand the importance of professional practice, Law and Ethics in their personal lives and professional careers.
- Learn the rights and responsibilities as an employee, team member and a global citizen

UNIT – I

[09 Periods]

Introduction to Cybercrime: Introduction, cybercrime and information security, who are cyber criminals? Classification of cybercrimes, legal perspectives, cybercrime and the Indian ITA 2000, a global perspective on cybercrimes.

UNIT – II

[10 Periods]

Cyber offenses: Categories of cybercrime, how criminals plan the attacks, social engineering: classification of social engineering, cyber talking, cyber cafe and cybercrime, Botnets- the fuel for cybercrime.

UNIT-III

[10 Periods]

Cybercrime and Cyber Security: The Legal Perspective: Introduction, The Indian IT Act, challenges to Indian Law and cybercrime scenario in India, Digital signature and the Indian IT act, Amendments to the Indian IT Act, cybercrime and punishment, Cyber law, Technology and student – Indian Scenario.

UNIT-IV

[09 Periods]

Cyber Ethics: Introduction, Cyber Society, dimensions of cyber ethics, cyber ethics by Norms, Laws and regulations, importance of cyber law, signification of cyber ethics.

Ethics in the information society: principles, Participation, people, profession, privacy, piracy, production, power, policy.

UNIT _ V

[10 Periods]

Cybercrimes: Illustrations, examples and case studies: Introduction, Real-life Examples- official website of hacked; emails spoofing Instance, Parliament Attacks, banks lose millions of rupees.

Case Studies- Internet time stealing, Indian cyber defamation, online gambling, Intellectual property crime, counterfeit computer hardware, Online Scams – Fake job offer Scams, Lottery scams.

TEXT BOOKS:

1. Cyber Security, Understanding Cyber crimes, computer forensics and legal Perspectives– Nina Godbole, Sunit Belapure, Wiley India. (Chapter 1,2,3,11)
2. Cyber Ethics 4.0, Christoph Stuckelberger, Pavan Duggal, by Globethic.

**2450539 - DESIGN PATTERNS
(PROFESSIONAL ELECTIVE)**

B.Tech. III Year I Sem

**L T P C
3 0 0 3**

Course Overview

The Design Patterns course introduces students to proven software design solutions that improve code reusability, flexibility, and maintainability. Students learn to identify recurring design problems and apply appropriate patterns using real-world examples. The course covers creational, structural, and behavioral patterns, and emphasizes the Model-View-Controller (MVC) architecture, design problem analysis, and pattern selection techniques for software engineering.

Prerequisites

1. A Course on Software Engineering”
2. A Course on “Object Oriented Programming Through Java”

Course Objectives:

- The aim of the course is to appreciate the idea behind Design Patterns in handling common problems faced during building an application
- This course covers all pattern types from creational to structural, behavioral to concurrency and highlights the scenarios when one pattern must be chosen over others.
- To learn behavioral patterns for better organization and communication between the objects
- To learn structural design patterns for better class and object composition
- To learn organizing the class responsibilities of current code

Course Outcomes: After completion of the course, students should be able to

- Create software designs that are scalable and easily maintainable
- Understand the best use of Object Oriented concepts for creating truly OOP programs
- Use creational design patterns in software design for class instantiation
- Analyze the methods for proper code packaging
- Evaluate the class responsibilities of current code

UNIT-I

[09 Periods]

Introduction: What is a design pattern? Design patterns in Smalltalk MVC, Describing Design Patterns, The Catalog of Design Patterns, Organizing the Catalog, How Design Patterns Solve Design Problems, How to Select a Design Pattern, How to Use a Design Pattern.

UNIT-II

[10 Periods]

Designing a Document Editor: Design Problems, Document Structure, Formatting, Embellishing the User Interface, Supporting Multiple Look-and-Feel Standards, Supporting Multiple Window Systems, User Operations Spelling Checking and Hyphenation, Summary

UNIT-III**[10 Periods]**

Creational Patterns: Abstract Factory, Builder, Factory Method, Prototype, Singleton, Discussion of Creational Patterns.

UNIT-IV**[09 Periods]**

Structural Pattern: Adapter, Bridge, Composite, Decorator, Façade, Flyweight, Proxy

UNIT-V**[10 Periods]**

Behavioral Patterns: Chain of Responsibility Command, Interpreter, Iterator, Mediator, Memento, Observer, State, Strategy, Template Method, Visitor.

TEXTBOOK:

1. Design Patterns, Erich Gamma, Pearson Education

REFERENCEBOOKS:

1. Pattern's in Java, Vol-I, Mark Grand, Wiley Dream Tech.
2. Patterns in Java, Vol-II, Mark Grand, Wiley Dream Tech.
3. Java Enterprise Design Patterns Vol-III, Mark Grand, Wiley Dream Tech.
4. Head First Design Patterns, Eric Freeman, O'reily publications

24X0523: INTERNET OF THINGS

L T P C
3 0 0 3

Pre-Requisites: Computer organization, Computer Networks

Course Objectives:

- To introduce the fundamental concepts, architecture, and enabling technologies of the Internet of Things (IoT).
- To familiarize students with domain-specific IoT applications in areas like home automation, healthcare, agriculture, and environment.
- To explain communication protocols, system management tools, and standards essential for IoT and M2M (Machine-to-Machine) interactions.
- To develop students' ability to design and implement IoT systems using Python and physical devices such as Raspberry Pi.
- To expose students to real-world IoT case studies and cloud-based IoT platforms for data storage, visualization, and remote access.

Course Outcomes: After completion of the course, students should be able to

- Explain physical and logical design of IoT systems, and identify suitable enabling technologies.
- Differentiate between IoT and M2M communication.
- Develop IoT system components using Python, including handling data types, files, modules, and relevant packages.
- Interface IoT devices like Raspberry Pi and integrate them with cloud services for IoT-based applications.
- Analyze IoT solutions across various domains such as smart homes, environment monitoring, and agriculture.

MODULE – I

[10]

Introduction to Internet of Things –Definition and Characteristics of IoT, Physical Design of IoT, Logical Design of IoT, IoT Enabling Technologies, IoT Levels and Deployment Templates Domain Specific IoTs – Home automation, Environment, Agriculture, Health and Lifestyle

MODULE – II

[10]

IoT and M2M – M2M, Difference between IoT and M2M, SDN and NFV for IoT, IoT System Management with NETCOZF, YANG- Need for IoT system

Management, Simple Network management protocol, Network operator requirements, NETCONF, YANG, IoT Systems Management with NETCONF-YANG

MODULE – III [10]

IoT Systems – Logical design using Python-Introduction to Python – Python Data types & Data structures, Control flow, Functions, Modules, Packaging, File handling, Data/Time operations, Classes, Exception, Python packages of Interest for IoT

MODULE – IV [10]

IoT Physical Devices and Endpoints - Raspberry Pi, Linux on Raspberry Pi, Raspberry Pi Interfaces, Programming Raspberry PI with Python, Other IoT devices.

IoT Physical Servers and Cloud Offerings – Introduction to Cloud Storage models and communication APIs, WAMP-AutoBahn for IoT, Xively Cloud for IoT, Python web application framework –Django, Designing a RESTful web API

MODULE – V [8]

Case studies- Home Automation, Environment-weather monitoring-weather reporting- air pollution monitoring, Agriculture.

TEXT BOOK:

1. Internet of Things - A Hands-on Approach, Arshdeep Bahga and Vijay Madisetti, Universities Press, 2015, ISBN: 9788173719547.

REFERENCE BOOK:

1. Getting Started with Raspberry Pi, Matt Richardson & Shawn Wallace, O'Reilly (SPD), 2014, ISBN: 9789350239759.

2450583: MACHINE LEARNING LABORATORY

L	T	P	C
0	0	2	1

Prerequisites: Essentials of Problem solving using python Laboratory

Course Objectives:

- To impart knowledge of statistical concepts and their implementation in Python for data analysis.
- To familiarize students with Python libraries such as Statistics, Math, NumPy, SciPy, Pandas, and Matplotlib for data processing and visualization.
- To develop skills in applying supervised learning techniques like Linear Regression, Logistic Regression, Decision Trees, and KNN using sklearn.
- To introduce unsupervised learning techniques such as K-Means Clustering and their applications.
- To enable students to analyze, evaluate, and compare the performance of different machine learning algorithms through mini projects.

Course Outcomes: After completion of the course, students should be able to

- Implement statistical measures and apply Python libraries for data analysis.
- Utilize data processing and visualization tools such as Pandas and Matplotlib effectively.
- Apply supervised machine learning algorithms including Regression, Decision Trees, and KNN using sklearn.
- Demonstrate the use of unsupervised learning techniques such as K-Means clustering.
- Analyze the performance of machine learning models on real-world datasets through mini projects.

List of Experiments

1. Write a python program to compute Central Tendency Measures: Mean, Median, Mode Measure of Dispersion: Variance, Standard Deviation
2. Study of Python Basic Libraries such as Statistics, Math, Numpy and Scipy

3. Study of Python Libraries for ML application such as Pandas and Matplotlib
4. Write a Python program to implement Simple Linear Regression
5. Implementation of Multiple Linear Regression for House Price Prediction using sklearn
6. Implementation of Decision tree using sklearn and its parameter tuning
7. Implementation of KNN using sklearn
8. Implementation of Logistic Regression using sklearn
9. Implementation of K-Means Clustering
10. Performance analysis of Classification Algorithms on a specific dataset.
11. Implement decision tree algorithm.
12. Implement Support Vector Machine for the sample data.
13. Write a python program to implement Hidden Markov models.
14. Implementation of Linear Discriminant Analysis.

TEXT BOOK:

1. Machine Learning – Tom M. Mitchell, - MGH.

REFERENCE BOOK:

1. Machine Learning: An Algorithmic Perspective, Stephen Marshland, Taylor & Francis.

2450579: COMPUTER NETWORKS LABORATORY

L T P C
0 0 2 1

Prerequisite: Data Structures Laboratory, Operating Systems Laboratory

Course Objectives:

- To Understand core data link and network layer concepts including framing, error detection (CRC), flow control, and routing protocols to build a strong theoretical foundation.
- To Implement practical network algorithms and protocols—such as character/bit stuffing, CRC (CRC-12/CRC-16/CRC-CCITT), sliding-window (Go-Back-N), Dijkstra’s shortest path, and distance-vector routing—through hands-on programming assignments.
- To Develop and evaluate network mechanisms for reliability and performance, including loss recovery, congestion control (leaky bucket), buffer/frame sorting techniques, and encryption/decryption for secure data transmission.
- To Use industry tools and simulators (Wireshark, Nmap, NS2) to capture/analyze traffic, perform scans and OS detection, simulate packet drops, throughput, congestion, and compare TCP/UDP behavior under varied network conditions.
- To Analyze and interpret results from experiments and simulations to produce meaningful performance metrics (packet drop, throughput, congestion plots, broadcast trees) and to propose improvements or configuration choices based on empirical evidence.

Course Outcomes: After completion of the course, students should be able to

- Implement data link layer techniques for framing, error detection, and flow control.
- Apply routing algorithms for compute paths, routing tables, and broadcast trees.
- Develop congestion control, buffer management, and loss recovery mechanisms.
- Use Wireshark, Nmap, and NS2 tools to capture, analyze, and simulate network performance.
- Analyze results for evaluate network efficiency, reliability, and security.

List of Experiments

1. Implement the data link layer framing methods such as character, character-stuffing and bit stuffing.
2. Write a program to compute CRC code for the polynomials CRC-12, CRC-16 and CRC CCIP

3. Develop a simple data link layer that performs the flow control using the sliding window protocol, and loss recovery using the Go-Back-N mechanism.
4. Implement Dijkstra's algorithm to compute the shortest path through a network
5. Take an example subnet of hosts and obtain a broadcast tree for the subnet.
6. Implement distance vector routing algorithm for obtaining routing tables at each node.
7. Implement data encryption and data decryption
8. Write a program for congestion control using Leaky bucket algorithm.
9. Write a program for frame sorting techniques used in buffers.
10. Implement the following using Wireshark
 - i. Packet Capture Using Wire shark
 - ii. Starting Wire shark
 - iii. Viewing Captured Traffic
 - iv. Analysis and Statistics & Filters.
11. How to run Nmap scan Operating System Detection using Nmap

Do the following using NS2 Simulator

- 12 . Simulate to Find the Number of Packets Dropped
13. Simulate to Find the Number of Packets Dropped by TCP/UDP
14. Simulate to Find the Number of Packets Dropped due to Congestion
15. Simulate to Compare Data Rate & Throughput.
16. Simulate to Plot Congestion for Different Source/Destination
17. Simulate to Determine the Performance with respect to Transmission of Packets

TEXT BOOK:

1. Computer Networks, Andrew S Tanenbaum, David. j. Wetherall, 5th Edition. Pearson Education/PHI.

REFERENCE BOOKS:

1. An Engineering Approach to Computer Networks, S. Keshav, 2nd Edition, Pearson Education.
2. Data Communications and Networking – Behrouz A. Forouzan. 3rd Edition, TMH.

2456770: DATA SCIENCE LAB

B.Tech. III Year I Sem.

L T P C

0 0 2 1

Course Overview

The Data Science Lab course provides hands-on experience in using R programming for data science applications. Students learn to install and configure R, manipulate fundamental data structures, perform exploratory data analysis (EDA), visualize data using various graphical techniques, and implement basic statistical modeling, including linear and multiple regression. This lab enhances practical skills for analyzing real-world datasets and interpreting results using R.

Prerequisites: Programming for Problem solving Lab

Course Objective:

- To familiarize students with the R programming environment and its fundamental concepts for data science applications.
- To develop skills in handling different data structures in R (vectors, matrices, arrays, lists, data frames) and perform operations on them.
- To apply R commands for data visualization using charts, histograms, scatter plots, and line graphs for meaningful interpretation of datasets.
- To perform data acquisition, cleaning, and exploratory data analysis (EDA) on structured datasets using R.
- To implement basic statistical modeling techniques such as linear and multiple linear regression using R for predictive analysis.

Course Outcomes: After completion of the course, students should be able to

- Work with data science using R Programming environment.
- Implement various statistical concepts like linear and logistic regression.
- Use R-Programming for visualizations
- Perform correlation and covariance
- Evaluate Classification and Clustering over a given data set.

List of Experiments

1. Download and install R-Programming environment and install basic packages using `install.packages()` command in R.
2. Learn all the basics of R-Programming (Data types, Variables, Operators etc,
3. Write R command to Illustrate summation, subtraction, multiplication, and division operations on vectors using vectors.
4. Write R command to Enumerate multiplication and division operations between matrices and vectors in R console
5. Write R command to Illustrates the usage of Vector subsetting and Matrix subsetting
6. Write R command to write a program to create an array of 3×3 matrixes with 3 rows and 3 columns.
7. Write an R program to draw i) Pie chart ii) 3D Pie Chart, along with chart

- legend by considering suitable CSV file
8. Write an R program to draw Bar Chart along with chart legend by considering suitable CSV file
 9. Create a CSV file having Speed and Distance attributes with 1000 records. Write R program to draw
 - i) Box plots
 - ii) Histogram
 - iii) Line Graphto demonstrate the relation between the cars speed and the distance.
 10. Create a CSV file having Study Time and Exam Scores attributes with 1000 records. Write R program to draw
 - i) Multiple line graphs
 - ii) Scatter plotto demonstrate the relation between the Study Time and the Exam Scores.
 11. Implement different data structures in R (Vectors, Lists, Data Frames)
 12. Write an R program to read a csv file and analyze the data in the file using EDA (Explorative Data Analysis) techniques.
 13. Write an R program to illustrate Linear Regression considering suitable CSV file
 14. Write an R program to illustrate Multi linear Regression considering suitable CSV file

2450022: GENDER SENSITIZATION
(An Activity-based Course)

B.Tech. II Year I Sem.

L T P C
3 0 0 0

COURSE DESCRIPTION

This course offers an introduction to Gender Studies, an interdisciplinary field that asks critical questions about the meanings of sex and gender in society. The primary goal of this course is to familiarize students with key issues, questions and debates in Gender Studies, both historical and contemporary. It draws on multiple disciplines – such as literature, history, economics, psychology, sociology, philosophy, political science, anthropology and media studies – to examine cultural assumptions about sex, gender, and sexuality.

This course integrates analysis of current events through student presentations, aiming to increase awareness of contemporary and historical experiences of women, and of the multiple ways that sex and gender interact with race, class, caste, nationality and other social identities. This course also seeks to build an understanding and initiate and strengthen programmes combating gender-based violence and discrimination. The course also features several exercises and reflective activities designed to examine the concepts of gender, gender-based violence, sexuality, and rights. It will further explore the impact of gender-based violence on education, health and development.

Objectives of the Course:

- To develop students' sensibility with regard to issues of gender in contemporary India.
- To provide a critical perspective on the socialization of men and women.
- To introduce students to information about some key biological aspects of genders.
- To expose the students to debates on the politics and economics of work.
- To help students reflect critically on gender violence.
- To expose students to more egalitarian interactions between men and women.

Learning Outcomes:

- Students will have developed a better understanding of important issues related to gender in contemporary India.
- Students will be sensitized to basic dimensions of the biological, sociological, psychological and legal aspects of gender. This will be achieved through discussion of materials derived from research, facts, everyday life, literature and film.
- Students will attain a finer grasp of how gender discrimination works in our society and how to counter it.
- Students will acquire insight into the gendered division of labour and its relation to politics and economics.
- Men and women students and professionals will be better equipped to work and live together as equals.
- Students will develop a sense of appreciation of women in all walks of life.
- Through providing accounts of studies and movements as well as the new laws that provide protection and relief to women, the textbook will empower students to understand and respond to gender violence.

UNIT - I: UNDERSTANDING GENDER

Introduction: Definition of Gender-Basic Gender Concepts and Terminology-Exploring Attitudes towards Gender-Construction of Gender-Socialization: Making Women, Making Men - Preparing for Womanhood. Growing up Male. First lessons in Caste.

UNIT – II: GENDER ROLES AND RELATIONS

Two or Many? -Struggles with Discrimination-Gender Roles and Relations-Types of Gender Roles-Gender Roles and Relationships Matrix-Missing Women-Sex Selection and Its Consequences-Declining Sex Ratio. Demographic Consequences-Gender Spectrum: Beyond the Binary

UNIT – III: GENDER AND LABOUR

Division and Valuation of Labour-Housework: The Invisible Labor- “My Mother doesn’t Work.” “Share the Load.”-Work: Its Politics and Economics -Fact and Fiction. Unrecognized and Unaccounted work. - Gender Development Issues-Gender, Governance and Sustainable Development-Gender and Human Rights-Gender and Mainstreaming

UNIT – IV: GENDER - BASED VIOLENCE

The Concept of Violence- Types of Gender-based Violence-Gender-based Violence from a Human Rights Perspective-Sexual Harassment: Say No! -Sexual Harassment, not Eve-teasing- Coping with Everyday Harassment- Further Reading: “*Chupulu*”.

Domestic Violence: Speaking Out Is Home a Safe Place? -When Women Unite [Film]. Rebuilding Lives. Thinking about Sexual Violence Blaming the Victim-“I Fought for my Life”

UNIT – V: GENDER AND CULTURE

Gender and Film-Gender and Electronic Media-Gender and Advertisement-Gender and Popular Literature- Gender Development Issues-Gender Issues-Gender Sensitive Language-Gender and Popular Literature - Just Relationships: Being Together as Equals Mary Kom and Onler. Love and Acid just do not Mix. Love Letters. Mothers and Fathers. Rosa Parks- The Brave Heart.

Note: Since it is Interdisciplinary Course, Resource Persons can be drawn from the fields of English Literature or Sociology or Political Science or any other qualified faculty who has expertise in this field from engineering departments.

- *Classes will consist of a combination of activities: dialogue-based lectures, discussions, collaborative learning activities, group work and in-class assignments. Apart from the above prescribed book, Teachers can make use of any authentic materials related to the topics given in the syllabus on “Gender”.*

ESSENTIAL READING: The Textbook, “Towards a World of Equals: A Bilingual Textbook on Gender” written by A.Suneetha, Uma Bhargubanda, Duggirala Vasanta, Rama Melkote, Vasudha Nagaraj, Asma Rasheed, Gogu Shyamala, Deepa Sreenivas and Susie Tharu published by Telugu Akademi, Telangana Government in 2015.

ASSESSMENT AND GRADING:

- Discussion & Classroom Participation: 20%
- Project/Assignment: 30%
- End Term Exam: 50%

III-11

24X0512: ARTIFICIAL INTELLIGENCE

L T P C
3 0 0 3

Course Overview:

This course aims to introduce the fundamental concepts of artificial intelligence (AI). Students will develop a broad understanding of AI technologies, their implications, and their potential applications in various fields. The course will emphasize practical examples and real-world case studies to facilitate comprehension and inspire innovative thinking.

Prerequisites:

- Data Structures, Discrete Mathematics

Course Objectives:

 The students will try to learn

- The fundamental concepts and subfields of AI.
- Real-world applications of AI across various industries.
- The knowledge base and application of reasoning
- First-order logic to solve real world problems..
- Recognize the potential of AI to drive innovation and transformation in different domains.

Course Outcomes:

 After successful completion of the course, students should be able to

- Frame an efficient problem space for a problem expressed in natural language.
- Finalize a search algorithm for a problem and estimate its time and space complexities.
- Know the knowledge base and application of reasoning
- Apply first-order logic to solve real world problems.
- Possess the skill for representing knowledge using the appropriate technique for a given problem.

Module-I

[9]

Artificial Intelligence: What is AI, Foundations and History of AI. Propositional and first order logic.

Intelligent Agents: Introduction, how Agents Should Act, Structure of Intelligent Agents, Agent programs, Simple reflex agents, Goal based agents, Utility based agents, Environments and Environment programs.

Problem Solving by Search: Problem-Solving Agents, Formulating Problems, Example Problems, Searching for Solutions, Search Strategies (Breadth-first search, Uniform cost search, Depth-First Search, Iterative deepening Depth-First search, Bidirectional search).

Module –II

[8]

Informed Search Methods: Best-First Search, Heuristic Functions, Memory Bounded Search, Iterative Improvement Algorithms.

Game Playing: Introduction, Games as Search Problems, Perfect Decisions in Two-Person Games, Imperfect Decisions, Alpha-Beta Pruning, Games That

Include an Element of Chance, State-of-the- Art Game Programs.

Module –III **[9]**

Knowledge and Reasoning: A Knowledge-Based Agent, The Wumpus World Environment, Representation, Reasoning, and Logic, Propositional Logic, An Agent for the Wumpus World.

First-Order Logic: Syntax and Semantics, Extensions and Notational Variations, Using First-Order Logic, Logical Agents for the Wumpus World, A Simple Reflex Agent, Representing Change in the World Building a Knowledge Base: Properties of Good and Bad Knowledge Bases, Knowledge Engineering, The Electronic Circuits Domain, General Ontology, Application: The Grocery Shopping World.

Module –IV **[10]**

Inference in First-Order Logic: Inference Rules Involving Quantifiers, An Example Proof, Generalized Modus Ponens, Forward and Backward Chaining, Resolution: A Complete Inference Procedure, Completeness of resolution.

Logical Reasoning Systems: Introduction, Indexing, Retrieval, and Unification, Logic Programming Systems, Theorem Provers, Forward-Chaining Production Systems, Frame Systems and Semantic Networks, Description Logics, Managing Retractions, Assumptions, and Explanations

Module –V **[9]**

Planning: A Simple Planning Agent, From Problem Solving to Planning, Planning in Situation Calculus, Basic Representations for Planning, A Partial-Order Planning Example, A Partial-Order Planning Algorithm, Knowledge Engineering for Planning.

Practical Planning: Practical Planners, Hierarchical Decomposition, Analysis of Hierarchical Decomposition, Resource Constraints.

4. Artificial Intelligence and Expert systems – Patterson, Pearson Education

2460516: CRYPTOGRAPHY AND NETWORK SECURITY

B.Tech. III Year II Sem.

L T P C
3 1 0 4

Prerequisites: Computer Networks

Course Out comes: The students will be able to:

- Understand basic cryptographic techniques and models of internetwork security.
- Apply symmetric and asymmetric cryptographic techniques to secure data and understand their algorithmic principles.
- Analyze the role of cryptographic hash functions and authentication mechanisms in ensuring data integrity and security in key distribution systems.
- Implement email and IP layer security protocols and analyze their effectiveness in protecting communication.
- Apply system security concepts to configure web security protocols, identify threats, and design security infrastructure like firewalls and IDS.

UNIT-I

Security Attacks (Interruption, Interception, Modification and Fabrication), Security Services (Confidentiality, Authentication, Integrity, Non-repudiation, access Control and Availability) and Mechanisms, A model for Internet work security, Cryptography Concepts and Techniques: Introduction, plain text and cipher text, substitution techniques, transposition techniques, encryption and decryption, symmetric and asymmetric key cryptography, steganography, key range and key size.

UNIT-II

Symmetric key Ciphers: Block Cipher principles, DES, AES, Blowfish, RC4, Block cipher operation, Stream ciphers, Asymmetric key Ciphers: Principles of public key cryptosystems, RSA algorithm, Elgamal Cryptography, Diffie – Hellman Key Exchange, Knapsack Algorithm.

UNIT-III

Cryptographic Hash Functions: Message Authentication, Secure Hash Algorithm (SHA512), Message authentication codes: Authentication requirements, HMAC, CMAC, Digital signatures, Elgamal Digital Signature Scheme. Key Management and Distribution: Symmetric Key Distribution Using Symmetric & Asymmetric Encryption, Distribution of Public Keys, Kerberos, X. 509 Authentication Service, Public–Key Infrastructure

UNIT-IV

E mail privacy: Pretty Good Privacy (PGP) and S/MIME. IP Security: Over view, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Association and Key Management.

UNIT-V

Web Security: Requirements, Secure Socket Layer (SSL) and Transport Layer Security (TLS), Secure Electronic Transaction (SET). Intruders, Viruses and related threats, Firewall Design principles, Trusted Systems, Intrusion Detection Systems.

TEXTBOOKS:

1. Cryptography and Network Security by Atul Kahathe MC Graw Hill, 2nd edition.
2. Cryptography and Network Security by Will I am Stallings 6th Edition, Pearson Education.

REFERENCES:

1. Cryptography and Network Security by Behrouz A.Forouzan.
2. Applied Cryptography by Bruce Schneier.

2460517: COMPILER DESIGN

L	T	P	C
3	1	0	4

Prerequisites: Formal Languages and Automata Theory

Course Objectives:

- To understand the structure, phases, and role of a compiler in translating programming languages.
- To learn lexical analysis techniques using regular expressions, finite automata, and lexical analyzer generators.
- To study syntax analysis methods, grammar construction, and parsing techniques for language processing.
- To explore syntax-directed translation, intermediate code generation, type checking, and run-time environments.
- To analyze and apply code generation strategies and machine-independent optimization techniques for efficient execution.

Course Outcomes: After completion of the course, students should be able to

- Implement lexical analyzers using regular expressions, finite automata, and Lex tools.
- Apply parsing techniques (top-down, bottom-up, LR) for analyzing context-free grammars.
- Construct syntax-directed translations and generate intermediate code for programming constructs.
- Design run-time environments and apply code generation strategies with optimization.
- Perform machine-independent code optimization using data-flow analysis and loop optimizations.

Module-I

[10]

Introduction: The structure of a compiler, the science of building a compiler, programming language basics Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Recognition of Tokens, The Lexical-Analyzer Generator Lex, Finite Automata, From Regular Expressions to Automata, Design of a Lexical-Analyzer Generator, Optimization of DFA-Based Pattern Matchers.

Module- II**[10]**

Syntax Analysis: Introduction, Context-Free Grammars, Writing a Grammar, Top-Down Parsing, Bottom-Up Parsing, Introduction to LR Parsing: Simple LR, More Powerful LR Parsers, Using Ambiguous Grammars and Parser Generators.

Module- III**[10]**

Syntax-Directed Translation: Syntax-Directed Definitions, Evaluation Orders for SDD's, Applications of Syntax-Directed Translation, Syntax-Directed Translation Schemes, Implementing L-Attributed SDD's. Intermediate-Code Generation: Variants of Syntax Trees, Three-Address Code, Types and Declarations, Type Checking, Control Flow, Switch-Statements, Intermediate Code for Procedures.

Module- IV**[10]**

Run-Time Environments: Stack Allocation of Space, Access to Nonlocal Data on the Stack, Heap Management, Introduction to Garbage Collection, Introduction to Trace-Based Collection. Code Generation: Issues in the Design of a Code Generator, The Target Language, Addresses in the Target Code, Basic Blocks and Flow Graphs, Optimization of Basic Blocks, A Simple Code Generator, Peephole Optimization, Register Allocation and Assignment, Dynamic Programming.

Module- V**[8]**

Machine-Independent Optimization: The Principal Sources of Optimization, Introduction to Data-Flow Analysis, Foundations of Data-Flow Analysis, Constant Propagation, Partial- Redundancy Elimination, Loops in Flow Graphs.

Text Books:

1. Compilers: Principles, Techniques and Tools, Second Edition, Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman.

2466655: INTRODUCTION TO SOFT COMPUTING

(PROFESSIONAL ELECTIVE)

B.Tech. III Year II. Sem.

L T P C
3 0 0 3

Course Overview

Soft Computing is a branch of AI that deals with approximate models and provides solutions to complex real-world problems where traditional computing fails. It includes techniques like Neural Networks, Fuzzy Logic, Genetic Algorithms, and Hybrid Systems. This course covers foundational concepts, algorithms, and applications in areas like pattern recognition, optimization, and decision-making.

Prerequisites:

Basic knowledge of Artificial Intelligence, Mathematics (Probability, Linear Algebra), and Programming (Python/MATLAB).

Course Objectives:

- Understand with soft computing concepts
- Introduce and use the idea of fuzzy logic and use of heuristics based on human experience
- Familiarize the Neuro-Fuzzy modeling using Classification and Clustering techniques
- Learn the concepts of Genetic algorithm and its applications
- Acquire the knowledge of Rough Sets.

Course Outcomes: After completion of the course, students should be able to

- Understand soft computing and its real-world uses in AI and robotics.
- Identify the difference between Conventional Artificial Intelligence to Computational Intelligence.
- Apply fuzzy logic and reasoning to handle and solve engineering problems
- Analyze the Classification techniques on various applications.
- Perform various operations of genetic algorithms and Rough Sets.

UNIT – I

[09 Periods]

Introduction to Soft Computing: Evolutionary Computing, "Soft" computing versus "Hard" computing,
Soft Computing Methods, Recent Trends in Soft Computing, Characteristics of Soft computing,
Applications of Soft Computing Techniques.

UNIT- II

[10 Periods]

Fuzzy Systems: Fuzzy Sets, Fuzzy Relations, Fuzzy Logic, Fuzzy Rule-Based Systems

UNIT- III

[09 Periods]

Fuzzy Decision Making, Particle Swarm Optimization

UNIT- IV**[10 Periods]**

Genetic Algorithms: Basic Concepts, Basic Operators for Genetic Algorithms, Crossover and Mutation Properties, Genetic Algorithm Cycle, Fitness Function, Applications of Genetic Algorithm.

UNIT- V**[10 Periods]**

Rough Sets, Rough Sets, Rule Induction, and Discernibility Matrix, Integration of Soft Computing Techniques.

TEXT BOOKS:

1. "Soft Computing and Intelligent Systems" – S.N. Sivanandam & S.N. Deepa

REFERENCE BOOKS

5. Gen, M. Cheng R., Genetic Algorithms and Engineering Optimization John Wiley & Sons. 2000

**2466656 - INTRODUCTION TO DEVOPS
(PROFESSIONAL ELECTIVE)**

III Year II Sem.

**L T P C
3 0 0 3**

Course Overview

The Introduction to DevOps course introduces students to modern software development practices that integrate development and operations teams to enable faster, more reliable, and continuous delivery of software products. The course covers Agile methodologies, DevOps lifecycle, version control, build and deployment automation, continuous testing, containerization, and infrastructure as code. Students learn to implement DevOps practices using tools such as Git, Jenkins, Docker, Selenium, Puppet, Ansible, and Chef.

Prerequisites:

1. Software Engineering
2. Software Project Management

Course Objectives:

- Understand DevOps principles, Agile practices, and continuous delivery pipelines.
- Apply DevOps lifecycle to software architecture and continuous testing.
- Manage source code and implement version control using Git and related tools.
- Integrate systems using build automation and infrastructure as code principles.
- Implement automated testing and deploy applications using modern DevOps tools.

Course Outcomes: After completion of the course, students should be able to

- Adopt the DevOps technology into the project.
- Understand the various components of DevOps environment.
- Identify Software development models and architectures of DevOps
- Use different project management and integration tools.
- Select an appropriate testing tool and deployment model for project.

UNIT-I Introduction to DevOps:

[09 Periods]

Introduction, Agile development model, DevOps and ITIL. DevOps process and Continuous Delivery, Release management, Scrum, Kanban, delivery pipeline, identifying bottlenecks.

UNIT-II Software development models and DevOps:

[10 Periods]

DevOps Lifecycle for Business Agility, DevOps, and Continuous Testing. DevOps influence on Architecture: Introducing software architecture, The monolithic scenario, Architecture rules of thumb, The separation of concerns, Handling database migrations, Micro services and the data tier, DevOps, architecture, and resilience.

UNIT-III Introduction to project management:**[10 Periods]**

The need for source code control, the history of source code management, Roles and code, source code management system and migrations, shared authentication, Hosted Git servers, Different Git server implementations, Docker intermission, Gerrit, The pull request model, GitLab.

UNIT-IV Integrating the system:**[09 Periods]**

Build systems, Jenkins build server, Managing build dependencies, Jenkins plugins, and file system layout, The host server, Build slaves, Software on the host, Triggers, Job chaining and build pipelines, Build servers and infrastructure as code, Building by dependency order, Build phases, Alternative build servers, Collating quality measures.

UNIT-V Testing Tools and Deployment:**[10 Periods]**

Various types of testing, Automation of testing Pros and cons, Selenium - Introduction, Selenium features, JavaScript testing, Testing backend integration points, Test-driven development, REPL-driven development. Deployment of the system: Deployment systems, Virtualization stacks, code execution at the client, Puppet master and agents, Ansible, Deployment tools: Chef, Salt Stack and Docker.

TEXT BOOKS:

1. Joakim Verona., Practical DevOps, Packt Publishing, 2016.

REFERENCE BOOK:

1. Deepak Gaikwad, Viral Thakkar. DevOps Tools from Practitioner's Viewpoint. Wiley publications.
2. Len Bass, Ingo Weber, Liming Zhu. DevOps: A Software Architect's Perspective. Addison Wesley

24X6641: ETHICAL HACKING

L T P C
3 0 0 3

Prerequisites: Operating Systems, Computer Networks

Course Objectives:

- To introduce the methodologies and framework of ethical hacking for enhancing security.
- To understand Impacts of Hacking; Types of Hackers; Information Security Models.
- To understand the methodologies, framework, and impacts of ethical hacking
- To Plan and execute a controlled, ethically-bounded security assessment by applying the hacker framework
- To explore Information Security Program, Business Perspective, Planning a Controlled Attack.

Course Outcomes: After completion of the course, students should be able to

- Understand availability of tools for supporting an ethical hack
- Gain the knowledge of interpreting the results of a controlled attack
- Explore the role of politics, inherent and imposed limitations and metrics for planning of a test
- Comprehend the dangers associated with penetration testing
- Differentiate among computer, network, service, application and architecture security models

MODULE – I

[10]

Introduction: Hacking Impacts, The Hacker Framework: Planning the test, Sound Operations, Reconnaissance, Enumeration, Vulnerability Analysis, Exploitation, Final Analysis, Deliverable, Integration

Information Security Models: Computer Security, Network Security, Service Security, Application Security, Security Architecture Information Security Program: The Process of Information Security, Component Parts of Information Security Program, Risk Analysis and Ethical Hacking

MODULE – II

[10]

The Business Perspective: Business Objectives, Security Policy, Previous Test Results, Business Challenges Planning for a Controlled Attack: Inherent Limitations, Imposed Limitations, timing is Everything, Attack Type, Source Point, Required Knowledge, Multi-Phased Attacks, Teaming and Attack Structure, Engagement Planner, The Right Security Consultant, The Tester, Logistics, Intermediates, Law Enforcement

MODULE – III [10]

Preparing for a Hack: Technical Preparation, Managing the Engagement Reconnaissance: Social Engineering, Physical Security, Internet Reconnaissance

MODULE – IV [10]

Enumeration: Enumeration Techniques, Soft Objective, Looking Around or Attack, Elements of Enumeration, Preparing for the Next Phase Exploitation: Intuitive Testing, Evasion, Threads and Groups, Operating Systems, Password Crackers, RootKits, applications, Wardialing, Network, Services and Areas of Concern

MODULE – V [8]

Deliverable: The Deliverable, The Document, Overall Structure, Aligning Findings, Presentation Integration: Integrating the Results, Integration Summary, Mitigation, Defense Planning, Incident Management, Security Policy, Conclusion

TEXT BOOK:

1. James S. Tiller, “The Ethical Hack: A Framework for Business Value Penetration Testing”, Auerbach Publications, CRC Press.

REFERENCE BOOKS:

1. EC-Council, “Ethical Hacking and Countermeasures Attack Phases”, Cengage Learning.

2. Michael Simpson, Kent Backman, James Corley, “Hands-On Ethical Hacking and Network Defense”, Cengage Learning

24X0530: NATURAL LANGUAGE PROCESSING

L	T	P	C
3	0	0	3

Prerequisites: Data structures, compiler design

Course Objectives:

- To understand the structure of words and documents, and explore morphological analysis techniques.
- To study syntax and parsing of natural language using data-driven approaches and treebanks.
- To address ambiguity resolution in parsing and analyze multilingual syntax issues.
- To explore semantic parsing, predicate-argument structures, and meaning representation systems.
- To learn language modeling techniques including n-gram models, Bayesian estimation, and multilingual adaptations.

Course Outcomes: After completion of the course, students should be able to

- Analyze the structure of words and documents using morphological models and feature extraction techniques.
- Apply parsing algorithms and treebank approaches for syntactic analysis of natural language.
- Resolve ambiguity in parsing and handle multilingual syntax challenges.
- Develop semantic parsing models and represent meaning using predicate-argument structures.
- Build language models using n-grams, Bayesian methods, and multilingual adaptations.

Module – I

[10]

Finding the Structure of Words: Words and Their Components, Issues and Challenges, Morphological Models.

Finding the Structure of Documents: Introduction, Methods, Complexity of the Approaches, Performances of the Approaches, Features

Module – II**[10]**

Syntax I: Parsing Natural Language, Treebanks: A Data-Driven Approach to Syntax, Representation of Syntactic Structure, Parsing Algorithms

Module – III**[10]**

Syntax II: Models for Ambiguity Resolution in Parsing, Multilingual Issues

Semantic Parsing I: Introduction, Semantic Interpretation, System Paradigms, Word Sense

Module – IV**[8]**

Semantic Parsing II: Predicate-Argument Structure, Meaning Representation Systems

Module – V**[10]**

Language Modeling: Introduction, N-Gram Models, Language Model Evaluation, Bayesian parameter estimation, Language Model Adaptation, Language Models-class based, variable length, Bayesian topic based, Multilingual and Cross Lingual Language Modeling

Text Books:

1. Multilingual natural Language Processing Applications: From Theory to Practice – Daniel M. Bikel and Imed Zitouni, Pearson Publication.

Reference Books:

1. Speech and Natural Language Processing - Daniel Jurafsky & James H Martin, Pearson Publications.
2. Natural Language Processing and Information Retrieval: Tanvier Siddiqui, U.S. Tiwary.

2460584: COMPILER DESIGN LABORATORY

B.Tech. III Year II Sem.

L T P C
0 0 2 1

Prerequisites: Java Programming Lab, Web Technologies Lab

Course Outcomes:

After completion of the course, students should be able to

- Apply lexical analysis techniques using LEX for identifying tokens, reserved words, and identifiers of a programming language.
- Analyze and implement parsing algorithms such as Predictive (LL(1)), SLR(1), and LALR parsers for given grammars.
- Apply intermediate code generation techniques by developing programs for producing Three-Address Code (TAC) for arithmetic and control statements.
- Analyze complex grammars and implement bottom-up parsing (SLR/LALR) for constructing syntax trees and handle ambiguity.
- Evaluate the design and implementation of a mini-compiler for a simple programming language with variable declarations, expressions, control structures, and scoping rules.

LIST OF EXPERIMENTS

Compiler Design Experiments

1. Write a LEX Program to scan reserved word & Identifiers of C Language
2. Implement Predictive Parsing algorithm
3. Write a C program to generate three address code.
4. Implement SLR (1) Parsing algorithm
5. Design LALR bottom-up parser for the given language

<empty>hasthe
```

obvious meaning

Comments (zero or more characters enclosed between the standard C/Java-style comment brackets /*...*/) can be inserted. The language has rudimentary support for 1- dimensional arrays. The declaration `int a[3]` declares an array of three elements, referenced as `a[0]`, `a[1]` and `a[2]`.

Note also that you should worry about the scoping of names.

A simple program written in this language is:

```
{
    int a[3], t1, t2;
    t1= 2;
    a[0] =1;
    a[1] =2;
    a[t1] =3;
    t2=- ( a[2] + t1 * 6 ) / ( a[2] - t1 );
    if    t2 > 5 then print(t2);
    else
    {
        int t3;
        t3=99;
        t2=-25;
        print(-t1 +t2 * t3 ); /*thisisa comment
        on2lines*/
    }
    endif
}
```

2460582: CRYPTOGRAPHY AND NETWORK SECURITY LAB

B.Tech. III Year II Sem.

L T P C
0 0 2 1

Prerequisites: Basic Concepts of Cryptography, Programming Knowledge, Java Programming Lab

Course Outcomes: The students will be able to:

- Demonstrate the knowledge of cryptography and network security concepts and applications.
- Understand and apply the concepts of symmetric encryption.
- Identify and investigate of Cryptographic Hash Functions.
- Understand the concepts of email security and PGP.
- Understand and apply web security mechanisms.

LIST OF EXPERIMENTS:

1. Write a C program that contains a string (char pointer) with a value `__Hello world'`. The program should XOR each character in this string with 0 and displays the result.
1. Write a C program that contains a string (char pointer) with a value `__Hello world'`. The program should AND or and XOR each character in this string with 127 and display the result.
2. Write a Java program to perform encryption and decryption using the following algorithms
 - a. Ceaser cipher
 - b. Substitution cipher
 - c. Hill Cipher
3. Write a C/JAVA program to implement the DES algorithm logic.
4. Write a C/JAVA program to implement the Blowfish algorithm logic.
5. Write the RC4 logic in Java Using Java cryptography; encrypt the text `—Hello worldll` using Blowfish. Create your own key using Java key tool.
6. Write a Java program to implement RSA algorithm.
7. Implement the Diffie-Hellman Key Exchange mechanism using HTML and JavaScript.
8. Calculate the message digest of a text using the SHA-1 algorithm in JAVA.
9. Calculate the message digest of a text using the MD5 algorithm in JAVA.

TEXT BOOKS:

1. Cryptography and Network Security by AtulKaha the MC Graw Hill, 2ndedition.
2. Cryptography and Network Security by William Stallings 6th Edition, Pearson Education.

REFERENCES:

1. Cryptography and Network Security by Behrouz A. Forouzan.
2. Applied Cryptographyl by Bruce Schneier.

24X0581: Artificial Intelligence Laboratory

L T P C
0 0 2 1

Course Outcomes: The students will be able to:

- Understand current of advanced AI technologies that enable machines to sense, comprehend, act and learn on their own.
- Distinguish class of problems suitable for solving with AI.
- Design, implement and evaluate a computing-based solution to meet a given set of computing requirements in the context of the AI.
- Design and create AI suitable for solving particular problem.
- Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.

LIST OF EXPERIMENTS:

1. Write a LISP code to perform Arithmetic operations.
2. Write a Recursive LISP function which takes one argument as a list and return reverse of the list.
3. Write a LISP function to compute difference of squares. (if $x > y$ return $x^2 - y^2$, Otherwise $y^2 - x^2$).
4. Write simple fact for following:
 - A. Ram likes mango.
 - B. Seema is a girl.
 - C. Bill likes Cindy.
 - D. Rose is red.
 - E. John owns gold
5. Write a prolog program that convert temperature from Celsius to Fahrenheit
6. Write simple Prolog functions such as the following. Take into account lists which are too short. --remove the Nth item from the list. -- insert as the Nth item.
7. Write a Program to Implement Tic-Tac-Toe game.
8. Write a Program to Implement 8-Puzzle problem
9. Write a Program to Implement Water-Jug problem
10. Write a Program to Implement Monkey Banana Problem.
11. Write a Program to Implement N-Queens Problem.
12. Write a Program to Implement Min-Max Algorithm.
13. Implementation of TSP using heuristic approach using Prolog
14. Implementation of Simulated Annealing Algorithm using PROLOG
15. Implementation of Hill-climbing to solve 8- Puzzle Problem
16. Write a Program see all elements are present in the list or not.
17. Write a Program to login so that user can attempt 3 times. After 3rd attempt program must terminate with message "NOT PERMITTED FOR LOGIN"

2460023: CONSTITUTION OF INDIA

B.Tech. II Year I Sem.

L/T/P/D/C

3/0/0/0/0

The Constitution of India is the supreme law of India. Parliament of India cannot make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the “basic structure” of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of “Constitutionalism” – a modern and progressive concept historically developed by the thinkers of “liberalism” – an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state. The historic revolutions in France, England, America and particularly European Renaissance and Reformation movement have resulted into progressive legal reforms in the form of “constitutionalism” in many countries. The Constitution of India was made by borrowing models and principles from many countries including United Kingdom and America.

The Constitution of India is not only a legal document but it also reflects social, political and economic perspectives of the Indian Society. It reflects India’s legacy of “diversity”. It has been said that Indian constitution reflects ideals of its freedom movement; however, few critics have argued that it does not truly incorporate our own ancient legal heritage and cultural values. No law can be “static” and therefore the Constitution of India has also been amended more than one hundred times. These amendments reflect political, social and economic developments since the year 1950. The Indian judiciary and particularly the Supreme Court of India has played an historic role as the guardian of people. It has been protecting not only basic ideals of the Constitution but also strengthened the same through progressive interpretations of the text of the Constitution. The judicial activism of the Supreme Court of India and its historic contributions has been recognized throughout the world and it gradually made it “as one of the strongest court in the world”.

Course content

1. Meaning of the constitution law and constitutionalism
2. Historical perspective of the Constitution of India
3. Salient features and characteristics of the Constitution of India

4. Scheme of the fundamental rights
5. The scheme of the Fundamental Duties and its legal status
6. The Directive Principles of State Policy – Its importance and implementation
7. Federal structure and distribution of legislative and financial powers between the Union and the States
8. Parliamentary Form of Government in India – The constitution powers and status of the President of India
9. Amendment of the Constitutional Powers and Procedure
10. The historical perspectives of the constitutional amendments in India
11. Emergency Provisions: National Emergency, President Rule, Financial Emergency
12. Local Self Government – Constitutional Scheme in India
13. Scheme of the Fundamental Right to Equality
14. Scheme of the Fundamental Right to certain Freedom under Article 19
15. Scope of the Right to Life and Personal Liberty under Article 21

IV-1

24X0010: BUSINESS ECONOMICS AND FINANCIAL ANALYSIS

B.Tech. IV Year I Sem.

L T P C

3 0 0 3

Course Objective:

To learn the basic Business types, impact of the Economy on Business and Firms specifically

To analyze the Business from the Financial Perspective.

UNIT – I: Introduction to Business and Economics

Business: Structure of Business Firm, Theory of Firm, Types of Business Entities, Limited Liability Companies, Sources of Capital for a Company, Non-Conventional Sources of Finance.

Economics: Significance of Economics, Micro and Macro Economic Concepts, Concepts and Importance of National Income, Inflation, Money Supply in Inflation, Business Cycle, Features and Phases of Business Cycle. Nature and Scope of Business Economics, Role of Business Economist, Multidisciplinary nature of Business Economics.

UNIT – II: Demand and Supply Analysis

Elasticity of Demand: Elasticity, Types of Elasticity, Law of Demand, Measurement and Significance of Elasticity of Demand, Factors affecting Elasticity of Demand, Elasticity of Demand in decision making, Demand Forecasting: Characteristics of Good Demand Forecasting, Steps in Demand Forecasting, Methods of Demand Forecasting.

Supply Analysis: Determinants of Supply, Supply Function & Law of Supply.

UNIT – III: Production, Cost, Market Structures & Pricing

Production Analysis: Factors of Production, Production Function, Production Function with onevariable input, two variable inputs, Returns to Scale, Different Types of Production Functions.

Cost analysis: Types of Costs, Short run and Long run Cost Functions.

Market Structures: Nature of Competition, Features of Perfect competition, Monopoly, Oligopoly, Monopolistic Competition.

Pricing: Types of Pricing, Product Life Cycle based Pricing, Break Even Analysis, Cost Volume Profit Analysis.

UNIT – IV: Financial Accounting: Accounting concepts and Conventions, Accounting Equation, Double-Entry system of Accounting, Rules for maintaining Books of Accounts, Journal, Posting to Ledger, Preparation of Trial Balance, Elements

of Financial Statements, Preparation of Final Accounts.

UNIT – V: Financial Analysis through Ratios: Concept of Ratio Analysis, Liquidity Ratios, Turnover Ratios, Profitability Ratios, Proprietary Ratios, Solvency, Leverage Ratios (simple problems). Introduction to Fund Flow and Cash Flow Analysis (simple problems).

TEXT BOOKS:

1. D. D. Chaturvedi, S. L. Gupta, Business Economics - Theory and Applications, International Book House Pvt. Ltd. 2013.
2. Dhanesh K Khatri, Financial Accounting, Tata McGraw Hill, 2011.
3. Geethika Ghosh, Piyali Gosh, Purba Roy Choudhury, Managerial Economics, 2e, Tata McGrawHill Education Pvt. Ltd. 2012.

REFERENCE BOOKS:

1. Paresh Shah, Financial Accounting for Management 2e, Oxford Press, 2015.
2. S. N. Maheshwari, Sunil K Maheshwari, Sharad K Maheshwari, Financial Accounting, 5e, Vikas Publications, 2013.

2470537: Business Intelligence

B.Tech. IV Year I Sem.

L T P C
3 0 0 3

Course Overview

This course introduces students to the fundamental concepts, models, and applications of Business Intelligence (BI) for effective decision-making in organizations. Students will learn how data is transformed into actionable insights through mathematical models, data mining, knowledge management, and emerging BI technologies. The course emphasizes both the theoretical foundations and real-world applications, enabling students to analyze business data, build decision support systems, and explore the future of intelligent business solutions.

Prerequisites: Data Base Management Systems

Course Objectives

- To enable students to understand the architecture, components, and development of Business Intelligence systems for effective decision-making.
- To provide knowledge of mathematical models and data mining techniques for structured analysis and decision support.
- To apply BI techniques in real-world domains such as marketing, logistics, production, and efficiency analysis.
- To develop an understanding of knowledge management practices, AI concepts, and expert systems in business intelligence.
- To explore emerging technologies, machine learning, and visualization trends shaping the future of BI

Course Outcomes: After completion of the course, students should be able to

- Explain the fundamentals of business intelligence.
- Link data mining with business intelligence.
- Apply various modeling techniques.
- Analyze the data analysis and knowledge delivery stages.
- Evaluate various business intelligence methods to various situations.

UNIT I: Business Intelligence:

[10 Periods]

Business intelligence: Effective and timely decisions, Data, information and knowledge, The role of mathematical models, Business intelligence architectures, Cycle of a business intelligence analysis Enabling factors in business intelligence projects Development of a business intelligence system - Ethics and business intelligence. Decision support systems: Definition of system, Representation of the decision-making process, Evolution of information systems, Definition of decision support system, Development of a decision support system

UNIT II: Mathematical models for decision making:

[09 Periods]

Structure of mathematical models, development of a model, Classes of models Data mining: Definition of data mining, Representation of input data, Data mining process, Analysis methodologies, Data preparation: Data validation,

Data transformation, Data reduction.

UNIT III: Business intelligence applications

[10 Periods]

Marketing models: Relational marketing, Sales force management, Logistic and production models: Supply chain optimization, Optimization models for logistics planning, Revenue management systems. Data envelopment analysis: Efficiency measures, Efficient frontier, The CCR model, Identification of good operating practices.

UNIT-IV: Knowledge Management:

[09 Periods]

Introduction to Knowledge Management ,Organizational Learning and Transformation, Knowledge Management Activities, Approaches to Knowledge Management, Information Technology (IT) In Knowledge Management, Knowledge Management Systems Implementation, Roles of People in Knowledge Management Artificial Intelligence and Expert Systems: Concepts and Definitions of Artificial Intelligence, Artificial Intelligence Versus Natural Intelligence, Basic Concepts of Expert Systems, Applications of Expert Systems, Structure of Expert Systems, Knowledge Engineering, Development of Expert Systems

UNIT-V: Future of Business Intelligence

[10 Periods]

Emerging Technologies, Machine Learning, Predicting the Future with the help of Data Analysis, BI Search & Text Analytics – Advanced Visualization – Rich Report, Future beyond Technology.

TEXT BOOK:

1. Business Intelligence: Data Mining and Optimization for Decision Making by Carlo Verzellis, Wiley India Publications.
2. Efraim Turban, Ramesh Sharda, Dursun Delen, “Decision Support and Business Intelligence Systems”, 9th Edition, Pearson 2013.

3. Michael Berry and Gordon Linoff “Mastering Data Mining- Art & science of CRM”, Wiley Student Edition Vikram Pudi & Radha Krishna, “Data Mining”, Oxford Higher Education.

2476701-DATA WAREHOUSING AND DATA MINING

IV Year B.Tech. I – Sem.

L T P C
2 0 0 2

Prerequisites: NIL

Course Overview

This course introduces the principles and techniques of Data Warehousing and Data Mining, focusing on the design of data warehouses, data preprocessing, classification, association rule mining, and clustering. Students will learn to model multidimensional data, apply mining algorithms, and analyze real-world datasets. The course equips learners with the skills to transform raw data into meaningful patterns and insights for decision support, aligning with industry practices in business analytics and big data.

Course Objectives:

- Be familiar with mathematical foundations of data mining tools.
- Understand and implement classical models and algorithms in data warehouses and datamining.
- Characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- Master data mining techniques in various applications like social, scientific and environmental context.
- Develop skill in selecting the appropriate data mining algorithm for solving practical problems.

Course Outcomes: After completion of the course, students should be able to

- Understand the functionality of the various data mining and data warehousing component.
- Appreciate the strengths and limitations of various data mining and data warehousing models.
- Explain the analyzing techniques of various data.
- Describe different methodologies used in data mining and data warehousing.
- Compare different approaches of data warehousing and data mining with various technologies. Evaluating

UNIT – I:

[10 Periods]

Data Warehouse basic concepts: what is a Data warehouse, Differences between operational data base systems and data Warehouse, Architecture, Models, Extraction-Transformation- Loading, Metadata repository.

Data Warehousing Modeling, Data Cube, star and snow-Flake Schema, Fact Constellation, Dimensions, Measures, OLAP Operations.

UNIT -II**[09 Periods]**

Introduction to Data Mining: Introduction, What is Data Mining, KDD
Data Preprocessing- Data processing overview, Data Cleaning, Data integration,
Data Reduction, Data Transformation and Data Discretization.

UNIT -III**[10 Periods]**

Classification: Preliminaries, General Approaches to solving a classification
problem, Decision trees-Induction, Decision Tree Construction, nearest
neighbor classifier, Bayesian classifier, ANN, SVM.

UNIT – IV**[09 Periods]**

Association Rules: Problem Definition, Frequent Item Set Generation, The
APRIORI Principle, Rule Generation- Rule Generation in APRIORI Algorithm,
Compact Representation of Frequent Item Set-Maximal Frequent Item Set,
Closed Frequent Item Set, FP-Growth Algorithms.

UNIT – V**[10 Periods]**

Cluster Analysis: Clustering overview, different types of clustering, K-Means
Algorithm-K- Means Additional Issues, PAM Algorithm, Agglomerative
Hierarchical Clustering Algorithm, Specific techniques, Key Issues in
Hierarchical Clustering, Strengths and weakness, DBSCAN, Cluster evolution.

TEXT BOOK:

1. Data Mining-Concepts and Techniques- Jiawei Han, Micheline Kamber,
Morgan Kaufmann Publishers, Elsevier, 2 Edition, 2006. (UNIT 1 and 2)
2. Introduction to Data Mining, Pang-Ning Tan, Vipin Kumar, Michael
Steinbach, Pearson Education. (. (UNIT 3,4 and 5).

REFERENCES:

1. Data Mining Techniques, Arun K Pujari, 3rd Edition, Universities Press.
2. Data Ware Housing Fundamentals, PualrajPonnaiah, Wiley Student Edition
3. The Data Ware House Life Cycle Toolkit- Ralph Kimball, Wiley Student
Edition.
4. Data Mining, VikaramPudi, P Radha Krishna, Oxford University.

**2470521: Software Testing Methodologies
(Professional Elective)**

IV B.Tech. I-Sem.

**L T P C
3 0 0 3**

Course Overview:

The course offers an in-depth exploration of software testing principles, techniques, and tools. It emphasizes both theoretical foundations and practical applications, covering various testing methodologies such as unit, integration, system, and object-oriented testing. Students will gain proficiency in designing test cases, understanding test processes, and utilizing automation tools to ensure software quality.

Prerequisites: Software Engineering

Course Objectives: The students will try to learn

- Understand the fundamental concepts of software testing, including the purpose of testing, bug taxonomy, and the software testing life cycle.
- Apply structural testing techniques such as flow graph-based path testing and data flow testing to detect software defects.
- Analyze and implement domain, interface, and logic-based testing methods to verify software functionality and boundary conditions.
- Design state-based and transition tests using state graphs and transition diagrams for dynamic system behavior testing.
- Utilize graph theory and software testing tools (e.g., JMeter, WinRunner) to model software behavior and automate testing processes.

Course Outcomes: After completion of the course, students should be able to

- Identify different types of software bugs and apply suitable testing models and strategies.
- Develop and execute flow graph, path-based, transaction, and dataflow test cases.
- Perform domain and interface testing using boundary analysis and logic-based methods like decision tables and KV charts.
- Design state transition tests and analyze software using graph matrices and node reduction techniques.
- Use automated testing tools to implement real-world testing scenarios and improve software quality.

Unit-I:

[10 Periods]

Introduction:- Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs, Flow graphs and Path testing:- Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

Unit-II:

[9 Periods]

Transaction Flow Testing:- transaction flows, transaction flow testing techniques.

Dataflow testing:- Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing.

Unit-III:

[9 Periods]

Domain Testing:- domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability.

Unit-IV:

[10 Periods]

Paths, Path products and Regular expressions:- path products & path expression,

reduction procedure, applications, regular expressions & flow anomaly detection.

Logic Based Testing:- overview, decision tables, path expressions, kv charts, specifications.

Unit-V: State, State Graphs and Transition testing:-

[10 Periods]

state graphs, good & bad state graphs, state testing, Testability tips. Graph Matrices and Application:-Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. (Student should be given an exposure to a tool like JMeter or Win-runner).

TEXT BOOKS :

1. Software Testing techniques – Baris Beizer, Dreamtech, second edition.
2. Software Testing Tools – Dr.K.V.K.K.Prasad, Dreamtech.

REFERENCES :

1. The craft of software testing – Brian Marick, Pearson Education.
2. Software Testing Techniques – SPD(Oreille)
3. Software Testing in the Real World – Edward Kit, Pearson.
4. Effective methods of Software Testing, Perry, John Wiley.
5. Art of Software Testing – Meyers, John Wiley.

24X0544: FULL STACK DEVELOPMENT

L T P C

3 0 0 3

Pre-Requisites: Object Oriented Programming using JAVA

Course Outcomes: After completion of the course, students should be able to

- Understand Full stack components for developing web application.
- Apply packages of NodeJS to work with Data, Files, HttpRequests and Responses.
- Use MongoDB data base for storing and processing huge data and connects with Node JS application.
- Design faster and effective single page applications using Express and Angular.
- Create interactive user interfaces with react components.

Module-I

[10]

Introduction to Full Stack Development:

Understanding the Basic Web Development Framework- User, Browser, Web server, Backend Services, Full Stack Components - Node.js, MongoDB, Express, React, Angular. Java Script Fundamentals, Node JS- Understanding Node.js, Installing Node.js, Working with Node Packages, creating a Node.js Application, Understanding the Node.js Event Model, Adding Work to the Event Queue, Implementing Callbacks

Module-II

[10]

Node.js:

Working with JSON, Using the BufferModule to BufferData, Using the Stream Module to Stream Data, Accessing the File System from Node .js- Opening, Closing, Writing, Reading Files and other File System Tasks.

Implementing HTTP Services in Node.js-Processing URLs, Processing Query Strings and Form Parameters, Understanding Request, Response, and Server Objects, Implementing HTTP Clients and Servers in Node.js, Implementing HTTPS Servers and Clients. Using Additional Node.js Modules-Using the os Module, Using the util Module, Using the dns Module, Using the crypto Module.

Module-III**[10]****MongoDB:**

Need of NoSQL, Understanding MongoDB, MongoDB Data Types, Planning Your Data Model, Building the MongoDB Environment, Administering User Accounts, Configuring Access Control, Administering Databases, Managing Collections, Adding the MongoDB Driver to Node.js, Connecting to MongoDB from Node.js, Understanding the Objects Used in the MongoDB Node.js Driver, Accessing and Manipulating Databases, Accessing and Manipulating Collections

Module-IV**[10]****Express and Angular:**

Getting Started with Express, Configuring Routes, Using Requests Objects, Using Response Objects. Angular: importance of Angular, Understanding Angular, creating a Basic Angular Application, Angular Components, Expressions, Data Binding, Built-in Directives, Custom Directives, Implementing Angular Services in Web Applications.

Module-V**[8]****React:**

Need of React, Simple React Structure, The Virtual DOM, React Components, Introducing React Components, Creating Components in React, Data and Data Flow in React, Rendering and Lifecycle Methods in React, Working with forms in React, integrating third party libraries, Routing in React.

TEXTBOOKS:

1. Brad Dayley, Brendan Dayley, Caleb Dayley., Node.js, MongoDB and Angular Web Development, 2nd Edition, Addison-Wesley, 2019.
2. Mark Tielens Thomas, React in Action, 1st Edition, Manning Publications.

3. Kirupa Chinnathambi, Learning React: A Hands-

OnGuidetoBuildingWebApplicationsUsing React and Redux,
2nd edition, Addison-Wesley Professional, 2018.

2476648 - Reinforcement Learning
(Professional Elective)

B.Tech. IV Year I Sem.

L T P C
3 0 0 3

Course Overview

This course introduces the principles and methods of Reinforcement Learning (RL), a core area in Artificial Intelligence. It covers stochastic decision-making models, Markov Decision Processes, prediction and control techniques, model-based and model-free learning algorithms, temporal-difference methods, function approximation, and policy gradient methods. Students will develop an understanding of how agents learn to make sequential decisions, implement RL algorithms, and apply them to real-world problems such as robotics, games, and business analytics.

Course Objectives:

- Understand the foundations of probability, linear algebra, stochastic bandits, regret minimization, and basic exploration–exploitation algorithms.
- Apply Markov Decision Processes, reward models, and dynamic programming methods for solving sequential decision-making tasks.
- Analyze prediction and control problems using model-based methods and Monte Carlo techniques.
- Implement temporal-difference methods and model-free control algorithms like Q-learning and Sarsa.
- Apply advanced RL methods such as TD(λ), function approximation, policy gradients, and experience replay to practical case studies

Course Outcomes: After completion of the course, students should be able to

- Explain stochastic multi-armed bandit problems and apply algorithms such as UCB, KL-UCB, and Thompson Sampling to minimize regret.
- Model sequential decision-making problems using Markov Decision Processes and solve them with value and policy iteration techniques.
- Implement Monte Carlo methods for prediction and control in reinforcement learning tasks.
- Apply and compare temporal difference learning algorithms including TD(0), Q-learning, and Sarsa for model-free control.
- Utilize advanced reinforcement learning methods such as TD(λ), function approximation, and policy gradients in practical case studies.

UNIT – I

[09 Periods]

Basics of probability and linear algebra, Definition of a stochastic multi-armed bandit, Definition of regret, Achieving sublinear regret, UCB algorithm, KL-UCB, Thompson Sampling.

UNIT – II

[10 Periods]

Markov Decision Problem, policy, and value function, Reward models (infinite discounted, total, finite horizon, and average), Episodic & continuing tasks, Bellman's optimality operator, and Value iteration

& policy iteration

UNIT – III

[09 Periods]

The Reinforcement Learning problem, prediction and control problems, Model-based algorithm, Monte Carlo methods for prediction, and Online implementation of Monte Carlo policy evaluation

UNIT – IV

[10 Periods]

Bootstrapping; TD(0) algorithm; Convergence of Monte Carlo and batch TD(0) algorithms; Model-free control: Q-learning, Sarsa, Expected Sarsa.

UNIT – V

[10 Periods]

n-step returns; TD(λ) algorithm; Need for generalization in practice; Linear function approximation and geometric view; Linear TD(λ). Tile coding; Control with function approximation; Policy search; Policy gradient methods; Experience replay; Fitted Q Iteration; Case studies.

TEXT BOOKS:

1. “Reinforcement learning: An introduction,” First Edition, Sutton, Richard S., and Andrew G. Barto, MIT press 2020.
2. “Statistical reinforcement learning: modern machine learning approaches,” First Edition, Sugiyama, Masashi. CRC Press 2015.

REFERENCE BOOKS:

1. “Bandit algorithms,” First Edition, Lattimore, T. and C. Szepesvári. Cambridge University Press. 2020.
2. “Reinforcement Learning Algorithms: Analysis and Applications,” Boris Belousov, Hany Abdulsamad, Pascal Klink, Simone Parisi, and Jan Peters First Edition, Springer 2021.
3. Alexander Zai and Brandon Brown “Deep Reinforcement Learning in Action,” First Edition, Manning Publications 2020.

2476704: LINUX PROGRAMMING

(Professional Elective)

B.Tech. IV Year - I Sem

L T P C

3 0 0 3

Course Overview

This course introduces the fundamentals of Linux operating system and programming utilities, enabling students to acquire practical skills in Linux commands, shell programming, file management, process handling, signals, and inter-process communication. Students will learn to build Linux-based applications by leveraging system calls, process synchronization, and network communication primitives. By the end, learners will gain proficiency in Linux programming for real-world problem-solving in system-level and application-level development.

Prerequisites:

- A course on “Operating Systems”.
- A course on “Computer Organization”

Course Objectives:

- To teach principles of operating system including File handling utilities, Security by file permissions.
- To identify Process utilities, Disk utilities, Networking Commands, Basic Linux commands, Scripts and filters.
- To familiarize fundamentals of the Bourne again shell (bash), shell programming, pipes, input and output redirection Control structures, arithmetic in shell interrupt processing, functions, debugging shell scripts.
- To facilitate students in understanding Inter process communication.
- To facilitate students in understanding semaphore, shared memory and process.

Course Outcomes: After completion of the course, students should be able to

- Use various Linux commands that are used to manipulate system operations at admin level and a prerequisite to pursue job as a Network administrator.
- Write Shell Programming using Linux commands.
- Design and write application to manipulate internal kernel level Linux File System.
- Develop IPC-API's that can be used to control various processes for synchronization.
- Apply Network Programming that allows applications to make efficient use of resources available on different machines in a network.

UNIT-I

[10 Periods]

INTRODUCTION TO LINUX AND LINUX UTILITIES: A brief history of LINUX, architecture of LINUX, features of LINUX, introduction to vi editor. Linux commands- PATH, man, echo, printf, script, passwd, uname, who, date, stty, pwd, cd, mkdir, rmdir, ls, cp, mv, rm, cat, more, wc, lp, od, tar, gzip, file handling utilities, security by file permissions, process utilities, disk utilities, networking

commands, unlink, du, df, mount, umount, find, unmask, ulimit, ps, w, finger, arp, ftp, telnet, rlogin. Text Processing utilities and backup utilities , tail, head , sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm, cmp, diff, tr, awk, cpio.

UNIT-II

[09 Periods]

Introduction to Shells: Linux Session, Standard Streams, Redirection, Pipes, Tee Command, Command Execution, Command-Line Editing, Quotes, Command Substitution, Job Control, Aliases, Variables, Predefined Variables, Options, Shell/Environment Customization. Filters: Filters and Pipes, Concatenating files, Display Beginning and End of files, Cut and Paste, Sorting, Translating Characters, Files with Duplicate Lines, Count Characters, Words or Lines, Comparing Files.

UNIT_III

[09 Periods]

Grep: Operation, grep Family, Searching for File Content. Sed :Scripts, Operation, Addresses, commands, Applications, grep and sed. UNIX FILE STRUCTURE: Introduction to UNIX file system, inode (Index Node), file descriptors, system calls and device drivers. File Management :File Structures, System Calls for File Management – create, open, close, read, write, lseek, link, symlink, unlink, stat, fstat, lstat, chmod, chown, Directory API – opendir, readdir, closedir, mkdir, rmdir, umask.

UNIT_IV

[10 Periods]

PROCESS AND SIGNALS: Process, process identifiers, process structure: process table, viewing processes, system processes, process scheduling, starting new processes: waiting for a process, zombie processes, orphan process, fork, vfork, exit, wait, waitpid, exec, signals functions, unreliable signals, interrupted system calls, kill, raise, alarm, pause, abort, system,sleep functions, signal sets. File locking: creating lock files, locking regions, use of read and write with locking, competing locks, other lock commands, deadlocks.

UNIT-V

[10 Periods]

INTER PROCESS COMMUNICATION: Pipe, process pipes, the pipe call, parent and child processes, and named pipes: fifos, semaphores: semget, semop, semctl, message queues: msgget, msgsnd, msgrcv, msgctl, shared memory: shmget, shmat, shmdt, shmctl, ipc status commands. INTRODUCTION TO SOCKETS: Socket, socket connections - socket attributes, socket addresses, socket, connect, bind, listen, accept, socket communications.

TEXTBOOKS:

1. W. Richard. Stevens (2005), Advanced Programming in the UNIX Environment, 3rd edition, Pearson Education, New Delhi, India.
2. Unix and shell Programming Behrouz A. Forouzan, Richard F. Gilberg.Thomson

REFERENCES:

2. Advanced Programming in the UNIX environment, 2nd Edition, W.R.Stevens, Pearson Education.
3. UNIX Network Programming, W.R. Stevens, PHI. UNIX for Programmers and Users, 3rd Edition, Graham Glass, King Ables, Pearson Education

24X0533: DATA ANALYTICS

L T P C
3 0 0 3

Prerequisites: Database management Systems

Course Objectives:

- To explore the fundamental concepts of data analytics.
- To learn the principles and methods of statistical analysis
- Discover interesting patterns, analyze supervised and unsupervised models and estimate the accuracy of the algorithms.
- To understand the various search methods and visualization techniques.

Course Outcomes: After completion of this course, students should be able to

- Understand the impact of data analytics for business decisions and strategy
- Perform data analysis/statistical analysis
- Do standard data visualization and formal inference procedures
- Design Data Architecture
- Utilize various Data Sources

Module – I

[10]

Data Management: Design Data Architecture and manage the data for analysis, understand various sources of Data like Sensors/Signals/GPS etc. Data Management, Data Quality(noise, outliers, missing values, duplicate data) and Data Processing & Processing.

Module – II

[10]

Data Analytics: Introduction to Analytics, Introduction to Tools and Environment, Application of Modeling in Business, Databases & Types of Data and variables, Data Modeling Techniques, Missing Imputations. Need for Business Modeling.

Module – III

[10]

Regression – Concepts, Blue property assumptions, Least Square Estimation, Variable Rationalization, and Model Building etc.

Logistic Regression: Model Theory, Model fit Statistics, Model Construction, Analytics applications to various Business Domains etc.

Module – IV

[8]

Object Segmentation: Regression Vs Segmentation – Supervised and

Unsupervised Learning, Tree Building – Regression, Classification, Overfitting, Pruning and Complexity, Multiple Decision Trees etc. Time Series Methods: Arima, Measures of Forecast Accuracy, STL approach, Extract features from generated model as Height, Average Energy etc. and analyze for prediction

Module – V

[10]

Data Visualization: Pixel-Oriented Visualization Techniques, Geometric Projection Visualization Techniques, Icon-Based Visualization Techniques, Hierarchical Visualization Techniques, Visualizing Complex Data and Relations.

TEXT BOOKS:

1. Student's Handbook for Associate Analytics – II, III.
2. Data Mining Concepts and Techniques, Han, Kamber, 3rd Edition, Morgan Kaufmann Publishers.

REFERENCE BOOKS:

1. Introduction to Data Mining, Tan, Steinbach and Kumar, Addison Wesley, 2006.
2. Data Mining Analysis and Concepts, M. Zaki and W. Meira
3. Mining of Massive Datasets, Jure Leskovec Stanford Univ. Anand Rajaraman Millway Labs Jeffrey D Ullman Stanford Univ.

24X6603: EXPERT SYSTEMS

L T P C
3 0 0 3

Course Objectives:

- Understand the basic techniques of artificial intelligence.
- Knows the Non-monotonic reasoning and statistical reasoning.
- Provide a thorough understanding of fundamental artificial intelligence techniques including search strategies, game playing, and heuristic algorithms.
- Introduce knowledge representation methods such as predicate logic, semantic nets, frames, rules-based systems, and constraint propagation.
- Explain the concepts, architecture, and organization of expert systems and their application to problem-solving.

Course Outcomes: After completion of the course, student should be able to

- Apply the basic techniques of artificial intelligence.
- Discuss the architecture of an expert system and its tools.
- Understand the importance of building an expert systems
- Apply basic AI techniques, including blind search, heuristic search, and game-playing algorithms.
- Demonstrate various knowledge representation techniques and implement rules-based deduction systems for structured problem-solving.

MODULE – I

[10]

Introduction to AI programming languages, Blind search strategies, Breadth-first – Depth-first –Heuristic search techniques Hill Climbing – Best first – A Algorithms AO* algorithm – game trees, Minmax algorithms, game playing – Alpha-beta pruning.

MODULE – II

[10]

Knowledge representation issues predicate logic – logic programming Semantic nets- frames and inheritance, constraint propagation; Representing Knowledge using rules, Rules-based deduction systems.

MODULE – III [10]
Introduction to Expert Systems, Architecture of expert systems, Representation and organization of knowledge, Basics characteristics, and types of problems handled by expert systems.

MODULE – IV [10]
Expert System Tools: Techniques of knowledge representations in expert systems, knowledge engineering, system-building aids, support facilities, stages in the development of expert systems.

MODULE – V [8]
Building an Expert System: Expert system development, Selection of the tool, Acquiring Knowledge, Building process.

Problems with Expert Systems: Difficulties, common pitfalls in planning, dealing with domain experts, difficulties during development.

TEXT BOOKS:

1. Elain Rich and Kevin Knight, “Artificial Intelligence”, Tata McGraw-Hill, New Delhi.
2. Waterman D.A., “A Guide to Expert Systems”, Addison Wesley Longman.

REFERENCE BOOKS:

2470522: Distributed Systems

(Professional Elective)

B.Tech. IV Year I Sem.

L T P C

3 0 0 3

Course Overview

This course introduces the principles, architectures, and design techniques of Distributed Systems. It covers resource sharing, communication protocols, distributed objects, operating system support, file systems, peer-to-peer systems, synchronization, coordination, transactions, replication, and distributed shared memory. Students will gain a strong understanding of building, managing, and analyzing distributed systems for scalability, reliability, and fault tolerance in real-world computing environments.

Prerequisites:

1. A course on “Operating Systems”.
2. A course on “Computer Organization & Architecture”.

Course Objectives:

- Understand distributed system concepts, architectures, and remote invocation techniques like RPC and Java RMI.
- Analyze operating system support for distributed systems and distributed file system architectures.
- Apply peer-to-peer models, synchronization, global states, and coordination algorithms in distributed systems.
- Implement transaction management, concurrency control, and deadlock handling in distributed systems.
- Create replication strategies and design distributed shared memory with consistency models

Course Outcomes: After completion of the course, students should be able to

- Demonstrate knowledge of distributed architectures, communication models, and remote object invocation.
- Apply OS-level support mechanisms and distributed file system concepts for resource sharing.
- Analyze peer-to-peer systems, synchronize distributed processes, and implement coordination protocols.
- Design and evaluate transaction processing and concurrency control mechanisms.
- Develop fault-tolerant replicated systems and manage distributed shared memory consistency.

UNIT – I

[10 Periods]

Characterization of Distributed Systems: Examples of Distributed systems, Resource sharing and web, challenges

System models: Architectural and Fundamental models, Networking and Internetworking, Interprocess Communication

Distributed objects and Remote Invocation: Communication between distributed objects, RPC, Events and notifications, Case study-Java RMI.

UNIT – II

[09 Periods]

Operating System Support- OS layer, Protection, Processes and Threads, Communication and Invocation, Operating system architecture.

Distributed File Systems-Introduction, File Service architecture.

UNIT – III

[10 Periods]

Peer to Peer Systems- Napster and its legacy, Peer to Peer middleware

Time and Global States-Introduction, Clocks, events and Process states, Synchronizing physical clocks, logical time and logical clocks, global states, distributed debugging.

Coordination and Agreement- Distributed mutual exclusion, Elections, Multicast communication, consensus and related problems.

UNIT – IV

[09 Periods]

Transactions and Concurrency Control- Introduction, Transactions, Nested Transactions, Locks, Optimistic concurrency control, Timestamp ordering.

Distributed Transactions-Introduction, Flat and Nested Distributed Transactions, Atomic commit protocols, Concurrency control in distributed transactions

Distributed deadlocks: Transaction recovery.

UNIT – V

[10 Periods]

Replication: Introduction, System model and group communication, Fault tolerant services, Transactions with replicated data.

Distributed shared memory: Design and Implementation issues, Consistency models.

TEXT BOOKS:

1. Distributed Systems Concepts and Design, G Coulouris, J Dollimore and T Kindberg, Fourth Edition, Pearson Education.
2. Distributed Systems, S. Ghosh, Chapman & Hall/CRC, Taylor & Francis Group, 2010.

REFERENCE BOOKS:

1. Distributed Systems – Principles and Paradigms, A.S. Tanenbaum and M.V. Steen, Pearson Education.
2. Distributed Computing, Principles, Algorithms and Systems, Ajay D. Kshemakalyani and Mukesh Singhal, Cambridge, rp 2010.

2470535: Mobile Application Development

(Professional Elective)

B.Tech. IV Year I Sem.

L T P C
3 0 0 3

Course Overview

This course offers a comprehensive introduction to Android Operating System and application development, designed to equip learners with practical skills in building robust Android applications using the Android Studio environment.

Prerequisites

1. Acquaintance with JAVA programming
2. A Course on DBMS

Course Objectives

- To demonstrate their understanding of the fundamentals of Android operating systems
- To improve their skills of using Android software development tools
- To demonstrate their ability to develop software with reasonable complexity on mobile platform
- To demonstrate their ability to deploy software to mobile devices
- To demonstrate their ability to debug programs running on mobile devices

Course Outcomes: After completion of the course, students should be able to

- Understand Android OS architecture, application components, and activity lifecycle for building Android apps.
- Design and implement responsive Android UIs using layouts, UI components, event handling, and fragments.
- Apply intents, broadcast receivers, and notifications to enable inter-component communication.
- Implement file-based and shared preference storage to persist application data.
- Develop Android apps using SQLite databases and content providers for structured data management.

UNIT-I

[10 Periods]

Introduction to Android Operating System: Android OS design and Features – Android development framework, SDK features, Installing and running applications on Android Studio, Creating AVDs, Types of Android applications, Best practices in Android programming, Android tools Android application components – Android Manifest file, Externalizing resources like values, themes, layouts, Menus etc, Resources for different devices and languages, Runtime Configuration Changes

Android Application Lifecycle – Activities, Activity lifecycle, activity states, monitoring state changes

UNIT – II

[10 Periods]

Android User Interface: Measurements – Device and pixel density independent measuring unit - s Layouts – Linear, Relative, Grid and Table Layouts

User Interface (UI) Components –Editable and non-editable Text Views, Buttons, Radio and Toggle Buttons, Checkboxes, Spinners, Dialog and pickers
Event Handling – Handling clicks or changes of various UI components
Fragments – Creating fragments, Lifecycle of fragments, Fragment states, Adding fragments to Activity, adding, removing and replacing fragments with fragment transactions, interfacing between fragments and Activities, Multi-screen Activities

UNIT – III

[09 Periods]

Intents and Broadcasts: Intent – Using intents to launch Activities, Explicitly starting new Activity, Implicit Intents, Passing data to Intents, Getting results from Activities, Native Actions, using Intent to dial a number or to send SMS

Broadcast Receivers – Using Intent filters to service implicit Intents, Resolving Intent filters, finding and using Intents received within an Activity

Notifications – Creating and Displaying notifications, Displaying Toasts

UNIT – IV

[09 Periods]

Persistent Storage: Files – Using application specific folders and files, creating files, reading data from files, listing contents of a directory Shared Preferences – Creating shared preferences, saving and retrieving data using Shared Preference

UNIT-V

[10 Periods]

Database – Introduction to SQLite database, creating and opening a database, creating tables, inserting retrieving and etindelg data, Registering Content Providers, Using content Providers (insert, delete, retrieve and update)

TEXT BOOK:

1. Professional Android 4 Application Development, Reto Meier, Wiley India, (Wrox), 2012

REFERENCE BOOKS:

2. Beginning Android 4 Application Development, Wei-Meng Lee, Wiley India (Wrox), 2013

2476771-DATA WAREHOUSING AND DATA MINING LAB

IV Year B.Tech. I – Sem.

L T P C
0 0 2 1

Course Overview

The Data Warehousing and Data Mining Lab provides practical exposure to data preprocessing, mining, and visualization techniques using tools like WEKA and ARFF datasets. Students learn to preprocess data, handle missing values, perform discretization, and eliminate outliers. The lab emphasizes applying association rule mining, classification, regression, and clustering algorithms (k-Means, DBSCAN, EM) on real datasets to extract meaningful patterns and insights for decision-making.

Prerequisites: NIL

Course Objectives:

- Understand and explore WEKA tool and its application interfaces.
- Preprocess datasets effectively, including attribute selection, handling missing values, discretization, and outlier removal.
- Perform association rule mining using Apriori and FP-Growth algorithms.
- Build predictive models using classification and regression techniques.
- Apply clustering techniques (k-Means, DBSCAN, EM) to group datasets and interpret results.

Course Outcomes: After completion of the course, students should be able to

- Able to navigate WEKA and utilize default datasets for analysis.
- Efficiently preprocess datasets for data mining tasks.
- Generate meaningful association rules from datasets.
- Construct and evaluate classification and regression models.
- Perform clustering and interpret cluster characteristics for decision-making.

List of Experiments:

1. Basics of WEKA tool
 - a. Investigate the Application interfaces.
 - b. Explore the default datasets.
2. Pre-process a given dataset based on the following:
 - a. Attribute Selection
 - b. Handling Missing Values
3. Pre-process a given dataset based on the following:
 - a. Discretization
 - b. Eliminating Outliers
4. Create a dataset in ARFF (Attribute-Relation File Format) for any given dataset and perform Market-Basket Analysis.
5. Perform data preprocessing tasks and Demonstrate performing association rule mining on data sets
6. Generate Association Rules using the Apriori algorithm.
7. Generate Association Rules using the FP-Growth algorithm.

8. Demonstrate performing classification on data sets
9. Demonstrate performing clustering on data sets
10. Build a Decision Tree by using ID3 algorithm.
11. Build various Regression models.
12. Cluster the given dataset by using the k-Means Clustering algorithm and visualize the cluster mean values and standard deviation of dataset attributes.
13. Cluster the given dataset by using the DBSCAN Clustering algorithm.
14. Cluster the given dataset by using the Expectation Maximization clustering algorithm.

2476772: Business Intelligence Lab

B.Tech. IV Year I Sem.

L T P C

0 0 2 1

Course Overview

The Business Intelligence Lab provides hands-on exposure to data extraction, transformation, and loading (ETL), OLAP, data warehousing, and data analysis using tools such as SQL Server, Excel, and MDX queries. Students learn to design staging areas, cubes, and pivot reports, apply what-if analysis, and perform classification and clustering on datasets to support business decision-making. The lab bridges theoretical BI concepts with practical applications in real-world scenarios.

Prerequisites: Data Science Lab

Course Objectives:

- Import and integrate legacy data from multiple sources into a data warehouse.
- Perform ETL processes and design data staging areas for BI applications
- Create OLAP cubes (ROLAP, MOLAP, HOLAP) and execute MDX queries for data retrieval.
- Perform data visualization and reporting using Excel Pivot Tables, Pivot Charts, and What-if analysis.
- Apply data mining techniques such as classification and clustering for business insights.

Course Outcomes: After completion of the course, students should be able to

- Identify sources of Data for mining and perform data exploration
- Organize and prepare the data needed for data mining algorithms in terms of attributes and class inputs, training, validating, and testing files.
- Implement the appropriate data mining methods like classification, clustering or association mining on large data sets using open source tools like WEKA
- Apply various data mining algorithms from scratch using languages like Python/ Java etc.
- Evaluate and compare performance of some available BI packages

LIST OF EXPERIMENTS:

1. Tutorial on designing star and snowflake schema
2. Tutorials on Solving exercises in Data Exploration and Data Preprocessing
3. Import the legacy data from different sources such as (Excel, Sql Server, Oracle etc.) and load in the target system. (You can download sample database such as Adventure works, North wind, food mart etc.)
4. Perform the Extraction Transformation and Loading (ETL) process to construct the database in the Sql server.
5. a. Create the Data staging area for the selected database.
b. Create the cube with suitable dimension and fact tables based on ROLAP, MOLAP and HOLAP model.
6. Create the ETL map and setup the schedule for execution.
7. Execute the MDX queries to extract the data from the Data ware house.
8. Import the Data ware house data in Microsoft Excel and create the Pivot table

and Pivot Chart.

9. Import the cube in Microsoft Excel and create the Pivot table and Pivot Chart to perform data analysis.
10. Apply the what – if Analysis for data visualization. Design and generate necessary reports based on the data warehouse data.
11. Perform the data classification using classification algorithm.
12. Perform the data clustering using clustering algorithm.
13. Detailed case study of any one BI tool
14. Business Intelligence Mini Project: Each group assigned one new case study for this A BI report must be prepared outlining the following steps: a) Problem definition, identifying which data mining task is needed b) Identify and use a standard data mining dataset available for the problem. Some links for data mining datasets are: WEKA, Kaggle, KDD cup, Data Mining Cup, UCI Machine Learning Repository etc. c) Implement appropriate data mining algorithm d) Interpret and visualize the results e) Provide clearly the BI decision that is to be taken as a result of mining.

The BI tools such as Tableau / Power BI / BIRT / R / Excel or any other can be used.

2070025: HUMAN VALUES & PROFESSIONAL ETHICS

L	T	P	C
0	0	0	0

Prerequisite: Nil

Course Objectives:

- To make the students understand the types of roles they are expected to play in the society as practitioners of the civil engineering profession
- To develop some ideas of the legal and practical aspects of their profession.

Course Outcomes:

- To understand the importance of professional practice, Law and Ethics in their personal lives and professional careers.
- To learn the rights and responsibilities as an employee, team member and a global citizen

UNIT – I

Professional Practice and Ethics: Definition of Ethics, Professional Ethics - Engineering Ethics, Personal Ethics; Code of Ethics - Profession, Professionalism, Professional Responsibility, Conflict of Interest, Gift Vs Bribery, Environmental breaches, Negligence, Deficiencies in state-of-the-art; Vigil Mechanism, Whistle blowing, protected disclosures. Introduction to GST- Various Roles of Various Stake holders.

UNIT - II

Law of Contract: Nature of Contract and Essential elements of valid contract, Offer and Acceptance, Consideration, Capacity to contract and Free Consent, Legality of Object. Unlawful and illegal agreements, Contingent Contracts, Performance and discharge of Contracts, Remedies for breach of contract. **Contracts-II:** Indemnity and guarantee, Contract of Agency, Sale of goods Act -1930: General Principles, Conditions & Warranties, Performance of Contract of Sale.

UNIT – III

Arbitration, Conciliation and ADR (Alternative Dispute Resolution) system: Arbitration – meaning, scope and types – distinction between laws of 1940 and 1996; UNCITRAL model law – Arbitration and expert determination; Extent of judicial intervention; International commercial arbitration; Arbitration agreements – essential and kinds, validity, reference and interim measures by court; Arbitration tribunal appointment, challenge, jurisdiction of arbitral tribunal, powers, grounds of challenge, procedure and court assistance; Distinction between conciliation, negotiation, mediation and arbitration, confidentiality, resort to judicial proceedings, costs; Dispute Resolution Boards; Lok Adalats.

UNIT – IV

Engagement of Labour and Labour & other construction-related Laws: Role of Labour in Civil Engineering; Methods of engaging labour- on rolls, labour sub-contract, piece rate work; Industrial Disputes Act, 1947; Collective bargaining; Industrial Employment (Standing Orders) Act, 1946; Workmen's Compensation Act, 1923; Building & Other - Construction Workers (regulation of employment and conditions of service) Act (1996) and Rules (1998); RERA Act 2017, NBC 2017.

UNIT - V

Law relating to Intellectual property: Introduction – meaning of intellectual property, main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets; Law relating to Copyright in India including Historical evolution of Copy Rights Act, 1957, Meaning of copyright – computer programs, Ownership of copyrights and assignment, Criteria of infringement, Piracy in Internet – Remedies and procedures in India; Law relating to Patents under Patents Act, 1970

TEXT BOOKS:

1. Professional Ethics: R. Subramanian, Oxford University Press, 2015.
2. Ravinder Kaur, Legal Aspects of Business, 4e, Cengage Learning, 2016.

REFERENCES:

1. Wadhera (2004), Intellectual Property Rights, Universal Law Publishing Co. RERA Act, 2017

IV-II

24X0532: CLOUD COMPUTING

L T P C
3 0 0 3

Pre-requisites: Computer Networks, Operating System.

Course Objectives:

- To understand computing paradigms, cloud fundamentals, architecture, and management principles.
- To explore cloud deployment models, service models, and the technological drivers supporting cloud computing.
- To apply virtualization techniques and programming models such as MapReduce and Cloud Haskell for cloud-based software development.
- To analyze networking aspects of cloud computing including data center environments, transport layer issues, and cloud service providers.
- To evaluate security concerns and advanced concepts in cloud computing for research and industrial applications.

Course Outcomes: After completion of course, students should be able to

- Understand different computing paradigms and potential of the paradigms and specifically cloud computing
- Describe cloud service types, cloud deployment models and technologies supporting and driving the cloud
- Implement the knowledge of programming models for cloud and development of software application that runs the cloud and various services available from major cloud providers
- Analyze the security concerns and issues in cloud computing
- Acquire the knowledge of advances in cloud computing.

MODULE – I

[10]

Computing Paradigms, Cloud Computing Fundamentals, Cloud Computing Architecture and Management

MODULE – II

[10]

Cloud Deployment Models, Cloud Service Models, Technological Drivers for Cloud Computing: SOA and Cloud, Multicore Technology, Web 2.0 and Web 3.0, Pervasive Computing, Operating System, Application Environment

MODULE – III [10]
Virtualization, Programming Models for Cloud Computing: MapReduce,
Cloud Haskell, Software Development in Cloud

MODULE – IV [10]
Networking for Cloud Computing: Introduction, Overview of Data Center
Environment, Networking Issues in Data Centers, Transport Layer Issues
in DCNs, Cloud Service Providers

MODULE – V [8]
Security in Cloud Computing, and Advanced Concepts in Cloud
Computing

TEXT BOOK:

- 1.Chandra sekaran, K. Essentials of cloud computing. CRC Press, 2014

REFERENCE BOOKS:

- 1.Cloud Computing: Principles and Paradigms, Editors: Rajkumar Buyya, James Broberg, Andrzej M. Goscinski, Wiley, 2011
- 2.Enterprise Cloud Computing - Technology, Architecture, Applications, Gautam Shroff, Cambridge University Press, 2010
- 3.Cloud Computing Bible, Barrie Sosinsky, Wiley-India, 2010

Course outcomes: After successful completion of the course, students should be able to

- Implement fundamental image processing techniques used in computer vision.
- Use boundary tracking and region descriptors.
- Apply codes for Hough Transform (line, circle, ellipse).
- Analyze 3D vision techniques and implement motion-related methods.
- Develop computer vision applications.

Module-I: [10]

CAMERAS:-Pinhole Cameras

Radiometry :- Measuring Light in Space, Light Surfaces, Important Special Cases, Sources, Shadows, And Shading:- Qualitative Radiometry, Irradiance, The Irradiance Equation, Ideal Shading Models, Applications: Photometric Stereo, Interreflections: Global Shading Models

Color: The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image

Module-II [10]

Linear Filters : Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transform

Edge Detection: Noise, Estimating Derivatives, Detecting Edges

Texture: Representing Texture, Analysis and Synthesis Using Oriented Pyramids, Applications: Synthesizing Textures, Shape from Texture

Module-III: [8]

The Geometry of Multiple Views: Two Views

Stereopsis: Binocular Stereopsis, Multiple Baseline Stereo, Hierarchical Fusion, Using More Cameras

Segmentation by Clustering: Segmentation, Human Vision: Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction, Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Techniques

Module-IV: [10]

Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem

Tracking with Linear Dynamic Models Alignment: 2D and 3D, Problems of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Pose and Affine Projection Equations

Applications of Alignment: Last-Squares Parameter Estimation, Planning, Obstacle Avoidance and Control, Building Maps and Locating in them, Analytical Photogrammetry, An Application: Augmented Reality

Module-V:

[8]

Introduction to Robotics: Social Implications of Robots, Brief history of Robotics, Attributes of Robots, Application areas of Robots and well as future potential, Robot Mechanisms Architectures, Attributes of Reactive Paradigm, Subsumption Architecture, Potential fields and perceptual servoing

Common sensing techniques for Reactive Robots: Logical sensors, Behavioural Sensor Fusion, Pro- prioceptive sensors, Proximity Sensors, Topological Planning and Metric Path Planning

TEXTBOOKS:

24X6645: CYBER CRIME INVESTIGATION & DIGITAL FORENSICS

L T P C
3 0 0 3

Course Objectives:

- An introduction to the methodology and procedures associated with digital forensic analysis in a network environment.
- To understand the foundations of digital forensics, principles of digital evidence, and the role of computers in cybercrime.
- To explore digital investigation processes, methodologies, and scientific approaches for handling cybercrime scenes.
- To apply forensic techniques in analyzing digital evidence from violent crimes and reconstructing investigative scenarios.
- To analyze digital evidence from computer systems including Windows, Unix, and network environments.

Course Outcomes: After Completion of the course, students should be able to

- Understand the principles of digital forensics, digital evidence types, and cybercrime laws.
- Explain digital investigation models, crime scene handling, and preservation of digital evidence.
- Implement forensic procedures to extract, preserve, and analyze digital evidence from computers and networks.
- Analyze digital evidence in complex cases, including violent crimes, network incidents, and multi-system investigations.
- Evaluate digital forensic tools, methodologies, and legal frameworks to ensure admissible and reliable evidence.

MODULE – I

[10]

Foundations of Digital Forensics: Digital Evidence, Principles of Digital Forensics, Challenging aspects of Digital Evidence, The Role of computers in crime, Cyber Crime Law.

MODULE – II

[10]

Digital Investigations: Digital Investigation process models, Applying Scientific method in Digital Investigations, Handling a digital Crime scene: Fundamental Principles, Surveying and Preserving Digital Investigation.

MODULE – III

[10]

Violent Crime and Digital Investigation: The role of Computers in violent crime, Processing Digital crime scene, Investigative Reconstruction, Digital Evidence as Alibi.

MODULE – IV

[10]

Cyber stalking, Computer basics for Digital Forensics, Applying Forensics science to computers, Digital Evidence on windows systems, Digital Evidence on Unix systems.

MODULE – V

[8]

Network Forensics: Networks basics for Digital Investigators, Applying Forensics science to networks, Digital Evidence on physical and data link layers, Digital Evidence on Network and Transport layers.

TEXT BOOK:

1. Digital Evidence and computer Crime by Eoghan Casey Academic Press Third Edition.

REFERENCE BOOKS:

4. Handbook of Digital Forensics and Investigation, E. Casey, Academic Press, 2010.

2486706: EXPLORATORY DATA ANALYSIS

(Professional Elective)

B.Tech. IV Year II Sem.

L T P C
3 0 0 3

Course Overview

This course introduces the principles and techniques of **Exploratory Data Analysis (EDA)**, emphasizing data understanding, question formulation, and applying analytical models. Students learn to clean, visualize, and summarize data, explore relationships, validate findings, and use both formal and informal modeling to derive actionable insights. The course prepares students to systematically analyze data, refine expectations, and interpret results for decision-making in real-world applications.

Prerequisites: Data Analytics

Course Objectives:

- Understand the iterative process of analyzing data using the epicycle of analysis framework.
- Formulate and refine analytical questions and translate them into data problems.
- Apply exploratory data analysis techniques to inspect, visualize, and validate datasets.
- Explore data using models, examine relationships, and perform statistical inference.
- Apply formal modeling techniques for associational and predictive analysis

Course Outcomes: After completion of the course, students should be able to

- Understand Android OS architecture, application components, and activity lifecycle for building Android apps.
- Design and implement responsive Android UIs using layouts, UI components, event handling, and fragments.
- Apply intents, broadcast receivers, and notifications to enable inter-component communication.
- Implement file-based and shared preference storage to persist application data.
- Develop Android apps using SQLite databases and content providers for structured data management.

UNIT – I

[09 Periods]

Epicycles of Analysis: Setting the Scene, Epicycle of Analysis, Setting Expectations, Collecting Information, Comparing Expectations to Data, Applying the Epicycle of Analysis process.

UNIT – II

[09 Periods]

Stating and Refining the Question: Types of Questions, Applying the Epicycle to stating and Refining Your Question, Characteristics of good Question, Translating a Question into a Data Problem, Case Study.

UNIT- III

[10 Periods]

Exploratory Data Analysis: Formulate your question, read in your data, Checking Packaging, look at the top and bottom of the data, always be checking, validate with at least one External Source, make a plot, Try the Easy Solution First.

UNIT – IV**[10 Periods]**

Using Models to Explore your data: Models as Expectations, Reacting to Data Refining Our Expectations, Examining Linear Relationships, Stopping Criteria. Inference: Identify the population, Describe the sampling process, Describe the Model for the population, Factors Affecting the Quality of Inference, Case Study.

UNIT – V**[10 Periods]**

Formal Modeling: Goals of Formal Modeling, General Frame work, Associational Analysis, Prediction Analysis, and Summary

TEXT BOOK:

1. "The Art of Data Science: A Guide for Anyone Who Works with Data" by Roger D. Peng and Elizabeth Matsui.

REFERENCE BOOKS:

1. "Exploratory Data Analytics "by John Tukey.
2. "Python for Data Analysis "by Wes McKinney

2280542: Network Programming (Professional Elective - VI)

B.Tech. IV Year II Sem.

L T P C
3 0 0 3

Course Overview:

The purpose of this course is to provide an in-depth exploration of network communication principles, focusing on practical skills required to build, analyze, and deploy networked applications. Students will learn the foundations of inter-process and inter-system communication, including both local IPC mechanisms and internet-based protocols. The course emphasizes hands-on development using socket programming to create client-server applications using both TCP and UDP protocols.

Prerequisites: Computer Networks

Course Objectives:

- To understand the principles and mechanisms of inter-process communication (IPC) and inter-system communication in networked environments.
- To develop the ability to write socket-based programs using standard networking APIs.
- To design and implement robust client-server applications using TCP and UDP protocols.
- To analyze and troubleshoot network programs for performance, reliability, and scalability.
- To apply multicasting techniques for efficient data dissemination in group communication scenarios.

Course Outcomes: After completion of the course, students should be able to

- Understand inter process and inter-system communication
- Write socket API based programs
- Design and implement client-server applications using TCP and UDP sockets
- Analyze network programs
- Apply Multicasting

UNIT – I

[10 Periods]

Introduction to Network Programming: OSI model, Unix standards, TCP and UDP & TCP connection establishment and Format, Buffer sizes and limitation, standard internet services, Protocol usage by common internet application. Sockets: Address structures, value – result arguments, Byte ordering and manipulation function and related functions Elementary TCP sockets – Socket, connect, bind, listen, accept, fork and exec function, concurrent servers. Close function and related function.

UNIT – II

[09 Periods]

TCP client server: Introduction, TCP Echo server functions, Normal startup,

terminate and signal handling server process termination, Crashing and Rebooting of server host shutdown of server host. Elementary UDP sockets: Introduction UDP Echo server function, lost datagram, summary of UDP example, Lack of flow control with UDP, determining outgoing interface with UDP. I/O Multiplexing: I/O Models, select function, Batch input, shutdown function, poll function, TCP Echo server

UNIT – III

[10 Periods]

Socket options: getsockopt and setsockopt functions. Socket states, Generic socket option IPV6 socket option ICMPV6 socket option IPV6 socket option and TCP socket options. Advanced I/O Functions-Introduction, Socket Timeouts, recv and send Functions, readv and writev Functions, recvmsg and sendmsg Functions, Ancillary Data, How Much Data Is Queued?, Sockets and Standard I/O, T/TCP: TCP for Transactions.

UNIT – IV

[09 Periods]

Elementary name and Address conversions: DNS, gethost by Name function, Resolver option, Function and IPV6 support, uname function, other networking information. Daemon Processes and inetd Superserver – Introduction, syslogd Daemon, syslog Function, daemon_init Function, inetd Daemon, daemon_inetd Function Broadcasting- Introduction, Broadcast Addresses, Unicast versus Broadcast, dg_cli Function Using Broadcasting, Race Conditions Multicasting- Introduction, Multicast Addresses, Multicasting versus Broadcasting on A LAN, Multicasting on a WAN, Multicast Socket Options, mcast_join and Related Functions, dg_cli Function Using Multicasting, Receiving Mbone Session Announcements, Sending and Receiving, SNTP: Simple Network Time Protocol, SNTP (Continued)

UNIT – V

[10 Periods]

Raw Sockets-Introduction, Raw Socket Creation, Raw Socket Output, Raw Socket Input, Ping Program, Traceroute Program, An ICMP Message Daemon, Datalink Access- Introduction, BPF: BSD Packet Filter, DLPI: Data Link Provider Interface, Linux: SOCK_PACKET, libpcap: Packet Capture Library, Examining the UDP Checksum Field. Remote Login: Terminal line disciplines, Pseudo-Terminals, Terminal modes, Control Terminals, rlogin Overview, RPC Transparency Issues.

TEXT BOOKS:

1. UNIX Network Programming, by W. Richard Stevens, Bill Fenner, Andrew M. Rudoff, Pearson Education
2. UNIX Network Programming, 1st Edition, - W. Richard Stevens. PHI.

REFERENCE BOOKS:

1. UNIX Systems Programming using C++ T CHAN, PHI.
2. UNIX for Programmers and Users, 3rd Edition Graham GLASS, King abls, Pearson Education
3. Advanced UNIX Programming 2nd Edition M. J. ROCHKIND, Pearson Education

24X0528: WEB SECURITY

L T P C
3 0 0 3

Course Objectives:

- To give an Overview of information security
- Introduce the fundamentals of web security, risk analysis, cryptographic systems, protocols, and digital identification methods.
- Understand the concepts of access control for relational databases.
- Develop an understanding of privacy protection, server security, and web application security, along with best practices for safeguarding systems.
- Explore database security mechanisms, including access control models, trust management, and securing data warehouses/OLAP systems.

Course Outcomes: After completion of this course, students should be able to

- Understand how common mistakes can be bypassed and exploit the application
- Design the client side and service side programming
- Identify common application vulnerabilities
- Apply database access control models and assess trust management approaches for securing data warehouses and OLAP systems.
- Investigate future trends in database and web security, and propose privacy-preserving solutions for mobile and location-based environments.

MODULE – I

[10]

The Web Security, The Web Security Problem, Risk Analysis and Best Practices
Cryptography and the Web: Cryptography and Web Security, Working
Cryptographic Systems and Protocols, Legal Restrictions on Cryptography,
Digital Identification

MODULE – II

[10]

The Web's War on Your Privacy, Privacy-Protecting Techniques, Backups and
Antitheft, Web Server Security, Physical Security for Servers, Host Security for
Servers, Securing Web Applications

MODULE – III

[10]

Database Security: Recent Advances in Access Control, Access Control Models for XML, Database Issues in Trust Management and Trust Negotiation, Security in Data Warehouses and OLAP Systems

MODULE – IV

[10]

Security Re-engineering for Databases: Concepts and Techniques, Database Watermarking for Copyright Protection, Trustworthy Records Retention, Damage Quarantine and Recovery in Data Processing Systems, Hippocratic Databases: Current Capabilities.

MODULE – V

[8]

Future Trends Privacy in Database Publishing: A Bayesian Perspective, Privacy-enhanced Location Based Access Control, Efficiently Enforcing the Security and Privacy Policies in a Mobile Environment

TEXT BOOKS:

1. Web Security, Privacy and Commerce Simson G Arfinkel, Gene Spafford, O'Reilly.
2. Handbook on Database security applications and trends Michael Gertz, Sushil Jajodia

24X0540: BLOCKCHAIN TECHNOLOGY

L T P C
3 0 0 3

Prerequisites: cryptography and Network security, Computer Networks

Course Objectives:

- To learn the fundamentals of Blockchain and various types of block chain and consensus mechanisms.
- To understand the public block chain system, Private block chain system and consortium blockchain.
- Able to know the security issues of blockchain technology.
- Exploring cryptocurrency principles, Bitcoin, altcoins, tokens, and their usage in digital economy.
- Applying knowledge of public, private, and consortium blockchains for real-world problem-solving.

Course Outcomes: After completion of the course, students should be able to

- Understand concepts behind crypto currency
- Apply of smart contracts in decentralized application development
- Explain public, private, and consortium blockchain architectures with relevant use cases.
- Implement smart contracts and blockchain applications using Ethereum, Python, or Hyperledger Fabric.
- Analyze blockchain security, privacy, scalability, and performance challenges across domains.

MODULE – I

[10]

Fundamentals of Blockchain: Introduction, Origin of Blockchain, Blockchain Solution, Components of Blockchain, Block in a Blockchain, The Technology and the Future. Blockchain Types and Consensus Mechanism: Introduction, Decentralization and Distribution, Types of Blockchain, Consensus Protocol. Cryptocurrency – Bitcoin, Altcoin and Token: Introduction, Bitcoin and the Cryptocurrency, Cryptocurrency Basics, Types of Cryptocurrencies, Cryptocurrency Usage.

MODULE – II

[10]

Public Blockchain System: Introduction, Public Blockchain, Popular Public Blockchains, The Bitcoin Blockchain, Ethereum Blockchain.

Smart Contracts: Introduction, Smart Contract, Characteristics of a Smart Contract, Types of Smart Contracts, Types of Oracles, Smart Contracts in Ethereum, Smart Contracts in Industry.

MODULE – III

[10]

Private Blockchain System: Introduction, Key Characteristics of Private Blockchain, Need of Private Blockchain, Private Blockchain Examples, Private Blockchain and Open Source, E-commerce Site Example, Various Commands (Instructions) in E-commerce Blockchain, Smart Contract in Private Environment, State Machine, Different Algorithms of Permissioned Blockchain, Byzantine Fault, Multichain.

Consortium Blockchain: Introduction, Key Characteristics of Consortium Blockchain, Need of Consortium Blockchain, Hyperledger Platform, Overview of Ripple, Overview of Corda. Initial Coin Offering: Introduction, Blockchain Fundraising Methods, Launching an ICO, Investing in an ICO, Pros and Cons of Initial Coin Offering, Successful Initial Coin Offerings, Evolution of ICO, ICO Platforms.

MODULE – IV

[10]

Security in Blockchain: Introduction, Security Aspects in Bitcoin, Security and Privacy Challenges of Blockchain in General, Performance and Scalability, Identity Management and Authentication, Regulatory Compliance and Assurance, Safeguarding Blockchain Smart Contract (DApp), Security Aspects in Hyperledger Fabric.

Applications of Blockchain: Introduction, Blockchain in Banking and Finance, Blockchain in Education, Blockchain in Energy, Blockchain in Healthcare, Blockchain in Real-estate, Blockchain In Supply Chain, The Blockchain and IoT. Limitations and Challenges of Blockchain.

MODULE – V

[8]

Blockchain Case Studies: Case Study 1 – Retail, Case Study 2 – Banking and Financial Services, Case Study 3 – Healthcare, Case Study 4 – Energy and Utilities.

Blockchain Platform using Python: Introduction, Learn How to Use Python Online Editor, Basic Programming Using Python, Python Packages for Blockchain.

Blockchain platform using Hyperledger Fabric: Introduction, Components of Hyper ledger Fabric Network, Chain codes from Developer.ibm.com, Blockchain Application Using Fabric Java SDK.

TEXT BOOK:

1. "Blockchain Technology", Chandramouli Subramanian, Asha A. George, Abhilasj K A and Meena Karthikeyan, Universities Press.

REFERENCE BOOKS:

1. Michael Juntao Yuan, Building Blockchain Apps, Pearson, India.
2. Blockchain Blueprint for Economy, Melanie Swan, SPD O'reilly.
3. Blockchain for Business, Jai Singh Arun, Jerry Cuomo, Nitin Gaur, Pearson.

2486708: PARALLEL AND DISTRIBUTED COMPUTING
(Professional Elective)

B.Tech. IV Year II Sem.

L T P C
3 0 0 3

Course Overview

This course introduces the principles of Parallel and Distributed Computing, covering system architectures, algorithms, resource management, networking, and multimedia applications. Students learn parallel models, programming environments, operating systems support, and parallel database systems. The course prepares students to design, implement, and analyze scalable, efficient, and high-performance parallel and distributed applications for scientific and multimedia computing.

Prerequisites: Distributed Systems

Course Objectives:

- To learn core ideas behind parallel and distributed computing.
- To explore the methodologies adopted for parallel and distributed environments.
- To understand the networking aspects of parallel and distributed computing.
- To provide an overview of the computational aspects of parallel and distributed computing.
- To learn parallel and distributed computing models.

Course Outcomes: After completion of the course, students should be able to

- Explore the methodologies adopted for parallel and distributed environments.
- Analyze the networking aspects of Distributed and Parallel Computing.
- Evaluate the different performance issues and tasks in parallel and distributed computing.
- Tools usage for parallel and distributed computing.
- Understand high performance computing techniques.

UNIT – I

[10 Periods]

Parallel and Distributed Computing— Introduction- Benefits and Needs- Parallel and Distributed Systems- Programming Environment- Theoretical Foundations- Parallel Algorithms— Introduction- Parallel Models and Algorithms- Sorting- Matrix Multiplication

UNIT – II

[09 Periods]

Architecture of Parallel and Distributed Systems, Parallel Operating Systems.

UNIT – III

[10 Periods]

Management of Resources in Parallel Systems- Parallel Database Systems and Multimedia Object Servers.

UNIT – IV

[09 Periods]

Networking Aspects of Distributed and Parallel Computing- Process- Parallel and Distributed Scientific Computing.

UNIT – V

[10 Periods]

Multimedia Applications for Parallel and Distributed Systems

TEXT BOOK:

1. Jacek Błażewicz, et al., "Handbook on parallel and distributed processing", Springer Science & Business Media, 2013.
